PRESENTATION OF FINANCIAL AND OTHER INFORMATION

In this annual report on Form 20-F (“**Annual Report**”), references to “pesos” or “Ps.” are to Argentine pesos, and references to “U.S. dollars”, “dollars” or “US\$” are to United States dollars. A “billion” is a thousand million. References to “m³” are to cubic meters. References to “cf” are to cubic feet, to “MMcf” are to millions of cubic feet, to “Bcf” are to billions of cubic feet, to “d” are to day and to “HP” are to horsepower.

Financial Statements

The audited consolidated financial statements included in this Annual Report (our “**Financial Statements**”) have been prepared in accordance with accounting principles generally accepted in Argentina (“**Argentine GAAP**”) and the requirements of Argentina’s *Comisión Nacional de Valores* (the “**CNV**”), which differ in certain significant respects from accounting principles generally accepted in the United States (“**US GAAP**”). Such differences involve methods of measuring the amounts shown in the Financial Statements, as well as additional disclosures required by US GAAP and Regulation S-X of the Securities and Exchange Commission (“**SEC**”). For a description of the principal differences between Argentine GAAP and US GAAP see Note 12 to our Financial Statements. Our Financial Statements as of and for the years ended December 31, 2010, 2009, 2008 and 2007 were audited by Sibille (“**KPMG**”), the Argentine member firm of the KPMG network of independent member firms affiliated with KPMG International Cooperative, a Swiss entity and independent registered public accounting firm, and as of and for the year ended December 31, 2006 was audited by Price Waterhouse & Co S.R.L., Buenos Aires, Argentina (“**Price**”), a member firm of PricewaterhouseCoopers, an independent registered public accounting firm. The report of KPMG, dated June 16, 2011, related to our Financial Statements is included in this Annual Report.

Our Board of Directors decided to engage KPMG in the role of independent accountant, commencing with year 2007. The initial appointment of KPMG as independent accountant was approved by our Shareholders at a meeting held on April 12, 2007.

As discussed in Note 2(b) to our Financial Statements, we have complied with CNV resolutions and accordingly ceased recording the effects of inflation beginning on February 28, 2003. Since Argentine GAAP required companies to discontinue inflation accounting only as of October 1, 2003, the application of the CNV resolution represented a departure from Argentine GAAP. However, due to the low level of inflation rates during the period from March 2003 to September 2003, such a departure has not had a material effect on our Financial Statements.

Other Information

Unless otherwise specified, all exchange rate information contained in this Annual Report has been derived from information published by *Banco de la Nación Argentina S.A.* (“**Banco Nación**”), without any independent verification by us.

Certain amounts shown in this Annual Report are subject to rounding. Accordingly, figures shown as totals in certain tables may not be an exact arithmetic aggregate of the other figures in such table.

References to “we”, “us” and “our” mean Transportadora de Gas del Sur S.A. (“**TGS**”) and its consolidated subsidiary, Telcosur S.A. (“**Telcosur**”).

CAUTIONARY STATEMENT REGARDING FORWARD-LOOKING STATEMENTS

Some of the information in this Annual Report, including information incorporated by reference herein, may constitute forward-looking statements within the meaning of the United States Private Securities Litigation Reform Act of 1995, as amended. These forward-looking statements can be identified by the use of forward-looking terminology such as “may,” “will,” “will likely result,” “intend,” “projection,” “should,” “believe,” “expect,” “anticipate,” “estimate,” “continue,” “plan” or other similar words. These statements discuss future expectations, contain projections of results of operations or of financial condition or state other forward-looking information. Forward-looking statements are subject to various risks and uncertainties. When considering forward-looking statements, you should keep in mind the factors described in “Item 3. Key Information—Risk Factors” and other cautionary statements appearing in “Item 5. Operating and Financial Review and Prospects”. These factors and statements, as well as other statements contained herein, describe circumstances that could cause actual results to differ materially from those contained in any forward-looking statement.

Forward-looking statements include but are not limited to the following:

- statements regarding changes in general economic, business, political or other conditions in Argentina;
- estimates relating to future tariffs and prices for our transportation services and future prices and volumes of our natural gas liquids (“**liquids**”) and for products and services in our other non-regulated business;
- statements regarding expected future political developments in Argentina and expected future developments regarding our license to provide gas transportation services through the exclusive use of the southern gas transportation system in Argentina (the “**License**”), the renegotiation process at the Unit for Renegotiation and Assessment of Utilities Contracts (“**UNIREN**”), regulatory actions by *Ente Nacional Regulador del Gas* (“**ENARGAS**”) and any other governmental authorities that may affect us and our business;
- risk and uncertainties with respect to labor relations in Argentina;
- statements and estimates regarding future pipeline expansion and the cost of, or return to us from, any such expansion; and
- estimates of our future level of capital expenditures, including those required by ENARGAS and other Argentine governmental authorities.

The following important factors could cause actual results to differ materially from any results projected, forecasted, estimated or budgeted by us in our forward-looking statements:

- the impact of the Public Emergency Law No. 25,561 (the “**Public Emergency Law**”) enacted by the Argentine government in January 2002, which resulted in the amendment of the Convertibility Law No. 23,928 and Decree No. 529/01 (collectively, the “**Convertibility Law**”) and related laws and regulations;
- risks and uncertainties related to changes in the peso-U.S. dollar exchange rate and the Argentine domestic inflation rate, which may materially adversely affect our revenues, expenses and reported financial results;
- risks and uncertainties associated with our non-regulated business, including those related to international and local prices of liquids, taxes and other restrictions imposed on liquids exports, our ability to renegotiate our agreements with customers and possible increased regulation of the liquids industry in the future by the Argentine government;
- risks and uncertainties resulting from government regulations that affect our business or financial condition or results of operations, such as the prohibition on tariff increases, restrictions on payments abroad and exchange controls;
- risks and uncertainties associated with unscheduled and unexpected expenditures for the repair and maintenance of our fixed or capital assets or expenditures required or otherwise mandated or initiated by ENARGAS or other Argentine governmental authorities for the expansion of our pipeline system or other purposes, including the risk that we may effectively be forced to make investments or take other actions that may not be as commercially attractive as other actions;
- risks and uncertainties resulting from the prospect of additional Argentine government regulation or other Argentine governmental involvement in our business;
- developments in legal and administrative proceedings involving us and our affiliates;
- changes to or revocation of our License; and
- risks and uncertainties impacting us as a whole, including changes in general economic conditions, changes in Argentine laws and regulations to which we are subject, including tax, environmental and employment laws and regulations, and the cost and effects of legal and administrative claims and proceedings against us.

Our actual results may differ materially from the results anticipated in these forward-looking statements because such statements, by their nature, involve estimates, assumptions and uncertainties. The forward-looking statements contained in this Annual Report speak only as of the date of this Annual Report, and we do not undertake any obligation to update any forward-looking statement or other information to reflect events or circumstances occurring after the date of this Annual Report or to reflect the occurrence of unanticipated events.

PART I

Item 1. Identity of Directors, Senior Management and Advisers

Not applicable.

Item 2. Offer Statistics and Expected Timetable

Not applicable.

Item 3. Key Information

A. Selected Financial Data

The following selected consolidated financial data is derived from our Financial Statements as of and for the years ended December 31, 2010, 2009, 2008, 2007 and 2006. This information should be read in conjunction with and is qualified in its entirety by reference to our Financial Statements, including the independent accountant's reports thereon and the notes related thereto, and the discussion in "Presentation of Financial and Other Information" and "Item 5. Operating and Financial Review and Prospects" included elsewhere in this Annual Report.

For important information relating to our Financial Statements, including information relating to the preparation and presentation of the audited consolidated Financial Statements and the following selected financial data, see "Presentation of Financial and Other Information" above.

As of and for the year ended December 31,

	2010	2009	2008	2007	2006
	(in thousands of pesos, except per share and per ADS amounts and common stock or as otherwise indicated)				
Statement of Income Data:

Net income per ADS ⁽²⁾	1.42	0.84	1.31	1.38	2.55

(1) Includes Ps. 550,972; Ps. 669,440; Ps. 506,302; Ps. 509,501 and Ps. 491,996 of gas transportation net revenues and Ps. 1,102,029; Ps. 931,208; Ps. 912,900; Ps. 747,772 and Ps. 817,506 of liquids production and commercialization and other services net revenues for the years ended December 31, 2010, 2009, 2008, 2007 and 2006, respectively.

(2) Net income per share under Argentine GAAP and US GAAP have been calculated using the weighted average shares outstanding. Each American Depositary Share ("ADS") represents five shares.

(3) Represents additions to property, plant and equipment. For more information, see Note 3 (Consolidated Business Segment Information) to our Financial Statements, included elsewhere herein.

Dividends

Dividends may be lawfully declared and paid only out of our retained earnings reflected in our annual Financial Statements and must be approved by a Shareholders' Meeting as described below. Since 2006, we have paid dividends in the amount of Ps. 32.0 million in May 2008, Ps. 30.0 million in April 2009, Ps. 30.3 million in April 2010 and Ps. 976.0 million in May 2011.

Our Board of Directors regularly submits our Financial Statements for the preceding year, together with reports thereon by the Supervisory Committee, to the Shareholders at the Annual Ordinary Shareholders' Meeting for approval. Under the Argentine Commercial Companies Law No. 19,550 (the "**Commercial Companies Law**"), this Ordinary Shareholders' Meeting must be held to approve the Financial Statements and determine the allocation of our net income for such year. Under the Commercial Companies Law, the Shareholders are required to allocate a legal reserve equal to at least 5% of each year's net income, as long as there is no unappropriated retained deficit. If there is such a retained deficit, 5% should be calculated on any excess of the net income over the unappropriated retained deficit. This allocation is only legally required until the aggregate amount of such reserve equals 20% of the sum of (i) "Common stock nominal value" plus (ii) "Cumulative inflation adjustment to common stock", as shown on our Consolidated Statement of Changes in Shareholders' Equity (the "**Adjusted Common Stock Nominal Value**"). However, if the aggregate legal reserve falls below 20% of the Adjusted Common Stock Nominal Value, we must restore the legal reserve before paying any dividends. The amount represented by the legal reserve is not available for distribution as dividends. At the Ordinary Shareholders' Meeting held on April 29, 2011, our shareholders approved an increase in the legal reserve by Ps. 5.1 million to Ps. 213.4 million, which represents 11.00% of the Adjusted Common Stock Nominal Value. Under our By-laws, after the allocation to the legal reserve has been made, an amount will be allocated to pay dividends on preferred stock, if any, and an amount equal to 0.25% of the net income for the year will be allocated to pay the participation in earnings of employee profit-sharing certificates. The remainder of the retained earnings for the year may be distributed as dividends on common stock or retained as a voluntary reserve, as determined at the Shareholders' Meeting. Dividend payment process must be initiated within 30 days of their declaration and it must be completed within 10 business days after its initiation. For information on dividend taxation, see "Item 10. Additional Information—E. Taxation—Argentine Taxes."

Our existing debt instruments impose additional restrictions on our ability to pay dividends on our ordinary shares. We may pay dividends as long as (i) no default exists under our debt obligations and (ii) immediately after giving effect to such dividend payment, (a) the consolidated coverage ratio (ratio of our consolidated adjusted EBITDA to our consolidated interest expense (each as defined in our new debt obligations issued on May 14, 2007 (the "**New Debt Obligations**"))) would be greater than or equal to 2.0:1; and (b) the consolidated debt ratio (ratio of our consolidated total indebtedness to our consolidated adjusted EBITDA (as each of the terms is defined in the New Debt Obligations)) would be less or equal to 3.75:1 (see "Item 10. Additional Information—C. Material Contracts—New Debt Obligations").

During a given fiscal year, our Board of Directors may declare interim dividends, in which case the members of the Board of Directors and of the Supervisory Committee are jointly and severally liable for such distribution, if such declaration is not in accordance with the Commercial Companies Law, as amended and our By-laws.

Exchange Rate Information

Fluctuations in the exchange rate between pesos and U.S. dollars would affect the U.S. dollar equivalent of the peso price of our Class B Shares on the Buenos Aires Stock Exchange ("**BASE**") and, as a result, would likely affect the market price of our ADSs as well. In addition, such fluctuations will affect the dollar equivalent of peso amounts reported in this Annual Report. Currency fluctuations would also affect the U.S. dollar amounts received by holders of ADSs on conversion by the Bank of New York Mellon (the "**Depositary**"), pursuant to our depositary agreement of cash dividends paid in pesos on the underlying Class B Shares.

The following table sets forth, for the periods indicated, high, low, average and period-end exchange rates between the peso and the U.S. dollar, as reported by Banco Nación. The Federal Reserve Bank of New York does not publish a noon buying rate for the peso. The average rate is calculated by using the average of Banco Nación reported exchange rates on each day during the relevant monthly period and on the last day of each month during the relevant annual period.

	Pesos per U.S. dollar			Period end
	High	Low	Average	
Most recent six months:				
December, 2010.....	3.9840	3.7920	3.9768	3.9760
January, 2011.....	4.0080	3.9720	3.9826	4.0080
February, 2011.....	4.0300	4.0090	4.0223	4.0300
March, 2011.....	4.0540	4.0280	4.0374	4.0540
April, 2011.....	4.0850	4.0500	4.0661	4.0800
May, 2011.....	4.0900	4.0780	4.0838	4.0900
June, 2011 (through June 15).....	4.0940	4.0890	4.0917	4.0940
Year ended December 31,

2008.....	3.4530	3.0140	3.1586	3.4530
2009.....	3.8540	3.4490	3.7318	3.8000
2010.....	3.9880	3.7940	3.9129	3.9760

For your convenience and except as we specify otherwise, this Annual Report contains translations of peso-denominated amounts to U.S. dollars at the reported exchange rate on December 31 of each year. These translations should not be construed as representations that the amounts actually represent such U.S. dollar amounts or could be or have been converted into U.S. dollars at the rates indicated or at any other rates. On June 15, 2011, the reported exchange rate was Ps. 4.094=US\$1.00.

Our results of operations and financial condition are highly susceptible to changes in the peso-U.S. dollar exchange rate because more than Ps. 500 million of our annual revenues are peso-denominated and our primary assets are based in Argentina while substantially all of our liabilities and capital expenditures are U.S. dollar-denominated.

B. Capitalization and Indebtedness

Not applicable.

C. Reasons for the Offer and Use of Proceeds

Not applicable.

D. Risk Factors

You should carefully consider the following risks and uncertainties, and any other information appearing elsewhere in this Annual Report. The risks and uncertainties described below are intended to highlight risks and uncertainties that are specific to us. Additional risks and uncertainties, including those generally affecting Argentina and the industry in which we operate, risks and uncertainties that we currently consider immaterial or risks and uncertainties generally applicable to similar companies in Argentina may also impair our business, results of operations, the value of our securities, and our ability to meet our financial obligations.

The information in this Risk Factors section includes forward-looking statements that involve risks and uncertainties. Our actual results could differ materially from those anticipated in these forward-looking statements as a result of numerous factors, including those described in "Cautionary Statement Regarding Forward-Looking Statements" above.

Risks Relating to Argentina

Overview

We are a sociedad anónima and all of our operations and operating assets are located in Argentina. More than Ps. 500 million of our annual revenues are peso-denominated for the years ended December 31, 2010, 2009 and 2008. Conversely, all of our indebtedness and most of our capital expenditures are U.S. dollar-denominated. Accordingly, our financial condition and results of operations depend to a significant extent on economic,

regulatory and political conditions prevailing in Argentina, the exchange rate between the peso and the U.S. dollar and the reference international prices of propane and butane (“LPG”) and natural gasoline.

Political and economic instability in Argentina have adversely affected, and may continue to adversely affect, our financial condition and results of operations.

Fluctuations in the Argentine economy have adversely affected, and may continue to adversely affect Argentine entities, including us. Specifically, we have been adversely affected and may continue to be adversely affected by inflation, interest rates, the value of the peso against foreign currencies, price controls and business and tax regulations.

The Argentine economy has experienced significant volatility in recent decades, characterized by periods of low or negative growth, high and variable levels of inflation, and currency devaluation. During 2001 and 2002, Argentina went through a period of severe political and economic crisis. The crisis had significant and adverse consequences on our company, including (i) losses derived from the effects of the peso devaluation on us and our net borrowing position, substantially all of which was denominated in U.S. dollars, (ii) the pesification, at a rate of Ps. 1 to US\$1, of our U.S. dollar-denominated gas transportation tariffs, (iii) our default on our financial indebtedness and (iv) the elimination of tariff adjustments for public utilities based on non-Argentine indexes or other indexation methods. From 2003 until the third quarter of 2008, the Argentine economy experienced a significant recovery and growth. Beginning in the third quarter of 2008, the Argentine economy was negatively impacted by the international economic crisis. Since 2010 the Argentine economy has been recovering as a result of the monetary expansion policy carried out by the developed countries and the continued growth experienced by China, which is an important export market for Argentina.

In December 2008, the Argentine government enacted a law pursuant to which approximately Ps. 94.4 billion (US\$29.3 billion) in assets held by the country’s ten private *Administradoras de Fondos de Jubilaciones y Pensiones* (pension fund management companies, or “AFJPs”) were transferred to the government-run social security agency (“ANSES”), resulting in a decline in liquidity in the local capital markets, which may further limit the sources of financing for Argentine companies, including us. In April 2011, a presidential decree eliminated the 5% limit on voting rights for stock owned by ANSES, thereby expanding the Argentine government’s influence in key industries such as energy, telecommunications, finance and transport, among others.

We cannot provide any assurance that future economic, social and political developments in Argentina, over which we have no control, will not adversely affect our financial condition or results of operations.

Fluctuations in the value of the peso may adversely affect the Argentine economy and our financial condition, results of operations and ability to service our debt.

Since the end of U.S. dollar-peso parity in January 2002 under the Public Emergency Law, the peso has fluctuated significantly in value. As a result, the Argentine Central Bank (“BCRA”) has taken several measures to stabilize the exchange rate and preserve its reserves. The marked devaluation of the peso in 2002 had a negative impact on the ability of the Argentine government and Argentine companies, including us, to honor their foreign currency-denominated debt, led to very high inflation initially and had a negative impact on businesses whose success is dependent on domestic market demand, including public utilities.

The significant peso devaluation during 2002 adversely affected our results and financial position. All of our financial debt is denominated in U.S. dollars. Before the enactment of the Public Emergency Law, our cash flow, generally denominated in U.S. dollars or dollar-adjusted, provided a natural hedge against exchange rate risks. The Argentine regulatory framework after the enactment of the Public Emergency Law, however, limited our ability to mitigate the impact of the peso devaluation. Particular aspects of the regulatory framework that adversely affected us included the pesification of our tariffs at a rate of Ps. 1 to US\$1 compared with an exchange rate, as of May 31, 2011, of Ps. 4.090 to US\$1, regulatory issues related to the renegotiation of our tariffs, new taxes and other restrictions on exports of LPG and gas supply.

If the peso devalues significantly, all of the negative effects on the Argentine economy related to such devaluation could recur, with adverse consequences to our business. On the other hand, a substantial increase in the value of the peso against the U.S. dollar also presents risks for the Argentine economy since it may lead to a deterioration of the country’s current account balance and the balance of payments.

We are unable to predict whether, and to what extent, the value of the peso may further depreciate or appreciate against the U.S. dollar and how any such fluctuations would affect the demand for our products and services. Moreover, we cannot assure you that the Argentine government will not make regulatory changes that prevent or limit us from offsetting the risk derived from our exposure to the U.S. dollar and, if so, what impact these changes will have on our financial condition and results of operations.

Because substantially all of our indebtedness is and will continue to be U.S. dollar-denominated, any future devaluation of the peso will negatively affect our revenues expressed in U.S. dollars while increasing the relative cost, in peso terms, of expenses and other financial obligations denominated in foreign currencies, thereby decreasing our cash-generating ability and having a material adverse effect on our liquidity and our ability to service our debt.

At May 31, 2011, the total amount of principal and interest under our consolidated U.S. dollar-denominated indebtedness was the equivalent of US\$375.2 million.

Substantial inflation has occurred since the repeal of the Convertibility Law and could continue in the future, resulting in a material adverse effect on our results of operations and financial condition.

In the past, inflation has undermined the Argentine economy and the government’s ability to stimulate economic growth. Argentina experienced significant inflation in 2002, with cumulative changes in the Consumer Price Index (“CPI”) of 42.8% and in the Wholesale Price Index (“WPI”) of 118.2%. This level of inflation reflected both the effect of the peso devaluation on production costs as well as a substantial modification of relative prices, partially offset by the elimination of public utility rate (“tariff” or “rate”) adjustments and the large drop in demand resulting from the severe recession.

During 2006 to 2010, Argentina experienced increases in the CPI and WPI that reflected the continued increase in private consumption and in levels of economic activity, which applied upward pressure on the demand for goods and services. The rate of inflation evolved as follows:

	December 31,				
	2010	2009	2008	2007	2006
	<i>(annual % change)</i>				
WPI.....	14.8	10.0	8.8	14.4	7.2
CPI.....	10.5	7.7	7.2	8.5	9.8

At the end of January 2007, the *Instituto Nacional de Estadística y Censos* (“INDEC”), which is statutorily the only institution in Argentina with the power to produce official nationwide statistics, experienced a process of institutional reforms, following which some private analysts have materially disagreed with the official inflation data (and other economic data affected by inflation data, such as poverty and Gross Domestic Product (“GDP”) estimates) published by INDEC.

The unpredictability of Argentina’s inflation rate makes it impossible for us to foresee how our business and results of operations may be affected in the future by inflation. Continued inflation in Argentina without a significant increase in our tariffs would have a material adverse effect on our business, results of operations and financial condition.

Argentina’s ability to stimulate sustained economic growth, appease social unrest and repay its debt may depend on external financial assistance and the Argentine government’s access to international capital markets, which has been limited and may continue to be limited in the future.

In 2001, as a result of the suspension of lending arrangements with Argentina by the International Monetary Fund (“IMF”) and Argentina’s default on approximately US\$65.4 billion of its then-outstanding sovereign debt, international rating agencies downgraded the rating of Argentina’s sovereign debt to default status. The Argentine government launched a process to restructure its sovereign debt on January 14, 2005, and, on March 18, 2005, announced that 76.15% of its bondholders had accepted the restructuring offer. The Argentine government issued new bonds to the accepting holders in April 2005 and paid overdue interest accrued from December 2003. In addition, on December 15, 2005, the Argentine government announced the early payback of its debt to the IMF, and on January 3, 2006, a disbursement was made by the Argentine government for an amount of US\$9.5 billion. In 2010, the Argentine government made a new offer to exchange new bonds

and cash for defaulted bonds held by creditors who had not accepted the exchange offer made in 2005, which permitted Argentina to restructure the 66% of the remaining defaulted debt.

Several legal actions have been filed in the U.S., Italy and Germany by holders of Argentina's sovereign debt who did not participate in either restructuring. A judgment against the Argentine government in such cases could result in a reduction in funding sources and investment capital, which could have a significant effect on the Argentine government's ability to stimulate sustained economic growth.

Due to its efforts, the Argentine government has been able to reduce external debt levels and improve its debt maturity profile. In recent years, Argentina has based its debt-management strategy on replacing market debt by intragovernmental debt. This strategy has reduced rollover risk in the next two years and eased liquidity pressures, though it may not address longer-term fiscal pressures.

In addition, the Argentine government has been trying to negotiate with the Club of Paris in order to restructure its defaulted debt of more than US\$6 billion.

There can be no assurance that the Argentine government will not default on its debt obligations in the future. Such a default would limit the sources of financing available for Argentine companies, including us.

The BCRA has imposed restrictions on the transfer of funds outside of Argentina in the past and may do so in the future, which could prevent us from making payments on our foreign currency-denominated indebtedness.

Since the amendment of the Convertibility Law in December 2001, the Argentine government has imposed several temporary restrictions on the transfer of U.S. dollars outside of Argentina. Prior to January 2003, we were required to obtain the prior approval of the BCRA before we could transfer U.S. dollars outside Argentina to make payments of dividends and principal and interest on our debt obligations. Although current regulations do not require prior BCRA approval for these of payments, the BCRA may reinstate transfer of funds restrictions at any time. In such case, we cannot assure you that the BCRA will approve the transfer of funds outside Argentina for payments required under the terms of our foreign currency-denominated indebtedness. In addition, there may be a significant delay before payments required under the terms of our foreign currency-denominated indebtedness may be made.

We cannot assure you as to how long the current, more flexible regulations will be in effect or whether they will become more restrictive again in the future. If the Argentine government decides once again to tighten the restrictions on the transfer of funds, we may be unable to make dividend payments and principal or interest payments on our debt when they become due, which could have a material adverse effect on us.

The Argentine financial market and economy may be adversely affected by the economic and financial global crisis

In 2008, the economy of the United States of America entered into a recession in part as a result of the mortgage market crisis. This financial crisis quickly spread to other developed countries, affecting (i) their financial markets through the steep decline in financial assets prices (including oil and other commodities) and (ii) their real economies, generating recessions and unemployment rate increases. The Argentine economy showed signs of weakness: a significant fall in both trade and fiscal surpluses; lower economic activity; workforce suspensions and dismissals; and local currency devaluation.

However, since 2009, economic conditions have showed signs of improvement in Argentina driven principally by higher agricultural commodity prices and the growth of some industries.

In 2010 the global economy continues to recover unevenly, with most emerging economies expanding faster than advanced economies. In many emerging economies, including Argentina, the recovery has been much faster than in Europe or the United States.

Although many analysts believe the risk of a double-dip recession in the United States has receded, Europe remains vulnerable and new risks have emerged. New uncertainties about oil supply have led to a sharp increase in oil prices, which would slow global growth and in turn push down prices of other commodities, including those exported by Argentina. The absence of a well-defined medium-term fiscal adjustment plan in the United States could put upward pressure on U.S. interest rates and tighten global financial conditions.

There can be no assurance about the duration and depth of this international economic crisis and if it will continue to adversely affect the Argentine economy.

Because the Argentine standards for corporate disclosure and accounting differ from those of the United States, information about us may not be as detailed or comprehensive as that of non-Argentine companies, including that of companies in the United States.

We are subject to the periodic reporting requirements of the Securities Exchange Act of 1934, as amended (“**Exchange Act**”). However, the periodic disclosure required of foreign issuers under the Exchange Act is more limited than the periodic disclosure required of companies in the United States. Furthermore, there is less extensive regulation of the Argentine securities markets and of the activities of investors in such markets as compared with the securities markets in the United States and certain other developed countries. We prepare our Financial Statements in accordance with Argentine GAAP and the regulations of the CNV, which differ in certain significant respects from US GAAP. See Note 12 to our Financial Statements for a description of the material differences between Argentine GAAP and US GAAP as they relate to us and for a quantification of the impact of those differences on net income for the year and our Shareholders’ equity.

Risks Relating to Our Business

Because we receive a significant portion of our net revenues from public service contracts, which tariffs are no longer stated in dollars or subject to indexing, our net revenues and liquidity have been harmed as a result of inflation and the devaluation of the peso.

All of our net revenues from our gas transportation segment (which represented approximately 33% and 42% of total net revenues during 2010 and 2009, respectively) are attributable to public service contracts, which are subject to Argentine government regulation. We entered into these public service contracts primarily with natural gas distribution companies in connection with the privatization of Gas del Estado S.E. (“**GdE**”) in 1992. Prior to the passage of the Public Emergency Law, our tariffs were stated in U.S. dollars and subject to indexing, based on semi-annual changes in the U.S. Producer Price Index (“**PPPI**”), with adjustments every five years, based on the efficiency of, and investments in, our gas transportation operations. The Public Emergency Law, however, eliminated tariff indexation. In accordance with the Public Emergency Law, in January 2002, public service tariffs were converted into pesos and fixed at an exchange rate of Ps. 1.00=US\$1.00 even as the peso was allowed to devalue against the U.S. dollar.

In July 2003, UNIREN was created under the joint jurisdiction of the Ministry of Economy and Production and the Ministry of Federal Planning and Public Investment and Utilities (“**MPFIPyS**”) in order to renegotiate public service contracts, including the tariffs charged in those contracts. Little progress has been made to date in our renegotiation process with UNIREN. On October 9, 2008, we signed a transitional agreement with the UNIREN that contemplated a tariff increase of 20%, which is retroactively applicable to September 1, 2008. According to this agreement, the funds generated by this tariff increase would be temporarily deposited in a trust fund until we need them to carry out an investment plan for improvements in our pipeline system. However, as the tariff increase has not been granted yet, the entire investment plan has been executed with our funds.

On December 3, 2009, the Executive Branch ratified this transitional agreement through the Presidential Decree No. 1,918/09. By means of this Decree, we will be able to bill the tariff increase to our clients as soon as ENARGAS publishes the new tariff schedule and sets the methodology to bill the retroactive effect. However, ENARGAS has not carried out these duties and due to this delay, in August 2010, we requested ENARGAS authorization to issue the tariff schedule including the 20% transitory tariff increase and the retroactive collection methodology, and application of an interest rate in line with the established method of payment. ENARGAS responded to us that they had submitted the records and the tariff project to the Coordination and Management Control Under Secretariat (“**SCyCG**”), which is under the scope of the MPFIPyS, based on the Resolution No. 2000/2005 of the MPFIPyS.

On September 30, 2010, we filed an *acción de amparo* (a summary proceeding to guarantee constitutional rights) against ENARGAS and the SCyCG in order to obtain the implementation of the new tariff increase schedule. On October 25, 2010, ENARGAS and the SCyCG provided the information required by the Judge on October 19, 2010. On November 8, 2010 we were served notice of the judgment that upheld the injunction filed by us. Said judgment orders the SCyCG to return to ENARGAS -within a two-day period- the documents remitted by ENARGAS in connection with the tariff schedule applicable to us under Decree No. 1,918/09; and orders ENARGAS -within two days following reception of said documents- to set the tariff

schedule and the retroactive collection methodology. ENARGAS and the SCyCG filed an appeal against the judgment that upheld the *acción de amparo* filed by us.

Moreover, on November 16, 2010, we received an invitation from the UNIREN in order to move forward with the renegotiation of the License Agreement within the scope and in the terms of the Public Emergency Law, to which end the UNIREN requires the suspension of claims, appeals, or administrative or judicial action taken against the Argentine Government in connection with or arising from the Renegotiation Process of remuneration under the License Agreement. On November 18, 2010, we decided to authorize the suspension of the *acción de amparo* mentioned above for a twenty- working-day period automatically renewable at the expiration of said term (unless the Board before or at the expiration of each period decides not to renew it) in order to move forward with the renegotiation of the License Agreement. On December 28, 2010, we requested ENARGAS and the MPFIPyS to join our request to suspend the *acción de amparo*, and as of the date of this Annual Report, we have not received any favorable response in this matter.

On April 5, 2011, the Second Chamber of the Court of Appeals in administrative federal matters set a 60 business day term for the SCyCG to act according to the provisions of Resolution No. 2000/2005 and return to ENARGAS the documents remitted by ENARGAS in connection with the tariff increase schedule and for ENARGAS to decide –within a 60 business day term following reception of said documents and verification of compliance with the provisions set forth in the transitory agreement dated October 9, 2008, on the tariff adjustment and the transitional tariff schedule stipulated therein. We and ENARGAS filed an extraordinary appeal before the Court of Appeals, which were dismissed by the Court of Appeals on May 27, 2011.

We cannot offer any assurance as to when ENARGAS will publish the tariff schedule and set the methodology. The transitional agreement will be in force until the effective date of the integral license renegotiation agreement to be signed with the Argentine government.

According to the transitional agreement, we should reach an agreement with the UNIREN on the terms and conditions of the overall renegotiation before the expiration date under the Public Emergency Law on December 31, 2011. If we do not reach this agreement, then UNIREN would inform the Executive Branch and provide it with recommendations for the procedural steps to follow.

In this regard, in October 2008, we received a proposal for a comprehensive license renegotiation agreement from the UNIREN (which includes the initial 20% tariff increase). As of the date of this Annual Report, we are still evaluating the terms of this proposal and negotiating with the UNIREN.

Notwithstanding this tariff increase, a delay in the application of the integral license renegotiation or any failure of the Argentine government to comply with the terms of the renegotiated license could materially adversely affect the profitability of our gas transportation segment.

In addition, the lack of a tariff adjustment has also adversely affected some gas distribution companies, which are our main clients in the gas transportation business segment. Failure of the distribution companies to reach an agreement with the Argentine government on their own tariff adjustment could materially adversely affect the collectability of our gas transportation revenues.

Our results of operations may be adversely affected because our License with the Argentine government is subject to renegotiation.

The Public Emergency Law authorizes the Argentine government to renegotiate public service contracts, tariffs and licenses with public utility companies on its own initiative, using the following criteria:

- the impact of the rates on the competitiveness of the economy and on income distribution;
- the quality of the services and the investment programs contractually provided for in the service contract;
- the interests of users, as well as service access conditions;
- the operational safety of the systems concerned; and
- the profitability of a company.

Since the enactment of the Public Emergency Law, there has not been significant progress with respect to the renegotiation of our public service contract with UNIREN. In spite of the transitional agreement reached, mentioned above, and the proposal made by the UNIREN, we cannot at this time provide any assurances with regard to the terms or the timing of any renegotiation of our License or the tariffs for our public service contract. The deadline for the renegotiation of the public works and utilities contracts has been extended until December 31, 2011.

Even if our public service contract is renegotiated on more favorable terms, those terms nonetheless may be insufficient to avoid a material adverse effect on our results of operations and financial condition. See “Item 4. Our Information—B. Business Overview—Gas Transportation—Regulatory Framework—Adjustment of Rates” below for more information.

Enron Corp. (“**Enron**”), a former indirect shareholder of Compañía de Inversiones de Energía S.A. (“**CIESA**”), our controlling shareholder, and Ponderosa Assets L.P. (“**Ponderosa**” and together with Enron, the “**Claimants**”) filed a claim with the International Centre for the Settlement of Investment Disputes (“**ICSID**”) against the Argentine government under the Bilateral Investment Treaty between the United States and Argentina (the “**Claim**”). We understand that the Claim argues that the pesification of tariffs and other unilateral changes to our regulatory structure affected by the Public Emergency Law and related laws and decrees violate the requirement of fair and equitable treatment under the treaty. On May 22, 2007, ICSID decided in favor of Enron and ordered the Argentine government to pay US\$106.2 million to the Claimants. In July 2010, an ICSID committee annulled the award rendered in 2007 and ordered the Claimants to reimburse the Argentine government the total amount of the annulment award costs. This annulment does not prevent the plaintiff from filing a new claim before said tribunal. On October 18, 2010, Enron Creditors Recovery Corp. (Enron’s new corporate name) and Ponderosa filed a new claim against the Argentine government before the ICSID. Currently, preparatory acts are being carried out for the establishment of the Tribunal that will hear the case. The continued pursuit of the Claim has adversely affected the timing and/or terms of any renegotiated tariff structure applicable to our gas transportation activities.

On January 20, 2011, Pampa Energía S.A. (“**Pampa**”) announced (a) its plans to acquire Enron Pipeline Company Argentina S.A. (“**EPCA**”) along with Enron’s economic rights to the Claim; (b) the purchase from Ashmore Energy International Limited (“**AEI**”) of debt issue by CIESA in respect of all notes (*Obligaciones Negociables*) issued by CIESA on April 22, 1997 (the “**CIESA Notes**”) and the two derivative transactions originally executed between CIESA and J. Aron & Company on August 3, 2000 and between CIESA and Morgan Guaranty Trust Company of New York on August 4, 2000 (the “**Derivatives**”) and (c) the purchase of AEI’s rights in certain litigation identified as “*Compañía de Inversiones de Energía S.A. v. AEI, AEI v. Compañía de Inversiones de Energía S.A., Petrobras Energía S.A., Petrobras Hispano Argentina S.A., Héctor Daniel Casal, Claudio Fontes Nunes y Rigoberto Mejía Aravena*” currently pending before the Supreme Court of the State of New York, New York County (the “**New York Litigation**”).

The proposal of UNIREN for the renegotiation of our License requires us, and our present and former shareholders, including Enron and its affiliates, to abandon any claim or lawsuit we or they may have against the Argentine government resulting from the effects of the Public Emergency Law applicable to the License and the PPI tariff adjustments that were not applied in 2000 and 2001. Additionally, the proposal would require us to hold the Argentine government harmless from any claim or lawsuit filed by any of our present or former shareholders or any compensation in favor of such shareholders and to reimburse the Argentine government for any amount paid by it to our shareholders in connection with any such claim or lawsuit. If our shareholders or shareholders of CIESA are unwilling to abandon such claims and lawsuits, our ability to secure tariff increases, and accordingly our revenues from gas transportation, may be adversely affected. Ponderosa, the entity holding the Claim, has indicated that it would only consider waiving the Claim, if it receives what it considers to be fair compensation.

Even if our shareholders and CIESA’s shareholders abandon such claims, there is no certainty regarding when the License renegotiation process will be completed. Other similarly situated public utility companies have complied with the UNIREN requirement. Some of these companies have been able to sign agreements with UNIREN that contemplate, among other things, an initial tariff increase and a tariff adjustment scheme for the future. However, the process for future tariff increases for these companies has been significantly delayed.

We conduct our business in an unionized environment

The sectors in which we operate are largely unionized. Although we consider our current relations with our workforce to be acceptable, we have experienced organized work disruptions and stoppages in the past and we cannot assure you that we will not experience them in the future. Additionally, labor demands are commonplace in Argentina's energy sector and unionized workers have blocked access to plants and routes in the recent past.

We do not maintain insurance coverage for business interruptions, including business interruptions caused by labor actions. Strikes, picketing or other types of conflict with the unionized personnel may adversely affect our results of operations and financial condition.

Our regulated business is dependent on our ability to maintain our License, which is subject to revocation under some circumstances.

We conduct our natural gas transportation business pursuant to the License, which authorizes us to provide gas transportation services through the exclusive use of the southern gas transportation system in Argentina. The Executive Branch may revoke our License in certain circumstances based on the recommendation of ENARGAS, the governmental body charged with the regulation of the transportation, distribution, marketing and storage of natural gas. Reasons for which our License may be revoked include:

- repeated failure to comply with the obligations of our License and failure to remedy a significant breach of an obligation in accordance with specified procedures;
- total or partial interruption of service for reasons attributable to us that affects transportation capacity during the periods stipulated in our License;
- sale, assignment or transfer of our essential assets or the placing of encumbrances thereon without ENARGAS's prior authorization, unless such encumbrances serve to finance extensions and improvements to the gas pipeline system;
- our bankruptcy, dissolution or liquidation;
- ceasing and abandoning the provision of the licensed service, attempting to assign or unilaterally transfer our License in full or in part without the prior authorization of ENARGAS, or giving up our License, other than in the cases permitted therein; and
- delegation of the functions granted in such contract without the prior authorization of ENARGAS, or the termination of such agreement without regulatory approval of a new contract.

If our License were revoked, we would be required to cease providing gas transportation services. The impact of a loss of our License on our business, financial condition and results of operations would be material and adverse.

Our creditors may not be able to enforce their claims against us in Argentina.

We are a stock corporation with limited liability, or *sociedad anónima*, organized under the laws of Argentina. Substantially all of our assets are located in Argentina.

Under Argentine law, foreign judgments may be enforced by Argentine courts, provided that the requirements of Articles 517 through 519 of the Federal Code of Civil and Commercial Procedure are met. Foreign judgments cannot violate principles of public policy (*orden público*) of Argentine law, as determined by Argentine courts. It is possible that an Argentine court would deem the enforcement of foreign judgments ordering us to make a payment in a foreign currency outside of Argentina to be contrary to Argentine public policy if at that time there are legal restrictions prohibiting Argentine debtors from transferring foreign currency outside of Argentina.

Under Argentine law, attachment prior to execution and attachment in aid of execution will not be ordered by an Argentine court with respect to property located in Argentina and determined by such courts to be utilized for the provision of essential public services. A significant portion of our assets may be considered by Argentine courts to be dedicated to the provision of an essential public service. If an Argentine court were to make such determination with respect to any of our assets, unless the Argentine government ordered the release of such assets, such assets would not be subject to attachment, execution or other legal process as long as such determination stands and the ability of any of our creditors to realize a judgment against such assets may be adversely affected.

In order to mitigate the energy crisis, the Argentine government has initiated new strategies, measures and programs with respect to the gas transportation industry, including the expansion of our pipeline and the interruption of firm transportation service (including the diversion of natural gas supply from the Cerri Complex), which could materially adversely affect our business, results of operations and financial condition.

Since 2002, the gas industry has experienced a sharp increase in natural gas demand as a consequence of: (i) the recovery of certain industries in the Argentine economy between 2002 and 2008, (ii) the 2002 devaluation of the peso and pesification of transportation and distribution tariffs and the elimination of both tariff and wellhead gas price adjustments, making this fuel relatively inexpensive for consumers as compared to other types of fuel the prices of which are affected by inflation and (iii) the growth of GDP between 2003 and 2008. However, notwithstanding this increase in demand, these conditions have severely and negatively impacted the profitability of companies providing services relating to the production, transportation and distribution of natural gas.

Specifically, distribution companies have been prohibited from passing through price increases to consumers. Producers of natural gas, therefore, have had difficulty implementing wellhead gas price adjustments since 2002, which has caused such producers to suffer a sharp decline in their rate of return on investment activities. As a result, natural gas production has not been high enough to meet the increasing demand. Likewise, the elimination of tariff adjustments for transportation companies has caused transportation companies to suffer a decrease in their profitability.

Pipeline expansions

In light of these events, the Argentine government has decided to implement a number of strategies, measures and programs aimed at mitigating the energy crisis and supporting the recovery of the Argentine economy generally. With respect to the natural gas industry, these strategies, measures and programs include, among others, the expansion of our pipeline, through the creation of financial trust funds as vehicles to facilitate financing of those investments. In order to finance such expansions, Law No. 26,095 was passed to provide for the creation of additional tariff surcharges (“*cargos específicos*”), which are special contributions to the gas trust fund made by the potential or actual beneficiaries of the improved gas transportation systems.

In 2005, a trust fund was created to carry out the expansion of the San Martín pipeline, which was completed in August 2005 and resulted in a transportation capacity increase of 102 MMcf/d. In addition, in April 2006, the MPFIPyS, the Federal Energy Bureau of Argentina (the “**Federal Energy Bureau**”) and gas transporters, among others, signed a Letter of Intent to carry out a second, significantly larger expansion of the gas pipeline system. This second expansion will increase the aggregate transportation capacity of our system by 378 MMcf/d.

Ownership of the works of the second expansion will lie with a gas trust fund and the investment will be financed by other gas trust funds, whose trustors are the gas producers and the shippers who subscribed the additional capacity. The works will be repaid with a new tariff charge that will ultimately be paid by the business and industrial users with firm transportation contracts, and not by the residential users.

The second expansion involves the installation of over 708 miles of pipeline loops and 196,800 HP of additional power. It also involves the construction of a new pipeline in the Magellan Strait, which was completed in March 2010, and permits the transportation of more natural gas from the Austral basin. As of December 31, 2010, 222 MMcf/d of the second expansion project has been completed and become operational.

The remaining 156 MMcf/d is estimated to be completed in different stages-53 MMcf/d in July 2011 and 103 MMcf/d during 2012. We cannot assure you that the remaining expansion projects will be completed by such time.

Although the expansion projects described above have not adversely affected our results of operations or financial condition, we cannot assure you that future expansion projects will not have such adverse effects.

Government-mandated interruption of contracted firm transportation services

In 2004, the Executive Branch issued Decree No. 181/04 directing the Federal Energy Bureau to establish a system of priority pursuant to which power stations and gas distribution companies (for their residential clients) could receive natural gas in priority to other users, even those with firm transportation and firm gas supply contracts. On March 23, 2005, we received a notice from the Federal Energy Bureau that provides that from time to time, as necessary, it can require us to interrupt transportation service (including those with firm transportation contracts) to our customers in order to service power stations and gas distribution companies and that ENARGAS will set the priority of transportation in such cases.

Since February 2008, gas delivery has been managed by a committee (formed by government officials from the Domestic Commerce Bureau, the MPFIPyS and the ENARGAS), who make adjustments to the daily natural gas deliveries considering the availability of natural gas and the demand of residential consumers and power plants (the latter provided by Compañía Administradora del Mercado Mayorista Eléctrico S.A. which administers the electricity market). If there is not sufficient natural gas availability, this committee decides how to allocate the available volumes among the different types of consumers by interrupting the natural gas exports and the supply to certain big industries (mainly petrochemicals companies including the Cerri Complex), without considering if they have firm or interruptible contracts of natural gas supply and/or transportation.

During the winter of 2007, natural gas production could not meet the demand, which was higher than in previous years, resulting from a combination of factors that included economic growth, lower hydroelectric generation and intense cold weather recorded during this season. At no time did transportation capacity constitute a bottleneck for the supply of available natural gas to the market. However, the transportation system was affected because the Argentine government expressly instructed us to redirect gas deliveries to supply power plants, residential users and vehicles according to instructions from the governmental committee referred to above during the emergency without considering whether other users have firm or interruptible natural gas supply and/or transportation contracts. During the last three winters, the natural gas demand from the residential segment was lower than in 2007 as a direct consequence of the warmer weather recorded in this period, while a higher demand from the industrial and electric power plants sectors was observed. Although the natural gas supply shortage did not generate a bottleneck in the transportation capacity for meeting the total demand from the system, the Argentine government imposed restrictions on the consumption of natural gas by certain customers that hold firm transportation contracts with us, in an effort to redirect and target the supply to the demand regarded as top priority, mainly residential users, compressed natural gas (“CNG”) stations and industries connected to the distribution network.

On September 2010, ENARGAS issued Resolution No. 1410/10 which came to regulate and complement the natural gas transportation dispatch dispositions regulated under Resolution No. 716/98. Moreover, ENARGAS issued complementary dispositions in April and June, 2011. This legal framework contains specific dispositions regarding the administration of natural gas deliveries, allocating the available natural gas volumes to the priority demand -which includes consumers type R, P and subdistribution-. Furthermore, it sets the standards regarding dispatch imbalances and rules the involvement of ENARGAS in the express request for the reallocation of transportation capacity from one consumer to another -where Priority Services prevail- on the grounds of natural gas deficits.

Although neither our results of operations nor financial condition were materially adversely affected by transportation service interruptions during the last three winters described above, we cannot assure you that similar interruptions will not in the future materially adversely affect our results of operations or financial condition.

Our liquids production depends on the natural gas that arrives at the Cerri Complex through three main pipelines from the Neuquén and Austral natural gas basins, which flow and calorific power are subject to risks that could materially adversely affect our liquids business segment. Gas arriving from the Neuquén basin has declined in quality since 2009.

Argentina relies heavily on natural gas. However, its natural gas reserves are declining. There is some risk that natural gas production will continue to decrease in the future and that new exploration will not compensate for such decline, which would adversely affect our liquids business segment by reducing the amount

of natural gas flowing to the Cerri Complex and, therefore, the amount of liquids we produce. In addition, since 2009, the quality of natural gas injected from the Neuquén basin has been lower (as a consequence of the reduction of natural gas production in this basin) and not appropriate for processing in the Cerri Complex, impacting negatively on its level of production. This lower output of natural gas also causes the increase in the cost of liquids production and commercialization for our own account which reduces our profit from this business segment.

We could also be adversely affected by additional competition in our liquids business. In 2000, a gas processing plant was built upstream of the Cerri Complex (see “Item 4.— Our Information—B. Business Overview— Liquids Production and Commercialization—Competition” below). Any other project that eventually may be developed upstream of the Cerri Complex, could adversely affect our revenues from liquids production and commercialization services.

In addition, as discussed in the preceding risk factor, actions taken by the Argentine government during the winter periods of recent years resulted in natural gas being redirected away from certain users, including the Cerri Complex. During the winter of 2007, processing at the Cerri Complex was interrupted for 27 days, not including days with partial interruptions. As a result, liquids production in 2007 was the lowest recorded since 2002. In the following years, the Cerri Complex has suffered fewer interruptions, mainly due to the use of regasified natural gas from a liquefied natural gas (“LNG”) regasification tanker. In the future, we could suffer natural gas supply interruptions as a result of unusually cold weather, falling natural gas reserves, or other factors beyond our control, and such interruptions could materially adversely affect our liquids business (see “Item 4.— Our Information—B. Business Overview— Liquids Production and Commercialization” below).

Finally, the level of liquids production could be materially adversely affected if natural gas prices in the domestic market increase relative to the reference international prices of LPG and natural gasoline, a condition that could cause gas producers to sell the natural gas rather than process it at the Cerri Complex.

Our liquids business is volatile and fluctuations in international prices may materially adversely affect our results of operations and financial condition.

As a result of the deterioration of our gas transportation segment and the significant increase in international prices of LPG and natural gasoline, operations relating to liquids production and commercialization have represented more than 50% of our total net revenues since 2003. In 2008, the international market for liquids remained favorable throughout most of the year, and even hit historical highs. However, prices fell dramatically in the last quarter of 2008 as the result of the international financial crisis. Since mid 2009 prices have recovered firmly, but remained below the record prices registered in 2008.

Any additional significant decline in international prices of LPG or natural gasoline may materially adversely affect our results of operations and financial condition.

Our ethane sales strongly depend on the PBB Polisor S.A. (“PBB”) capacity to purchase our production

We sell all our ethane to PBB under a 10-year agreement that will expire on December 31, 2015. The price was fixed until December 2007 and is now subject to adjustment based on a variety of factors. Any ethane extracted from the Cerri Complex which cannot be sold to PBB is reinjected into the pipeline. Ethane sales represented approximately 22%, 29% and 19% of our liquids production and commercialization business segment revenues in 2010, 2009 and 2008, respectively.

Within recent years, PBB has suffered several adverse operational conditions which affected its capacity to off-take our production of ethane. We cannot assure you that PBB’s adverse conditions will not repeat in the future. Any future unwillingness or inability of PBB to purchase our ethane production may materially affect our results of operations and financial condition.

The affirmative and restrictive covenants in our currently outstanding indebtedness could adversely restrict our financial and operating flexibility and subject us to other risks.

Our currently outstanding indebtedness contains numerous affirmative and restrictive covenants that limit our ability to, among other things, create liens; incur additional debt; pay dividends, acquire shares of stock

and make payments on subordinated debt; enter into transactions with affiliates; sell assets; or consolidate, merge or sell substantially all of our assets.

These restrictions may limit our ability to operate our businesses and may prohibit or limit our ability to enhance our operations or take advantage of potential business opportunities as they arise. The breach of any of these covenants by us or the failure by us to meet any of these conditions could result in a default under any or all of such indebtedness. Our ability to comply with these covenants may be affected by events beyond our control, including prevailing economic, financial and industry conditions and the renegotiation of public works and licenses process. In addition, if we are unable to generate sufficient cash flow from operations, we may be required to refinance outstanding debt or to obtain additional financing. We cannot assure you that a refinancing would be possible or that any additional financing would be obtained on acceptable terms.

Principal shareholders exercise significant control over matters affecting us.

Our controlling shareholder, CIESA, is in a position to direct our management, to control the election of a majority of the Board of Directors, to determine our dividend and other policies and to generally determine the outcome of any matter put to a vote of our shareholders. Pursuant to the procedures established by the Argentine government under which CIESA made its investment in us, there are restrictions on the ability of CIESA to reduce its shareholding in us below 51% of the share capital.

CIESA defaulted on its debt on April 22, 2002. On September 1, 2005, CIESA, its shareholders and its creditors executed a restructuring agreement (the “**Restructuring Agreement**”). In January 2009, AEI, which claimed to be the only holder of CIESA Notes, announced its decision to terminate the Restructuring Agreement. On January 28, 2009, CIESA commenced a legal action in the Supreme Court of the State of New York, County of New York (the “**New York Court**”) seeking a judicial declaration that any claim by AEI against CIESA arising in connection with CIESA Notes is time-barred because the statute of limitations period pertaining to any such claim has expired under New York law (see “Item 4.— Our Information—A. Our History and Development—General” below). Petrobras Argentina S.A. (“**Petrobras Argentina**”), Petrobras Hispano Argentina S.A. (“**Petrobras Hispano**” and together with Petrobras Argentina, the “**Group Petrobras Argentina**”), Pampa, Pampa Inversiones S.A. (“**PISA**”) and Inversiones Argentina I Ltd. (“**IAP**” and together with Pampa and PISA, the “**Group Pampa**”) and CIESA entered into a Memorandum of Agreement dated May 10, 2011, (the “**Memorandum of Agreement**”) which provides, among others, that such parties shall negotiate and reach an agreement to, first, suspend (“standstill”) the New York Litigation, reestablish the restructuring set forth in the Restructuring Agreement (based on the exchange of the Equity Option Debt for the Equity Option Consideration as described in Section 2.6 of the Restructuring Agreement and elsewhere in the Restructuring Agreement) and include Pampa as a party to the Restructuring Agreement, with the objective of obtaining the regulatory approvals and compliance of the remaining conditions precedent for the consummation of the Equity Option under the Restructuring Agreement, and, second, to settle and resolve the New York Litigation.

We are not a party to either action, but the outcome of this litigation, or any related settlement, could affect who controls or may control us.

As a consequence of the enactment of Law No. 26,425 in December 2008, which established the nationalization of the social security system, the AFJPs transferred to the ANSES their respective TGS shareholdings, representing more than 20% of our common stock. ANSES previously had been subject to a 5% limit on its voting rights until a Presidential Decree in April 2011 eliminated such restriction. Thus, the ANSES has become our main minority shareholder.

Item 4. Our Information

A. Our History and Development

General

Operations

We commenced commercial operations on December 29, 1992, as the largest company created in connection with the privatization of GdE, the Argentine state-owned gas company, whose integrated operations included gas transportation and distribution. GdE was divided into ten companies; two transportation companies and eight distribution companies.

We are a *sociedad anónima*, incorporated with limited liability under Argentine law on December 1, 1992. Our registered offices are located at Don Bosco 3672, 5th Floor, Buenos Aires (C1206ABF), Argentina, our telephone number is (54 11) 4865-9050 and our web address is www.tgs.com.ar.

We are currently the largest transporter of natural gas in Argentina, delivering approximately 61% of the total gas transported in Argentina, through 5,598 miles of pipeline, of which we own 4,754 miles. Substantially all of our transportation capacity, approximately 2.6 Bcf/d in 2010, is subscribed for under firm long-term transportation contracts. Gas transportation subscribers with firm contracts pay for the contracted pipeline capacity regardless of actual usage. Our natural gas transportation business is regulated by ENARGAS, and revenues from this business represented approximately 33% and 42% of our total net revenues for the years ended December 31, 2010 and 2009, respectively.

We conduct our natural gas transportation business pursuant to the License, which is currently scheduled to expire in 2027, extendable for an additional ten-year period at our option if certain conditions are met. This License gives us the exclusive right to operate the existing southern Argentine gas transportation pipeline system. Our system connects major gas fields in southern and western Argentina with both distributors and large consumers of gas in those regions as well as in the greater Buenos Aires area, the principal population center of Argentina.

We are also one of the largest processor of natural gas and one of the largest marketers of liquids in Argentina. We operate the General Cerri gas processing complex and the associated Galván loading and storage facility in Bahía Blanca in the Buenos Aires Province (the “**Cerri Complex**”) where liquids are separated from gas transported through our pipeline system and stored for delivery. Our liquids production and commercialization business is not subject to regulation by ENARGAS, and revenues from this segment represented approximately 61% and 50% of our total net revenues during the years ended December 31, 2010 and 2009, respectively.

Controlling shareholders

Our controlling shareholder is CIESA, which holds approximately 55.3% of our common stock. Local and foreign investors hold the remaining shares of our common stock. CIESA is owned 50% by Group Petrobras Argentina, 40% by a trust whose trustee is ABN AMRO BANK N.V. Sucursal Argentina, (the “**Trust**”), and the remaining 10% by EPCA – which was acquired by Pampa on April 8, 2011 after having obtained ENARGAS approval.

Due to the Argentine macroeconomic situation, starting with the enactment of the Public Emergency Law, CIESA did not pay at maturity, in April 2002, the principal, the last interest installment, and the cap and collar of its interest rate agreements.

In April 2004, Group Petrobras Argentina and Enron, at that time CIESA’s only shareholders, entered into the Master Settlement Agreement to provide the necessary flexibility to move forward in restructuring CIESA’s financial debt. The Master Settlement Agreement provided for, among other things, certain stock transfers to be implemented in two successive steps. In July 2005, ENARGAS approved the implementation of the first stage of the transactions contemplated by the Master Settlement Agreement and, as a result, on August 29, 2005, (a) Enron transferred 40% of CIESA’s shares to the Trust, and (b) Group Petrobras Argentina, transferred Class “B” common shares of TGS, representing 7.35% of our capital stock, to subsidiaries of Enron, which in turn were subsequently sold to third parties.

The Restructuring Agreement signed on September 1, 2005 among CIESA, Group Petrobras Argentina, EPCA, the Trust and its creditors contemplated the terms and conditions of the second stage of CIESA’s restructuring process, which was to be completed once the appropriate approvals were obtained from CNV, ENARGAS and *Comisión Nacional de Defensa de la Competencia* (“**CNDC**”).

On January 9, 2009, while approval of the Restructuring Agreement was pending before government bodies, AEI - the only self-declared holder of the CIESA Notes - notified CIESA its election to terminate the Restructuring Agreement.

On January 28, 2009, CIESA brought an action in New York state court seeking a declaratory judgment that any action initiated by AEI against CIESA in connection with the CIESA Notes is barred by the statute of

limitation, requesting an injunction for strict performance of the Restructuring Agreement and requesting damages for unlawful termination of the agreement by AEI.

In February 2009, AEI filed a bankruptcy petition against CIESA in the Courts of Argentina in connection with its financial debt. In October 2009, the Court of Appeals (*Sala C de la Cámara de Apelaciones en lo Comercial de la Capital Federal*) denied the bankruptcy petition lodged by AEI.

By means of a decision dated April 12, 2010, the court in New York decided to exercise jurisdiction over CIESA's request to hear both the main issues raised against AEI in connection with the statute of limitations of the CIESA Notes and those matters raised alternatively. On May 13, 2010, AEI filed an answer to CIESA's action and a counterclaim against CIESA seeking the payment of CIESA's financial debt. This counterclaim also names Group Petrobras Argentina and seeks compensation for damages, alleging that Group Petrobras Argentina have the control of CIESA and that Group Petrobras Argentina acted in their own advantage in an effort to defraud AEI. As of the date of this Annual Report, there are no other Court decisions related to this matter.

As we mentioned above, on May 10, 2011, CIESA executed a Memorandum of Agreement in which the parties agreed, firstly, to bring the New York Litigation, to a standstill in order to re-establish the restructuring provided under the Restructuring Agreement, and to include Group Pampa as a party thereto, all of the foregoing subject to the necessary governmental approvals in order to be able to implement the Restructuring Agreement; and secondly, to timely abandon and waive each and every claim and action that the parties and third parties have raised in the New York Litigation.

On May 18, 2011, together with CIESA, Group Petrobras Argentina, the Trust and Group Pampa, entered into a fourth amendment to the Restructuring Agreement which basically provides for the replacement of AEI by Group Pampa in the Restructuring Agreement. The fourth amendment to the Restructuring Agreement was filed with ENARGAS and CNDC and is subject to their respective approvals.

Capital expenditures

During the last three years, our aggregate capital expenditures amounted to approximately Ps. 546.0 million. Such capital expenditures include Ps. 109.6 million related to our gas transportation system expansions which were carried out under prepayment schemes, Ps. 245.5 million related to improvements to our gas transportation system, Ps. 87.2 million related to liquids production and commercialization activities and Ps. 103.7 million related to other services activities. Information relating to the size and financing of future investments is included in "Item 5. Operating and Financial Review and Prospects".

During 2008, Aluar Aluminio Argentino S.A.C.I ("**Aluar**") subscribed 35 MMcf/d additional transportation capacity. The pipeline expansion works related to this incremental service involved an investment of roughly Ps. 111 million. The related works consisted of the installation of loops along the San Martín pipeline and their financing was completed during 2009 through the advance payment for service from Aluar.

B. Business Overview

GAS TRANSPORTATION

As a transporter of natural gas, we receive gas owned by a shipper, usually a gas distributor, at one or more intake points on our pipeline system for transportation and delivery to the shipper at specified delivery points along the pipeline system. Under applicable law and our License, we are not permitted to buy or sell natural gas except for our own consumption and to operate the pipeline system. See "—Regulatory Framework" below for more information.

Our pipeline system connects major gas fields in southern and western Argentina with distributors and other users of gas in those areas and the greater Buenos Aires area. Transportadora de Gas del Norte ("**TGN**"), the only other natural gas transportation operating company that supplies the Argentine market, holds a similar license with respect to the northern pipeline system, which also provides gas transportation services to the greater Buenos Aires area.

Gas transportation services accounted for approximately 33%, 42% and 36% of our total net revenues in 2010, 2009 and 2008, respectively. In 2010, approximately 93% of our average daily gas deliveries were made under long-term firm transportation contracts. (See “—Customers and Marketing” below). Firm transportation contracts are those under which capacity is reserved and paid for regardless of actual usage by the customer. All of our firm contracted capacity is currently subscribed for at the maximum tariffs allowed by ENARGAS. During 2010, the amount of net revenues derived from firm transportation contracts was approximately Ps. 509,2 million, representing 92% of the total net revenues for the gas transportation segment. Substantially all of our remaining gas deliveries were made under interruptible transportation contracts entered into predominantly with four gas distribution companies and industrial customers. Interruptible contracts provide for the transportation of gas subject to available pipeline capacity. The Argentine government has at times directed us to interrupt supply to certain customers and make deliveries to others without regard to whether they have firm or interruptible contracts (see “Regulatory Framework—Industry Structure” below for more information).

Customers and Marketing

Our principal service area is the greater Buenos Aires region in central-eastern Argentina. We also serve the more rural provinces of western and southern Argentina. Our service area contains approximately 5.4 million end-users, including approximately 3.5 million in greater Buenos Aires. Direct service to residential, commercial, industrial and electric power generation end-users is mostly provided by four gas distribution companies in the area, all of which are connected to our pipeline system: MetroGas S.A. (“**MetroGas**”), Gas Natural Ban S.A. (“**BAN**”), Camuzzi Gas Pampeana S.A. (“**Camuzzi Pampeana**”) and Camuzzi Gas del Sur S.A. (“**Camuzzi Sur**”). These distribution companies serve in the aggregate approximately 67% of the distribution market in Argentina. The other five Argentine distribution companies are located in and serve northern Argentina and are not connected directly to our pipeline system.

The table below contains certain information for 2010, as it relates to the distribution companies that are connected to our pipeline system:

Company	Annual Deliveries (Bcf)	% of Market Served	No. of End-Users (in millions)	% of deliveries received from us
MetroGas ⁽¹⁾	253.9	24%	2.2	89%
Camuzzi Pampeana ⁽¹⁾	166.2	15%	1.2	98%
Camuzzi Sur	159.2	15%	0.6	100%
BAN ⁽¹⁾	137.7	13%	1.4	66%
		67%	5.4	

⁽¹⁾ Also connected to the TGN system.
Source: ENARGAS

The firm average contracted capacity for our four largest distribution customers, and for all other customers, as a group, as at December 31, 2010, 2009 and 2008, together with the corresponding net revenues derived from firm gas transportation services during such years and the net revenues derived from interruptible services during such years are set forth below:

Firm:	As at December 31,					
	2010		2009		2008	
	Average firm contracted capacity (MMcf/d)	Net revenues (million of pesos)	Average firm contracted capacity (MMcf/d)	Net revenues (million of pesos)	Average firm contracted capacity (MMcf/d)	Net revenues (million of pesos)
MetroGas	777	173.3	777	180.2	777	178.0
Camuzzi Pampeana	473	86.9	452	85.6	452	89.2
BAN	346	67.3	346	68.1	346	70.5
Camuzzi Sur	381	20.4	378	21.1	374	20.5
Petrobras Argentina	106	40.9	131	40.9	155	31.8
Others	646	120.4	558	221.3	484	85.3
Total firm	2,729	509.2	2,642	617.2	2,588	475.3
Interruptible and others:		41.7		52.2		31.0
Total	2,729	551.0	2,642	669.4	2,588	506.3

Step-down Rights. We are required by the ENARGAS to grant all shippers of natural gas step-down rights, which permit the shippers to reduce some of their committed capacity in the zones where, as a result of open bidding, new shippers of natural gas subscribed for firm transportation capacity, so long as we do not suffer any economic harm. ENARGAS's intention is to promote more efficient use of the pipeline system, avoiding over-subscribed capacity at levels above market demands. These rights have not been exercised by any clients yet. In case they are exercised, the associated revenue reduction will be compensated by the revenue increase generated by the new firm transportation contracts resulting from the open bidding.

Pipeline Operations

Pipeline Deliveries. The following table sets forth our average daily firm and interruptible transportation deliveries for 2010, 2009 and 2008:

Firm:	December 31,		
	For the year ended		
	2010	2009	2008
	Average daily deliveries (MMcf/d)	Average daily deliveries (MMcf/d)	Average daily deliveries (MMcf/d)
MetroGas	632	678	692
Camuzzi Pampeana	360	357	371
Camuzzi Sur	247	279	268
BAN	258	268	275
Others	604	519	484
Subtotal firm	2,101	2,101	2,090
Subtotal interruptible	159	95	138
Total	2,260	2,196	2,228
Average annual load factor ⁽¹⁾	79%	79%	86%
Average winter heating season load factor ⁽¹⁾	85%	86%	85%

⁽¹⁾ Average daily deliveries for the period divided by average daily firm contracted capacity for the period, expressed as a percentage

In 2010, as in every year, we committed substantial efforts and resources to ensure the reliable and efficient operation of our pipelines. Our endeavor was reflected in a compressor availability average of 97.3%. In this effort, we actively cooperated with the connection of the natural gas re-gasifying tanker (hired through Energía Argentina S.A. ("ENARSA") and discussed below) to our pipeline system, which allowed an increase in the volume of the natural gas supply during winter demand peaks.

Pipeline Expansions. In light of the lack of expansion of the natural gas transportation system in 2002 and 2003 (as a consequence of the "pesification" of tariffs and the fact that the renegotiation of the License was still pending) and a growing gas demand in all segments of the Argentine economy, the Argentine government established in April 2004 - through Executive Branch Decree No. 180/04 and Resolution No. 185/04 issued by the MPFIPyS - the framework for the creation of a trust fund (the "Gas Trust") aimed at financing the expansion of the national gas transportation system in a manner different from that established in the License.

In 2005, the first Gas Trust was constituted with the purpose of financing the expansion of the San Martín pipeline transportation capacity for approximately 102 MMcf/d. The expansion, completed in August 2005, was achieved through the construction of approximately 316 miles of pipeline and a compression capacity

increase of 30,000 HP through the construction of a new compressor plant and the revamping of some existing units. The Gas Trust invested approximately US\$311 million, which will be repaid by applying 20% of the revenues generated by the additional firm contracted capacity plus a surcharge, which is ultimately paid by industries, power plants and CNG suppliers for whom gas transportation supply is made under firm contracts. To cover part of the project cost, we invested approximately US\$40 million in the expansion (including Value Added Tax (“VAT”) in the amount of US\$7 million), which we will recover through our right to collect 80% of the revenues obtained from the additional transportation capacity based on our current tariff rate (but not to the extent of any increased rate that may apply in the future). These amounts represent annual revenues of approximately Ps. 23 million.

In April 2006, the Ministry of Federal Planning and Public Investment and Utilities, the Federal Energy Bureau and natural gas transportation companies, among others, signed a Letter of Intent to carry out the second expansion of the gas pipeline system which will increase the capacity of our transportation system by 378 MMcf/d. In December 2006, the gas trust fund contracts for the second expansion were signed, and we entered into an agreement under which we are managing the construction of the expansion.

Ownership of the works of the second expansion lies with a gas trust fund and the investment is financed by other gas trust funds, whose trustors are the gas producers and the shippers who subscribed the additional capacity. The costs of the works are being repaid with a new tariff charge that is ultimately paid by the business and industrial users with firm transportation contracts, and not by the residential users. In addition, as the works come into service, we take charge of their operation and maintenance and the rendering of firm transportation services. For these services, we are paid a monthly Charge for Access and Use (“CAU”). The CAU is less than the transportation tariff because we were not required to make any investment in the construction of this pipeline expansion.

The second expansion involves the installation of over 708 miles of pipeline loops and 196,800 HP of additional power. It also involved the construction of a new pipeline in the Magellan Strait for the transportation of natural gas from the Austral basin. This new pipeline in the Magellan Strait has a length of 24 miles and a transportation capacity of 600 MMcf/d. This work required the technical support of Petrobras Argentina (under the scope of the Technical Assistance Agreement – See “Item 4. Our Information—B. Business Overview—Gas Transportation—Pipeline Operations—Technical Assistance Agreement” below), which brought to the project its know-how and experience in off-shore activities. The dredging in the seabed and the later laying of the pipeline was carried out by the Dutch consortium of Royal Boskalis Westminster NV and the Allseas Group S.A. This project was completed in March 2010. As of December 31, 2010, 222 MMcf/d of the second expansion project had been completed and become operational.

Under the above mentioned management agreement signed in December 2006, we billed Ps. 50.3 million as consideration for our management services rendered for the completed portion of the expansion project comprising incremental transportation capacity of 247 MMcf/d. In addition, we are negotiating, with the ENARGAS and the trustee of the gas trust funds, the terms and conditions (other than the tariff which was set by the ENARGAS in 2008) under which we will render the operation and maintenance services with respect to this capacity.

We also are currently negotiating compensation arrangements for the management service associated with the remaining incremental transportation capacity of 131 MMcf/d.

In 2009, we collected Ps. 10.6 million plus VAT of Ps. 2.2 million from the trust fund and, as of December 31, 2010 we held an account receivable of Ps. 46.5 million (VAT included). As of the date of this Annual Report, the account receivable was cancelled through the issuance of 8-year term debt securities (“VRD”) of the Gas Trust. In addition, we hold an account receivable of Ps. 9.1 million with the trust fund in respect of interest on the receivable.

System Improvements. In 2010, 2009 and 2008, we made capital expenditures in the aggregate amount of approximately Ps. 75.4 million to continue the enhancement of the pipeline system’s safety and reliability. We operate our pipelines in accordance with Argentine gas transmission safety regulations, which are substantially similar to U.S. federal regulations. We believe that, based on the pipeline inspection reports, we have received to date and the pipeline repairs and/or replacements being made to the General San Martín and Neuba I pipelines, the current operation of the pipeline system poses no significant safety risks. Since the commencement of our operations in late 1992, we have implemented measures to ensure that the service would not be interrupted in any

relevant consumption center; and in the previous five years we have not had significant ruptures in our system's pipeline.

In order to identify any Stress Corrosion Cracking (“SCC”) that may occur in our pipelines, we conduct hydrostatic tests which do not require the interruption of gas transportation service. In addition, we use a model in order to detect in our pipelines areas liable to SCC. We are evaluating the contract for a new SCC detection tool which will be conducted through 228 miles of pipeline by the end of this year.

We also carry out internal inspection of the pipeline to detect external corrosion, through the use of high resolution inspection devices, which are called smart pigs. When high levels of external corrosion are detected, we proceed to recoat or replace the affected pipeline section, depending on the level of deterioration. In 2010, we carried out internal inspections of 808 miles of pipeline, which resulted in the recoating of 2 miles of pipeline.

Technical Assistance Agreement. As part of its bid to purchase a 70% interest in us from the Argentine government, CIESA was required to have an investor-company with experience in natural gas transmission that would serve as our technical operator. In late 1992, we entered into a Technical Assistance Agreement with EPCA, an indirect, majority-owned subsidiary of Enron. The term of the Technical Assistance Agreement was for eight years from December 28, 1992, renewable automatically upon expiration for an additional eight-year periods. The Settlement Agreement, mentioned in “—Our History and Development—General”, includes a term which provides for the assignment of the Technical Assistance Agreement to Petrobras Argentina. This assignment, which was approved by ENARGAS in June 2004, was carried out on July 15, 2004. Since that date, Petrobras Argentina has been our technical operator and is in charge of providing assistance related to, among others, the operation and maintenance of the gas transportation system and related facilities and equipment in order to ensure that the performance of the system is in conformity with international gas transportation industry standards and in compliance with certain Argentine environmental standards. In November 2008, we and Petrobras Argentina approved the renewal of the Technical Assistance Agreement for a three-year term, expiring on December 28, 2011.

The Technical Assistance Agreement sets out the services to be provided by Petrobras Argentina to us, at the request of our Chief Executive Officer (“CEO”), in return for payment of an annual technical assistance fee equal to the greater of (i) Ps. 3 million or (ii) 7% of the amount obtained after subtracting Ps. 3 million from net income before financial income (expense) and holding gains (losses) and income taxes. The services to be provided by Petrobras Argentina to us under the Technical Assistance Agreement include assisting us in the following matters to the extent that they arise in the ordinary course of business: (i) replacement, repair and renovation of facilities and equipment to ensure that the performance of the system is in accordance with international gas transportation industry standards; (ii) preparation of performance evaluations, operating cost analyses, construction assessments and advice related to budget control; (iii) advice regarding safety, reliability and efficiency of system operation and gas industry services; (iv) advice regarding compliance with applicable laws and regulations relating to safety and health, pollution and environmental protection of the system; (v) routine and preventive maintenance of the system; (vi) staff training; (vii) design and implementation of the procedures necessary to accomplish the aforesaid services; and (viii) design and implementation of a management information and inspection system for all major aspects of natural gas transportation and liquids production.

The Argentine Natural Gas Industry

Historical Background. Prior to the privatization of GdE, the Argentine natural gas industry was effectively controlled by the Argentine government. In addition, prior to its privatization, Repsol-YPF S.A. (“Repsol-YPF”) or its predecessors held exclusive rights over the development and production of all new hydrocarbon reserves in Argentina.

In 1992, the Natural Gas Act and Decrees Nos. 1,189/92 and 1,738/92 of the Executive Branch were passed providing for the privatization of GdE. The Natural Gas Act and the related decrees provided for, among other things, the transfer of substantially all of the assets of GdE to two transportation companies and eight distribution companies. The transportation assets were divided into two systems on a broadly geographical basis, the northern and southern trunk pipeline systems, designed to give both systems access to gas sources and to main centers of demand, including the greater Buenos Aires area. As a result of the division, our transportation system is connected to the two distribution systems serving the greater Buenos Aires area, one serving Buenos Aires Province (excluding the greater Buenos Aires area) and one serving southern Argentina. TGN is connected to five distribution systems serving northern Argentina. TGN is also connected to the distribution systems serving the greater Buenos Aires area and, to a limited extent, the distribution system serving Buenos Aires

Province (excluding the greater Buenos Aires area). In the two instances where we are directly connected to a distribution system with TGN, we are the principal supplier of gas transportation services.

The Natural Gas Act and the related decrees granted each privatized gas transportation company a license to operate the transferred assets, established a regulatory framework for the privatized industry based on open, non-discriminatory access, and created ENARGAS to regulate the transportation, distribution, marketing and storage of natural gas. The Natural Gas Act also provided for the regulation of wellhead gas prices in Argentina for an interim period. Prior to deregulation, the regulated price was set at US\$0.97/million British thermal units (“MMBtu”) at the wellhead, which had been the regulated price since 1991. Pursuant to Decree No. 2,731/93, gas prices were deregulated as of January 1, 1994.

On February 13, 2004, the Executive Branch signed two decrees related to the natural gas market in order to secure the adoption of measures to normalize the supply of natural gas. The Executive Branch, through Decree No. 180/04, established the creation of the Electronic Gas Market (“MEG”) with the purpose of improving the transparency of financial and operating performance, the coordination of daily transactions both of the gas spot market and the transportation and distribution to secondary markets along with the shaping of efficient prices through free offer and demand interaction. To that purpose, all firm transportation capacity unallocated for the following day is to be marketed through the MEG and the proceeds used at the discretion of the Federal Energy Bureau. Unallocated capacity includes remaining capacity not used in any of the transportation systems or pipelines. This implies that we are bound to offer daily unallocated capacity, which might have a material impact on our interruptible transportation revenues. Despite the MEG’s commencement of operations in August 2005, it has not begun overseeing or requiring such transactions.

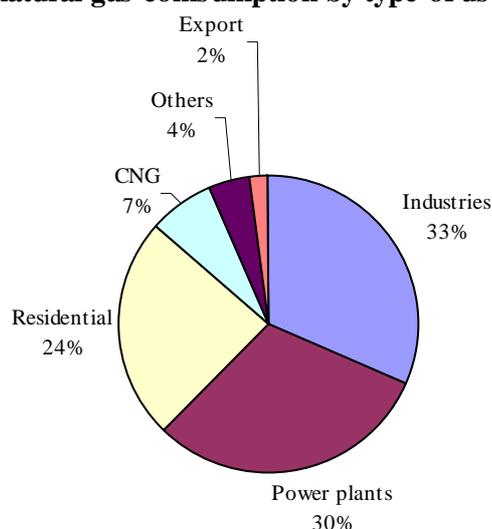

In spite of the devaluation of the peso in 2002, increases in wellhead gas prices were limited until 2004. From May 2004 until August 2005, wellhead gas prices increased in a range from 105% to 180% (depending on the gas basins) for power plants, industries and large businesses. For such large consumers (except for power plants), the wellhead gas price has been deregulated since March 31, 2006. Nevertheless, the natural gas price for these large consumers can not be higher than the export parity price (net of tax on exports). These adjustments were complemented by lower increases in the price of natural gas for CNG vehicles. In October 2008, wellhead gas prices paid mostly by high consuming residential users were increased in order to subsidize the reduction in LPG bottle price, as agreed between the Federal Energy Bureau and LPG producers.

In order to increase the production of natural gas, the Argentine government launched the Gas Plus Program in 2008, which aims to encourage producers to make further investments in natural gas infrastructure by allowing them to sell the resulting production of natural gas from new fields and fields that require more expensive extraction techniques at higher prices than the current authorized prices. In 2010, the Argentine government increased the price paid to gas producers who invest in new fields and shale and tight gas. According to the Federal Energy Bureau, it is expected that Gas Plus Program projects would generate investments for more than US\$2 billion and add nearly 250,000 MMm³ in the next four years.

Demand for Natural Gas. Natural gas consumption in Argentina has played a significant role in the energy industry in recent years, reaching more than 50% of total national energy consumption, which is greater than the comparable percentage for worldwide energy consumption. Currently there are constraints on the supply of natural gas resulting from governmental restrictions on increases in the wellhead price of natural gas, as well as limits on increases in the transportation and distribution tariffs.

The graphic below illustrates the consumption of natural gas in Argentina by class of user, stated as a percentage of total consumption, for the year ended December 31, 2010, the most recent year for which such information is available:

2010 natural gas consumption by type of user

Source: ENARGAS

A sharp increase in natural gas demand occurred, starting in 2002, as a consequence of: (i) the recovery of certain industries in the Argentine economy since 2002, (ii) the 2002 devaluation of the peso and pesification of transportation and distribution tariffs and the elimination of both tariff and wellhead gas price adjustments, making this fuel relatively inexpensive for consumers as compared to other types of fuel the prices of which are affected by inflation and (iii) the growth of GDP between 2003 and 2010. As a result, natural gas became, by far, the cheapest fuel in Argentina and there are high rates of substitution of natural gas for other fuels in industry, power plants and vehicles. Likewise, the rising demand for gas also has been based on the recovery of many industrial segments of the Argentine economy, and the lack of availability of natural gas to meet current demand represents a challenge for continued industrial growth at the rates achieved in recent years.

The Argentine government has decided to play a decisive role in the natural gas industry through a set of measures designed to address the combination of rising demand and lower investment in exploration, production, transportation and distribution of natural gas:

- creation of ENARSA in 2004 for the purposes of restoring levels of reserves, production and supply of natural gas and meeting the infrastructure needs of the gas transportation and electricity industries;
- construction of a new pipeline which may connect the Bolivian natural gas basins with the northeastern region of Argentina and the greater Buenos Aires region;
- hiring of two re-gasifying LNG tankers through ENARSA, in Bahía Blanca and Escobar, to inject natural gas into the pipeline;
- approval of graded price increases of natural gas at the wellhead;
- establishment of a framework for the constitution of trust fund vehicles to finance gas pipeline expansions;
- creation of the MEG to improve the transparency and efficiency of daily operations through the free interaction of the offer and demand of natural gas;
- implementation of various programs to stimulate savings of gas and electricity consumption in order to apply them in industrial activities;
- importation of natural gas from Bolivia, electricity from Brazil and Uruguay, and fuel oil and gas oil from Venezuela and others countries - the latter as an alternative fuel to natural gas - and to reduce natural gas exports to Chile;
- completion of the expansion work at the Yacyretá Hydroelectric Plant and Atucha II Nuclear Power Plant;
- creation of the Gas Plus Program in 2008, which aims to encourage producers to make further investments in natural gas infrastructure by allowing them to sell the resulting production of natural gas from new fields and fields that require more expensive extraction techniques at higher prices than the current authorized prices;
- construction of two thermal power plants financed by the Argentine government and construction of

power plants; and

- creation of tariff charges to be paid by all consumers other than residential consumers in order to finance gas and electricity expansions.

In light of the lack of expansion of the natural gas transportation system in 2002 and 2003 (as a consequence of the “pesification” of tariffs and the fact that the renegotiation of the License was still pending) and a growing gas demand in all segments of the Argentine economy, the Argentine government established in April 2004 - through Executive Branch Decree No. 180/04 and Resolution No. 185/04 issued by the MPFIPyS - the framework for the creation of gas trusts aimed at providing an alternative process for financing the expansion of the national gas transportation system. See “Item 4. Our Information—B. Business Overview—Gas Transportation—Pipeline Operations—Pipeline Expansions” above for current expansion projects in progress.

The Argentine government, through ENARSA, is currently assessing the advisability of building two liquefied natural gas regasification plants (in the province of Buenos Aires and in Uruguay) intended to cover the natural gas market deficit. In the meantime, since 2008, ENARSA has contracted a liquefied natural gas regasification ship, which allows the injection of natural gas into the pipeline at the Port of Bahía Blanca in order to cover the higher demand in the winter season. In 2010, 63.0 billion of cubic feet of natural gas were injected into the pipeline from the ship. In recent years, injections of natural gas from the ship have played an important role in satisfying the growing natural gas demand during the coldest months of the year. ENARGAS assigned to us the responsibility of controlling the operation and maintenance of certain new facilities constructed to connect the regasification ship to the existing transportation pipeline.

Gas Supply. For the most part, Argentina’s gas reserves were discovered as a result of exploration for oil reserves. There are 19 known sedimentary basins in the country, ten of which are located entirely onshore, six of which are combined onshore/offshore and three of which are entirely offshore. Production is concentrated in five basins: Noroeste in northern Argentina, Neuquén and Cuyo in central Argentina, and Golfo San Jorge and Austral in southern Argentina. Approximately 64% of the gas transported by our system in 2010 originated in the Neuquén basin with the remainder coming primarily from the Austral basin. Our pipeline system is connected to the Neuquén, Austral and Golfo San Jorge basins. We are not connected to the Cuyo or Noroeste basins. Set forth in the table below is the location of the principal gas producing basins by province, their proved natural gas reserves estimated as of December 31, 2009, production in 2009 (the last year for which information is available) and the calculated reserve life for each basin:

Basin	Location by province	Proved Gas Reserves⁽¹⁾⁽²⁾	Production 2009	Reserve Life⁽³⁾
		Bcf	Bcf	(years)
Neuquén	Neuquén, Río Negro, La Pampa, Mendoza (south)	5,417	952	6
Austral	Tierra del Fuego, Santa Cruz (south), and offshore	3,560	350	10
Golfo San Jorge	Chubut, Santa Cruz (north)	1,459	183	8
Cuyo	Mendoza (north)	16	2	8
Noroeste	Salta, Jujuy, Formosa	1,967	222	9
Total		12,419	1,709	7

⁽¹⁾ Estimated as of December 31, 2009. There are numerous uncertainties inherent in estimating quantities of proved gas reserves. The accuracy of any reserve estimate is a function of the quality of available data, and engineering and geological interpretation and judgment. Results of drilling, testing and production after the date of the estimate may require substantial upward or downward revisions. Accordingly, the reserve estimates could be materially different from the quantity of gas that ultimately will be recovered.

⁽²⁾ Reserve figures do not include significant reserves located in certain Bolivian basins to which TGN is connected.

⁽³⁾ Weighted average reserve life for all basins, at 2009 production levels.

Source: Federal Energy Bureau

Neuquén Basin. The largest of the gas basins and the major source of gas supply for our system is the Neuquén basin, located in west central Argentina. However, in recent years, its proved gas reserves have been decreasing sharply as new gas reserves have not been found in order to replace the natural gas produced. The TGN system also accesses the Neuquén basin. Of the transported gas coming from the Neuquén Basin approximately 62% was transported by us and approximately 38% by TGN for the year ended December 31, 2010.

Austral and Golfo San Jorge Basins. Natural gas provided by these basins, located in the southern region of Argentina, was transported mainly by us (Camuzzi Sur also transports gas through regional pipelines). In the Austral basin, exploration has centered in and around the basin's existing gas fields and on other fields located offshore. The Golfo San Jorge basin is primarily an oil-producing basin.

Regulatory Framework

Industry Structure. The Natural Gas Act, together with Decree No. 1,738/92, other regulatory decrees, the *Pliego de Bases y Condiciones para la Privatización de Gas del Estado S.E.* (the "**Pliego**"), the transfer agreements and the licenses of the newly privatized companies establish the legal framework for the transportation and distribution of gas in Argentina. Law No. 17,319 (the "**Hydrocarbons Law**") regulates the midstream gas industry, under a competitive and partially deregulated system. The Public Emergency Law and related laws and regulations have had the practical effect of significantly altering the regulatory regime under which we operated until 2002. See "Item 3. Key Information—D. Risk Factors—Risks Relating to Our Business."

Natural gas transportation and distribution companies operate in an "open access", non-discriminatory environment under which producers and certain third parties, including distributors, are entitled to equal and open access to the transportation pipelines and distribution system in accordance with the Natural Gas Act, applicable regulations and the licenses of the privatized companies. In addition, a regime of concessions under the Hydrocarbons Law is available to holders of exploitation concessions to transport their own gas production.

The Natural Gas Act prohibits gas transportation companies from also being merchants in natural gas. Also, (i) gas producers, storage companies, distributors, and consumers who contract directly with producers may not own a controlling interest (as defined in the Natural Gas Act) in a transportation company, (ii) gas producers, storage companies and transporters may not own a controlling interest in a distribution company, and (iii) merchants in natural gas may not own a controlling interest in a transportation or distribution company.

Contracts between affiliated companies engaged in different stages in the natural gas industry must be approved by ENARGAS. ENARGAS may reject these contracts if it determines that they were not entered into on an arm's-length basis.

ENARGAS, which was established by the Natural Gas Act, is an autonomous entity responsible for enforcing the provisions of the Natural Gas Act, the applicable regulations and the licenses of the privatized companies. Under the provisions of the Natural Gas Act, ENARGAS is required to be governed by a Board of Directors composed of five full-time directors appointed by the Executive Branch subject to confirmation by the Congress. However, since 2004 ENARGAS has been governed by three directors who were not confirmed by the Argentine Congress and, currently, ENARGAS is administered by an inspector appointed by the Executive Branch through Decree No. 571/07. Executive Branch intervention is due to investigation of ENARGAS' possible involvement in alleged improper payments made by a sub-contractor hired by a third party engaged by the Gas Trust in connection with the construction of a portion of the 2005 expansion project.

ENARGAS, which operates within the purview of the MPFIPyS, has broad authority to regulate the operations of the transportation and distribution companies, including the ability to set rates. ENARGAS has its own budget which must be included in the Argentine National Budget and submitted to Congress for approval. ENARGAS is funded principally by annual control and inspection fees that are levied on regulated entities in an amount equal to the approved budget, net of collected penalties, allocated proportionately to each regulated entity based on its respective gross regulated revenues, excluding natural gas purchase and transportation costs in the case of distribution companies. ENARGAS also collects the fines imposed for violations of the Natural Gas Act on each company's license.

Most of the electrical power stations do not have firm gas supply agreements and, as a result of the gas shortage in Argentina, have increasingly used imported natural gas and used alternative fuels that are more expensive than natural gas produced in Argentina. In 2004, the Executive Branch issued Decree No. 181/04, directing the Federal Energy Bureau to establish a system of priority pursuant to which power stations and gas distribution companies (for their residential clients) could receive natural gas in priority to other users, even those with firm transportation and firm gas supply contracts. On April 21, 2004, the MPFIPyS issued Resolution No. 208/04 that ratified an agreement between the Federal Energy Bureau and gas producers to give effect to this new system.

On March 23, 2005, we received a notice from the Federal Energy Bureau that provides that, in the event there is insufficient gas available in the market to supply power stations, we can be required to interrupt transportation services (including those with firm transportation contracts) to our customers in order to give priority to gas distribution companies and power plants that have not entered into firm transportation contracts. In any such case, ENARGAS will set the priority of transportation.

Under these circumstances and our License, when ENARGAS asks us to interrupt firm transportation contracts, we are exposed to potential claims from, among others, our customers. Therefore, we have requested that in connection with these new procedures, ENARGAS submit to us written instructions for any such firm transportation service interruption request. However, if ENARGAS does not accept our petition and we do not comply with ENARGAS instructions, if any, in order to avoid future claims from our customers, Resolution No. 208/04 will require us to pay the price difference between natural gas and the alternative fuel used by power stations in order to offset the loss resulting from our failure to comply with the instructions.

At the end of May 2007, due to a rise in demand resulting from unusually low temperatures throughout the country, ENARGAS and the Federal Energy Bureau utilized their authority under this resolution for the first time. ENARGAS honored our petition, and submitted written instructions to us. We complied with these instructions and do not believe that our compliance will result in legal action by any of our firm transportation clients, which legal action, if brought, could have a significant adverse economic and financial effect on us. We have not received any judicial claims from any of our firm transportation clients as of the date of this Annual Report.

During the winter of 2007, natural gas demand from residential users continued growing and the demand from power plants was higher than in previous years, resulting from a combination of factors that included economic growth, lower hydroelectric generation and intense cold weather recorded during this season. Natural gas production could not meet this higher demand, but at no time did transportation capacity constitute a bottleneck for the supply of available natural gas to the market. However, the transportation system was affected because the Argentine government expressly instructed us to redirect gas deliveries to supply power plants, residential users and vehicles according to instructions from the governmental committee referred to above during the emergency without considering whether such customers have firm or interruptible contracts of natural gas supply and/or transportation. These governmental measures did not have a material impact on our results. During the winter of 2008, the natural gas demand from the residential segment was lower than in 2007 as a direct consequence of the warmer weather recorded in this period, while a higher demand from the industrial and electric power plants sectors was observed. Although the supply shortage did not generate a bottleneck in the transportation capacity for meeting the total demand from the system, the government imposed restrictions on the consumption of natural gas by certain customers that hold firm transportation contracts with us, in an effort to target the supply to the demand regarded as top priority, mainly residential users, CNG stations and industries connected to the distribution network.

In order to comply with this policy, since February 2008, the gas delivery has been managed by a committee (formed by government officials from the Domestic Commerce Bureau, the MPFIPyS and the ENARGAS), who make adjustments to the daily natural gas deliveries considering the availability of natural gas and the demand of residential consumers and power plants (the latter provided by Compañía Administradora del Mercado Mayorista Eléctrico S.A. which administers the electricity market). If there is not sufficient natural gas availability, this committee decides how to allocate the available volume among the different types of consumers by interrupting the natural gas exports and the supply to certain large industries (mainly petrochemicals companies including the Cerri Complex), without considering if they have firm or interruptible contracts of natural gas supply and/or transportation.

During the winter of 2009, our gas pipeline system satisfactorily met the demand for natural gas mainly due to the use of ENARSA gas provided to our transportation system under the Total Energy Program. In 2010, natural gas demand in Argentina once again exceeded available supply, as a result of the restrictions placed on supply to industries during winter months. The situation was more severe than in 2009 basically as a result of the 10% increase in residential demand, triggered by a colder winter in 2010.

Lower natural gas production in 2010 was supplemented by higher natural gas imports by ENARSA through the purchase of LNG, injected to the pipeline transportation system through the re-gasification tanker described above. Compared to 2009 figures, LNG imports more than doubled and the tanker operated throughout the whole year. Gas imports from Bolivia stayed at the same levels of 2009.

The Executive Branch, through Decree No. 180/04, among other measures, established the creation of the MEG with the purpose of improving the transparency of financial and operating performance, the coordination of daily transactions both of the gas spot and the transportation and distribution secondary markets along with the shaping of efficient prices through supply and demand free interaction. To that purpose, all firm transportation capacity non-allocated for the following day shall be marketed through the MEG and the proceeds from that capacity sale will be used at the Energy Bureau's criteria. Non-allocated capacity includes remaining capacity not used in any of the transportation systems or pipelines. This implies that we are bound to offer daily non-allocated capacity that complies with this condition in the MEG, which might have a material impact on our interruptible transportation revenues. In 2010, the MEG has gradually been used to perform specific transactions which did not have a negative impact in our firm and interruptible gas transportation business.

Our License. Our License authorizes us to provide the public service of gas transportation through the exclusive utilization of the southern gas transportation system. Our License does not grant us an exclusive right to transport gas in a specified geographical area and licenses may be granted to others for the provision of gas transportation services in the same geographical area. TGN operates the northern gas transportation system under a license containing substantially similar terms to those described below and elsewhere herein.

Our License was granted for an original term of 35 years beginning on December 29, 1992. However, the Natural Gas Act provides that we may apply to ENARGAS for a renewal of our License for an additional ten-year term. ENARGAS is required at that time to evaluate our performance and make a recommendation to the Executive Branch. If ENARGAS determines that we are in substantial compliance with all our obligations arising under the Natural Gas Act, related regulations and our License, the renewal could be granted by the Executive Branch. ENARGAS would have the burden of proving that we had not complied with the obligations described above and, therefore, should not be granted a renewal. At the end of the 35-year or 45-year term, as the case may be, the Natural Gas Act requires that a new competitive auction be held for the license, in which we would have the option, if we have complied substantially with our obligations described above, to match the best bid offered to the Argentine government by any third party. To the extent that we were found not to have complied with the obligations described above or chose not to seek renewal of our License, we would be entitled to certain specified compensation. See “—Certain Restrictions with Respect to Essential Assets” below.

Our License also places certain other rights and obligations on us relating to the services we provide. These include:

- operating and safety standards;
- terms of service, including general service conditions such as specifications regarding the quality of gas transported, major equipment requirements, invoicing and payment procedures, imbalances and penalties, and guidelines for dispatch management;
- contract requirements, including the basis for the provision of service, e.g., “firm” or “interruptible”;
- mandatory capital investments to be made over the first five-years of the license term; and
- applicable rates based on the type of transportation service and the area serviced.

Our License establishes a system of penalties in the event of a breach of our obligations thereunder, including warnings, fines and revocation of our License. These penalties may be assessed by ENARGAS based, among other considerations, upon the severity of the breach or its effect on the public interest. Fines of up to Ps. 500,000 may be levied for persistent breaches. Revocation of our License may only be declared by the Executive Branch upon the recommendation of ENARGAS. Our License specifies several grounds for revocation, including the following:

- repeated failure to comply with the obligations of our License and failure to remedy a significant breach of an obligation in accordance with specified procedures;
- total or partial interruption of the service for reasons attributable to us, affecting completely or partially transportation capacity during the periods stipulated in our License;

- sale, assignment or transfer of our essential assets or otherwise encumbering such assets without ENARGAS's prior authorization, unless such encumbrances serve to finance extensions and improvements to the gas pipeline system;
- bankruptcy, dissolution or liquidation; and
- ceasing and abandoning the provision of the licensed service, attempting to assign or unilaterally transfer our License in full or in part without the prior authorization of ENARGAS, or giving up our License, other than in the cases permitted therein.

Our License also prohibits us from assuming debt of CIESA, or from granting credit to, creating security interests in favor of, or granting any other benefit to, creditors of CIESA.

Generally, our License may not be amended without our consent. As part of the renegotiation process under the Public Emergency Law, however, the terms of our License may be changed or our License may be revoked. In addition, ENARGAS may alter the terms of service annexed to our License. If any such alteration were to have an economic effect on us, ENARGAS could modify our rates to compensate for such effect or we could request a change in the applicable rates.

Regulation of Transportation Rates—Actual Rates. The gas transportation rates established under each transportation company's license must be calculated in U.S. dollars and converted into pesos at the time of billing pursuant to the terms of such license. However, the Public Emergency Law eliminated tariff indexing covenants based on U.S. dollar exchange rate fluctuations and established a conversion rate of one peso equal to one U.S. dollar for tariffs.

The transportation rate for firm transportation services consists of a capacity reservation charge and is expressed as a maximum monthly charge based on the cubic meters per day of reserved transportation capacity. The rate for interruptible transportation service, which is expressed as a minimum (from which no discounts are permitted) and a maximum rate per 1,000 m³ of natural gas transported, is equivalent to the unit rate of the reservation charge for the firm service based on a load factor of 100%. For both firm and interruptible transportation services, customers are obligated to provide a natural gas in-kind allowance, expressed as a maximum percentage of gas received, equivalent to the gas consumed or lost in rendering the transportation service. The rates for all services reflect the rate zone(s) traversed from the point of receipt to the point of delivery.

The table below sets out our local firm and interruptible rates by pipeline and zones, in effect as of the date of this Annual Report (which have not changed since January 1, 2000):

Rate Zones		Firm	Interruptible	Compression Fuel and Losses ⁽³⁾ (%)
		Reservation Charge ⁽¹⁾ (Ps.m ³ /d)	Minimum Charge ⁽²⁾ (Ps.1,000 m ³ /d)	
Receipt	Delivery			
From Tierra del Fuego to:	Tierra del Fuego	0.076	2.541	0.49
	Santa Cruz Sur	0.154	5.123	0.98
	Chubut Sur	0.392	13.068	3.38
	Buenos Aires Sur	0.462	15.396	5.60
	Bahía Blanca	0.707	23.583	8.40
	La Pampa Norte	0.705	23.500	8.60
	Buenos Aires	0.828	27.593	10.35
	Greater Buenos Aires	0.929	30.959	11.27
From Santa Cruz Sur to:	Santa Cruz Sur	0.077	2.575	0.49
	Chubut Sur	0.315	10.508	2.89
	Buenos Aires Sur	0.385	12.841	5.11
	Bahía Blanca	0.632	21.071	7.91
	La Pampa Norte	0.632	21.067	8.11
	Buenos Aires	0.753	25.093	9.86
	Greater Buenos Aires	0.854	28.470	10.78
From Chubut to:	Chubut Sur	0.077	2.554	0.49
	Buenos Aires Sur	0.144	4.788	2.71
	Bahía Blanca	0.383	12.768	5.51
	La Pampa Norte	0.402	13.406	5.71
	Buenos Aires	0.498	16.598	7.46
	Greater Buenos Aires	0.594	19.790	8.38

Rate Zones		Firm	Interruptible	Compression Fuel and Losses ⁽³⁾ (%)
		Reservation Charge ⁽¹⁾ (Ps.m ³ /d)	Minimum Charge ⁽²⁾ (Ps.1,000 m ³ /d)	
Receipt	Delivery			
From Neuquén to:	Neuquén	0.068	2.334	0.49
	Bahía Blanca	0.331	11.018	2.80
	La Pampa Norte	0.356	11.868	3.15
	Buenos Aires	0.448	14.923	3.91
	Greater Buenos Aires	0.548	18.315	4.86

(1) Monthly charge for every cubic meter per day of reserved transportation capacity.

(2) Minimum charge equal to the unit rate of the firm reservation charge at a 100% load factor.

(3) Maximum percentage of total transported gas which customers are required to replace in-kind to make up for gas used by us for compressor fuel or losses in rendering transportation services.

Source: ENARGAS Resolution No. 2,496/02 (gross receipts tax is not included in such transportation rates)

The CAU is a charge created by the ENARGAS for the purpose of compensating TGN and us for the operation and maintenance services provided with respect to the incremental transportation capacity associated with the expansions carried out by the gas trusts and us since 2007. This charge is paid by the clients which required the additional transportation capacity and those who financed their expansions by means of advance payments and is set by the ENARGAS. See “Item 4. Our Information—B. Business Overview—Gas Transportation—Pipeline Operations—Pipeline Expansions”.

Adjustment of Rates. Under our License, we may be permitted to adjust rates semi-annually to reflect changes in PPI and every five years in accordance with efficiency and investment factors to be determined by ENARGAS and, subject to ENARGAS’s approval, from time to time to reflect cost variations resulting from changes in the tax regulations (other than income tax) applicable to us, and for objective, justifiable and non-recurring circumstances.

The Natural Gas Act requires that in formulating the rules that apply to the setting of future rates, ENARGAS must provide the transportation companies with (i) an opportunity to collect revenues sufficient to recover all future proper operating costs reasonably applicable to service, as well as future taxes and depreciation, and (ii) a reasonable rate of return, determined in relation to the rate of return of businesses having comparable risk taking into account the degree of efficiency achieved and the performance of the company in providing the service. No assurances can be given that the rules to be promulgated by ENARGAS will result in rates that will enable us to achieve specific earnings levels in the future.

Since January 1, 2000, however, adjustments to tariffs to reflect PPI variations were suspended, first through an agreement with the Executive Branch and later by a court decision arising from a lawsuit started to determine the legality of tariff adjustments through indexes. In light of this situation, we continued recording the higher incomes derived from semi-annual PPI increases until December 31, 2001. However, since the approval of the Public Emergency Law, we deemed that tariff adjustments to reflect PPI—which was legitimate according to the regulatory framework agreed upon in the privatization—had become unlikely, as the possibility of its recovery was subject to future events beyond our control. Therefore, in 2001, we recorded a loss of Ps. 126.7 million related to the deferral of semi-annual PPI adjustments accrued during 2000 and 2001, and, since 2002, we have discontinued such accrual.

The Public Emergency Law also granted the Executive Branch power to renegotiate contracts entered into with private utility companies, pursuant to the framework included in the Public Emergency Law. The Public Emergency Law has been extended until December 31, 2011.

In July 2003, UNIREN was created under the joint jurisdiction of the Ministry of Economy and Production and the MPFIPyS. This unit, which is the successor of the former Committee for the Renegotiations of Public Services and Works Contracts, is conducting the renegotiation of contracts related to utilities and public works, and is empowered to reach total or partial agreements with the licensees and submit proposals regulating the transitory adjustment of tariffs and prices, among other things. No progress was made in our renegotiation process until December 2003, when we discussed preliminary documents with UNIREN, including (i) the renegotiation guidelines, which determined the preparation of an agenda and a schedule for its discussion, (ii) a draft agenda which was outlined in order to deal with main issues such as costs, investments programs and financing, rates of return and tariffs, etc. and (iii) a schedule, which settled for the renegotiation of the regulatory framework.

In July 2004, UNIREN submitted to us a proposal for the adjustment of the contractual terms and conditions of our License, which provides for, among other things, a tariff increase of 10% effective as from January 2005 and an overall tariff review to become effective beginning 2007. Further, it requires our abandonment and the abandonment of our shareholders of any claim or lawsuit resulting from the effects of the Public Emergency Law on our License prior to the effectiveness of a renegotiation of our License, as well a requirement that we hold the Argentine government harmless from any claim or lawsuit filed by our shareholders or reimburse the Argentine government for any amount paid by it to our shareholders in connection with any such claim or lawsuit.

In June and November 2005, we received two proposals from UNIREN. These proposals provided for a tariff increase of 10% and an overall tariff review, and required our and our shareholders' abandonment of any claim or lawsuit resulting from the effects of the Public Emergency Law on the License prior to the effectiveness of a renegotiation of the License, and also demanded us to hold the Argentine government harmless from any claim or lawsuit filed by our shareholders. Additionally, said proposals required our and our shareholders' abandonment of any future claim or lawsuit regarding the PPI tariff adjustments which were not applied in 2000 and 2001. We responded to the proposals, by declaring that the original 10% increase was insufficient and committed not to file any administrative, arbitration or judicial claim or lawsuit in Argentina or abroad, as long as a reasonable renegotiation agreement was reached. Moreover, we stated that we are determined to make our best efforts to obtain similar commitments from our investors.

In November 2005, in response to the requirement made by the UNIREN, CIESA and Petrobras Argentina (as CIESA's shareholder) confirmed that they had not initiated or intended to initiate in the future any claim against the Argentine government. However, two of our shareholders at the time — Ponderosa as a controlling company of EPCA, currently CIESA's minority shareholder, and Enron Argentina CIESA Holding S.A. ("EACH") — informed us of the existence of a claim which, jointly with Enron, had been initiated against the Argentine government before the ICSID, an affiliate of the World Bank, and stated that it would only consider waiving its claim if Ponderosa has received fair compensation. The subsequent history of this claim and related developments is described above under "A. Our History and Development—General—Controlling shareholders".

On October 9, 2008, we signed a transitional agreement with the UNIREN that contemplated a tariff increase of 20%, which is retroactively applicable to September 1, 2008. According to this agreement, the funds generated by this tariff increase would be temporarily deposited in a trust fund until we needed them to carry out an investment plan for its pipeline system. However, as the tariff increase has not been granted yet, the entire of the investment plan has been executed with our own funds.

On December 3, 2009, the Executive Branch ratified this transitional agreement through the Presidential Decree No. 1,918/09. By means of this Decree, we will be able to bill the tariff increase to our clients as soon as ENARGAS publishes the new tariff schedule and sets the methodology to bill the retroactive effect. However, ENARGAS has not carried out these duties and due to this delay, in August 2010, we requested ENARGAS authorization to issue the tariff schedule including the 20% transitory tariff increase and the retroactive collection methodology, and the application of an interest rate in line with the established method of payment. ENARGAS responded to us that they had submitted the records and the tariff project to the SCyCG, which is under the scope of the MPFIPyS, based on the Resolution No. 2000/2005 of the MPFIPyS.

On September 30, 2010, we filed an *acción de amparo* (a summary proceeding to guarantee constitutional rights) against the ENARGAS and the SCyCG in order to obtain the implementation of the new tariff increase schedule. On October 25, 2010, the ENARGAS and the SCyCG provided the information required by the Judge on October 19, 2010. On November 8, 2010 we were served notice of the judgment that upheld the injunction filed by us. Said judgment orders the SCyCG to return to ENARGAS -within a two-day period- the documents remitted by ENARGAS in connection with the tariff schedule applicable to us under Decree No. 1,918/09; and orders the ENARGAS -within two days following reception of said documents- to set the tariff schedule and the retroactive collection methodology. ENARGAS and the SCyCG filed an appeal against the judgment that upheld the *acción de amparo* filed by us.

Moreover, on November 16, 2010, we received an invitation from the UNIREN in order to move forward with the renegotiation of the License Agreement within the scope and in the terms of the Public Emergency Law, to which end the UNIREN requires the suspension of claims, appeals, or administrative or judicial action taken against the Argentine government in connection with or arising from the Renegotiation Process of remuneration under the License Agreement. On November 18, 2010, we decided to authorize the suspension of the *acción de amparo* mentioned above for a twenty- working-day period automatically renewable at the expiration of said term (unless the Board before or at the expiration of each period decides not to renew it)

in order to move forward with the renegotiation of the License Agreement. On December 28, 2010, we requested the ENARGAS and the MPFIPyS to join our request to suspend the *acción de amparo*, and as of the date of this Annual Report, we have not received any favorable response in this matter.

On April 5, 2011, the Second Chamber of the Court of Appeals in administrative federal matters set a 60 business day term for the SCyCG to act according to the provisions of Resolution No. 2000/2005 and return to ENARGAS the documents remitted by ENARGAS in connection with the tariff increase schedule and for the ENARGAS to decide –within a 60 business day term following reception of said documents and verification of compliance with the provisions set forth in the transitory agreement dated October 9, 2008, on the tariff adjustment and the transitional tariff schedule stipulated therein. We and the ENARGAS filed an extraordinary appeal before the Court of Appeals, which were dismissed by the Court of Appeals on May 27, 2011. We cannot offer any assurance as to when ENARGAS will publish the tariff schedule and set the methodology.

According to the transitional agreement, we should reach an agreement with the UNIREN on the terms and conditions of the overall renegotiation before the expiration date under the Public Emergency Law on December 31, 2011. If we do not reach this agreement, then UNIREN would inform the Executive Branch and provide it with recommendations for the procedural steps to follow.

In this regard, in October 2008, we received a proposal for a comprehensive license renegotiation agreement from the UNIREN (which includes the initial 20% tariff increase). As of the date of this Annual Report, we are still evaluating the terms of this proposal and negotiating with the UNIREN.

Certain Restrictions with Respect to Essential Assets. A substantial portion of the assets transferred by GdE were defined in our License as essential to the performance of the licensed service. Pursuant to our License, we are required to segregate and maintain the essential assets, together with any future improvements thereon, in accordance with certain standards defined in our License.

We may not for any reason dispose of, encumber, lease, sublease or lend essential assets for purposes other than the provision of the licensed service without ENARGAS's prior authorization. Any extensions or improvements that we make to the gas pipeline system may only be encumbered to secure loans that have a term of more than one year to finance such extensions or improvements.

Upon expiration of our License, we will be required to transfer to the Argentine government or its designee the essential assets specified in our License as of the expiration date, free of any debt, encumbrance or attachment, receiving compensation equal to the lower of the following two amounts:

- the net book value of the essential assets determined on the basis of the price paid by CIESA for shares of our common stock plus the original cost of subsequent investments carried in U.S. dollars in each case adjusted by the PPI, net of accumulated depreciation in accordance with the calculation rules to be determined by ENARGAS (since the enactment of Public Emergency Law, this provision may no longer be valid); or
- the net proceeds of a new competitive bidding.

Under Argentine law, an Argentine court will not permit the enforcement of a judgment on any of our property located in Argentina which is determined by the courts to provide essential public services. This may adversely affect the ability of a creditor to realize a judgment against our assets.

Under a transfer agreement we entered into in connection with the privatization of GdE (the “**Transfer Agreement**”), liabilities for damages caused by or arising from the GdE assets are allocated to either GdE or us depending whether any such damage arose or arises from the operation of the assets prior to or following the commencement of our operations (“**Takeover Date**”). Also, pursuant to the Transfer Agreement, we are responsible for any defects in title to such assets, although any such defects are not expected to be material. The Transfer Agreement further provided that GdE was responsible for five years until December 1997 for the registration of easements related to the system which were not properly recorded and for the payment to property owners of any royalties or fees in respect thereof. Since 1998, we have been responsible for properly recording any remaining easement agreements and for making payments of royalties or fees related to such easements. See “Item 8. Financial Information.”

Competition

Our gas transportation business faces only limited direct competition. Although there are no regulatory limitations on entry into the business of providing gas transportation services in Argentina, the construction of a competing pipeline system would require substantial capital investment and the approval of ENARGAS. Moreover, as a practical matter, a direct competitor would have to enter into agreements with distribution companies or end-users to transport a sufficient quantity of gas to justify the capital investment. In view of our current firm transportation contracts with our distribution company customers, and the other characteristics of the markets in which we operate, management believes that it would be very difficult for a new entrant to the transportation market to pose a significant competitive threat to us, at least in the short to intermediate term. In the longer term, the ability of new entrants to successfully penetrate our market would depend on a favorable regulatory environment, an increasing and unsatisfied demand for gas by end-users, sufficient investment in downstream facilities to accommodate increased delivery capacity from the transportation systems and the finding of significant natural gas reserves.

To a limited extent we compete with TGN on a day-to-day basis for interruptible transportation services and from time-to-time for new firm transportation service made available as a result of expansion projects to the distribution companies to whom both we and TGN are either directly or indirectly connected (Camuzzi Pampeana, MetroGas and BAN). We compete directly with TGN for the transportation of gas from the Neuquén basin to the greater Buenos Aires area.

Additionally, this situation will be affected by the operation of the MEG, which by Decree requires that all firm transportation capacity not allocated for the following day must be marketed through the MEG and the proceeds from that capacity sale must be used in accordance with the Federal Energy Bureau's requirements. For further information, see "Item 4. Our Information—Business Overview—Gas Transportation—The Argentine Natural Gas Industry."

The cost of gas relative to competing fuels may also affect the demand for transportation services in the long term. The delivery cost of gas to end-users in Argentina, based on energy content, is currently significantly lower than other alternative fuels, except for hydroelectric power.

Currently the Noreste pipeline is the most important pipeline project, lead by the Argentine government, which will connect the Bolivian natural gas basins with the northeastern region of Argentina and the greater Buenos Aires region. The transportation capacity of this pipeline is anticipated to be approximately 978 MMcf/d. In March 2010, the governments of Argentina and Bolivia signed an addendum to the agreement entered into by both countries in 2006, with the purpose of achieving a 706 MMcf/d increase in natural gas imports, to be implemented in stages as from the year 2011, along a 20-year term.

In addition, the Argentine government, through the national company ENARSA, is currently assessing the advisability of building two liquefied natural gas regasification plants (in Bahía Blanca and in Uruguay) intended to cover the natural gas market deficit.

These large new projects might reduce future investments in the exploration of fields from which we transport gas and consequently could decrease the volumes transported, adversely affecting our revenues from the gas transportation and liquids production and commercialization business segments.

LIQUIDS PRODUCTION AND COMMERCIALIZATION

Liquids production and commercialization activities are not subject to regulation by ENARGAS. However, over recent years, in order to guarantee sufficient supply of LPG for the local market at low prices, the Argentine government enacted Law No. 26,020, which is described in further detail below.

Our liquids production and commercialization activities are conducted at our Cerri Complex, which is located near the city of Bahía Blanca. In the Cerri Complex, ethane, LPG and natural gasoline are extracted from the natural gas, which arrives through three main pipelines from the Neuquén and Austral gas basins. The owners of the extracted liquids are required to make in-kind deliveries of additional gas to replace their attributable share of the natural gas shrinkage, fuel and losses associated with the extraction of liquids from the gas. The results of our liquids production and commercialization segment are subject to risks associated with commodity price changes. We do not currently hedge against commodity price risk.

We operate our liquids business under two different types of contractual arrangements:

- Liquids production and commercialization for our own account: Under this type of arrangement, the liquids products obtained at our Cerri Complex belong to us. We purchase natural gas in order to replace thermal units consumed in the liquids production process and agree with the natural gas distributors and certain producers on the payment of richness contribution incentives in order to maximize the liquids production in the Cerri Complex. This category of our liquids business is most important in terms of revenue, percentage of transactions and profit.
- Liquids production and commercialization on behalf of third parties: We also process natural gas and market the liquids products in exchange for a commission based on a percentage of the sale price. In some cases we process the natural gas and deliver the liquids products to the gas producers who pay us a percentage on average monthly sale price obtained from our sales in the domestic or international markets (depending on the contract).

In the local market, we sell our production of propane to marketers at prices set semi-annually by the Federal Energy Bureau. On September 30, 2008 the Federal Energy Bureau and LPG producers, among others, signed an agreement on the price stabilization of the butane bottles whereby the industry players committed to a substantial reduction in the price of butane bottles from October 1, 2008, to support low-income consumers. This price reduction is partially offset by a subsidy paid by a trust fund created for that purpose. This trust fund receives the funds provided by the rise in the wellhead natural gas price which was authorized by the Argentine government.

We sell our LPG exports to Petredec Limited under an export agreement that started on January 1, 2011, following a private bidding process that resulted in a significant improvement for us in terms of prices. The contract provides for sales of approximately 248,017 short tons at the price quoted in Mont Belvieu, Texas, plus a fixed charge per metric ton. The contract will expire on April 30, 2012.

We also export natural gasoline to Trafigura Beheer B.V. Amsterdam, under an export agreement which came into effect on January 1, 2010 and will expire on June 30, 2011. This agreement provides for sales of approximately 10,741 short tons per month at NWE Ara price, less a fixed discount per metric ton.

Ethane is sold to PBB under a 10-year agreement that will expire on December 31, 2015. The minimum volume of ethane committed by us to sell PBB is 370,376 short tons per year. The price was fixed until December 31, 2007. Since then, at the beginning of each year the price has been subject to an annual adjustment based on various factors including the PPI (which variation cannot be higher than 1% per year), the natural gas price, the quality of the ethane shipped by us and the transportation tariffs and charges. In 2008, the price was approximately 20% higher than the initial price and in 2009 which increased by 10% over the 2008 price. The prices for 2011 and 2010 each increased 8% per annum over the prior year's price.

This business segment also comprises storage and dispatch by truck and subsequent shipment of the liquids extracted at the Cerri Complex in facilities located in Puerto Galván. LPG and natural gasoline are transported via two eight-inch pipelines to the loading terminal at Puerto Galván. Ethane is piped via an eight-inch pipeline to the PBB olefins plant, which is the sole outlet for ethane from the Cerri Complex. Any ethane extracted in the Cerri Complex which cannot be sold to PBB is reinjected into the pipeline.

The liquids production and commercialization segment increased its percentage of our total revenues from 19% in 2001 to 61% in 2010, as a consequence of the adverse change in the regulated gas transportation segment, and the rises in the international prices of LPG and natural gasoline experienced during recent years (despite the temporarily sharp decline in the fourth quarter of 2008), which generated higher revenues principally from exports. The negative impact of lower international prices and, to a lesser extent, of lower LPG exports were offset by the effect of the Argentine peso devaluation on the revenues stated in this currency. If prices remain low, it could have a significant adverse effect on our future earnings from this market.

The annual sales of the Cerri Complex for 2010, 2009 and 2008 in short tons were as follows:

	<u>2010</u>	<u>2009</u>	<u>2008</u>
Ethane.....	334,455	358,801	326,281
LPG	544,856	526,275	550,325
Natural gasoline	111,395	109,748	119,266
Total.....	<u>990,706</u>	<u>994,824</u>	<u>995,872</u>

Our management anticipates that future expansions on the pipeline system will provide new opportunities in the liquids production and commercialization business and lead to related increases in revenues from our gas transportation and liquids production and commercialization businesses.

Since 2007, the Cerri Complex has experienced natural gas supply interruptions in the colder months as imposed by the Argentine government in order to increase the supply to households and thermoelectrical plants, considering the higher costs of alternative fuels and the reduction in natural gas production. These natural gas supply interruptions have been decreasing as a consequence of the growing imports of natural gas, which have been injected in the pipeline system by a liquefied natural gas regasification vessel. This vessel operated from the beginning of June to mid-September in 2008, May to mid-September in 2009 and most of 2010, and provided the local market increasing quantities of natural gas which amounted 15.5 Bcf, 27.6 Bcf and 63.0 Bcf in 2008, 2009 and 2010, respectively.

Law No. 26,020, enacted in April 2005, set the framework through which the Federal Energy Bureau establishes regulations meant to cause LPG suppliers to guarantee supply and price stability of said products in the domestic market. Consequently, we are not able to select freely the markets to allocate LPG production and need a written authorization from Federal Energy Bureau for each export operation. As we are effectively required to meet domestic demand before exporting significant amounts of LPG, we forego revenues from foreign markets with higher prices than those established for local consumers, which have remained fixed since September 2005 by the Federal Energy Bureau, in order to satisfy the minimum market demand stated by the Federal Energy Bureau.

Since 2002, LPG and natural gasoline exports have been subject to a tax on export. In May 2004, the effective tax rate for LPG exports was increased from 4.76% to 16.67%. On May 24, 2007, it was increased to 20%.

Since November 2007 and March 2008, a variable export tax regime has been in force for the natural gasoline and LPG exports, respectively, with a minimum effective tax rate of 31.03% when international prices are lower than US\$1,094 and US\$663 per metric ton (or US\$992 and US\$601 per short ton, respectively), respectively. If international prices exceed these amounts, the marginal tax rate applicable to the excess is 100%. As a result of this export tax regime, we are unable to obtain post-tax prices of more than US\$754 and US\$457 per metric ton (or US\$684 and US\$415 per short ton, respectively) of natural gasoline and LPG, respectively.

Competition

Repsol-YPF, together with Petrobras Petroleo Brasileiro and Dow Chemical, created Compañía MEGA S.A. (“MEGA”), which, at the end of 2000, finished building and began operation of a gas processing plant with a capacity of approximately 1.3 Bcf/d, located in the Province of Neuquén. Any resulting lower production associated with gas with lower liquids content arriving at the Cerri Complex, as well as any other project that eventually may be developed upstream of the Cerri Complex, could adversely affect our revenues from liquids production and commercialization services. To minimize the revenue impact of any project developed upstream of the Cerri Complex, since 2000, we have signed agreements with gas producers and distributor customers to maximize the richness of the gas to be processed at the Cerri Complex in order to have access to the associated liquids. Since 2005, we have agreed with major gas producers to process their natural gas in the Cerri Complex, and we obtained their commitment to not build gas processing plants upstream of the Cerri Complex during the term of the agreements (10-year term in the case of those agreements signed in 2005 and 5-year term in those agreements entered into since 2006). We are currently negotiating with gas producers for new agreements to replace those expiring at the end of 2011.

OTHER SERVICES

Other services activities are not subject to regulation by ENARGAS.

Our other services are mostly comprised of midstream activities and telecommunication services. Through midstream services, we provide integral solutions related to natural gas from wellhead up to the transportation systems. The services comprise gas gathering, compression and treatment, as well as construction, operation and maintenance of pipelines, which are generally rendered to natural gas and oil producers at wellhead. Our portfolio of midstream customers also includes distribution companies, big industrial users, power plants and refineries. Our midstream activities include the separation and removal of impurities such as water, carbon dioxide and sulfur from the natural gas stream. Small diameter pipes from the wellheads form a network, or gathering system, carrying the gas stream to larger pipelines where field compression is sometimes needed to inject the gas into our large diameter gas pipelines. The services are tailored to fit the particular needs of each customer in technical, economic and financial matters, and are rendered directly or through the subsidiaries Gas Link S.A. (“**Link**”) and Emprendimientos de Gas del Sur S.A. (“**EGS**”).

During 2010, we renewed some of our service contracts related to other services, which will help to ensure the performance of the business in the mid-term.

In 2010, in addition to treatment and compression services rendered to several producers, such as Pluspetrol Energy S.A., YPF S.A., Petrobras Argentina, we provided a range of technical services related to connection to the transportation system, engineering inspection, project management, works inspection audits, dispatch management, professional technical counseling and instrument gauging tasks. Our customers of these services, include, among others, Aluar, Emgasud S.A., ENARSA, YPF S.A., Tecpetrol S.A., Profertil S.A., Arpetrol S.A. and Roch S.A.

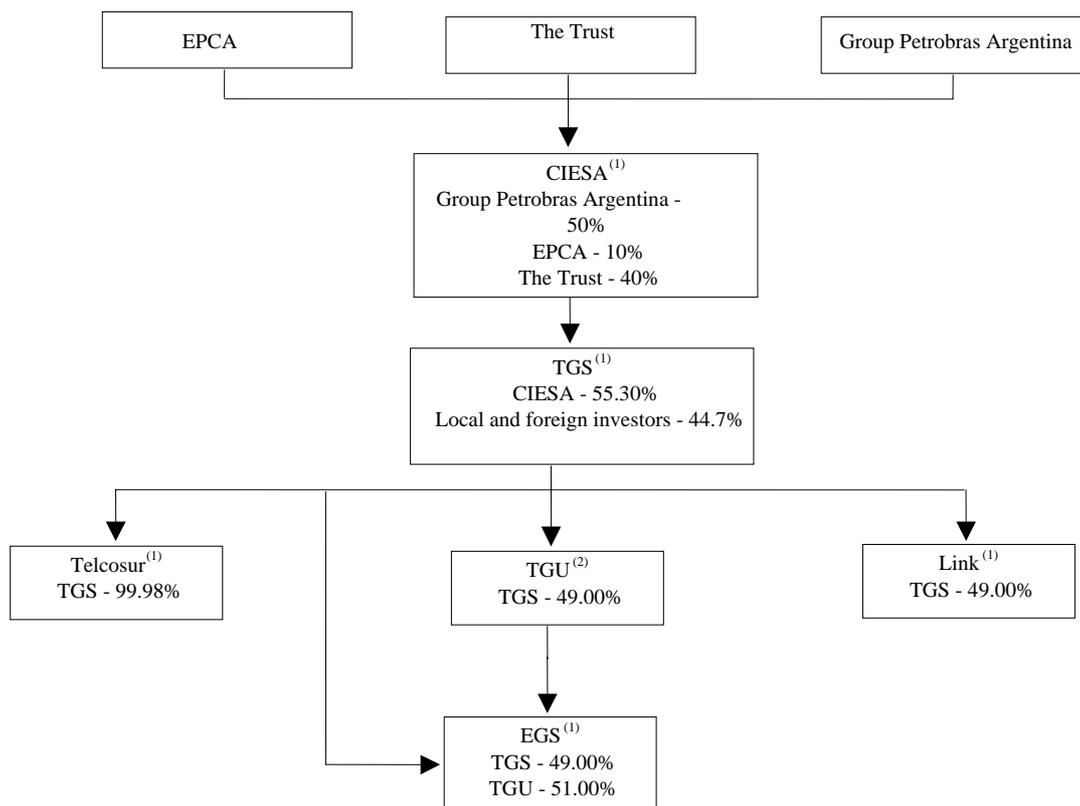

Telcosur (Telecommunications System)

We own 99.98% of Telcosur, a telecommunications company formed in September 1998 for the purpose of providing value-added and data transportation services through the use of our modern digital land radio telecommunications system with Synchronous Digital Hierarchy (“**SDH**”) technology (which was installed for purposes relating to our gas transportation system).

In 2010, Telcosur entered into agreements for the extension of existing agreements and closed new deals with telecommunication companies (“carriers”) and corporate customers in order to consolidate business both in the mid and long term. In addition, Telcosur has made progress in the implementation of its hybrid network, of radio and optic fiber throughout its whole area of service, by means of the execution of agreements with telecommunications infrastructure suppliers and the implementation of several expansion works.

C. Organizational Structure

The following is a summary diagram of our subsidiaries and affiliates as of the date of this Annual Report, including information about ownership and location:

(1) Incorporated in Argentina
 (2) Incorporated in Uruguay

D. Property, Plant and Equipment

Gas Transportation

The principal components of the pipeline system we operate are as follows:

Pipelines. We render gas transportation service through a pipeline system 5,598 miles long, of which we own 4,754 miles. The system consists primarily of large diameter, high pressure pipelines intended for the transportation of large volumes of gas at a pressure of approximately 60-70 kg/cm². Line valves are installed on the pipeline at regular intervals, permitting sections of the pipeline to be isolated for maintenance and repair work. Gas flow regulating and measurement facilities are also located at various points on the system to regulate gas pressures and volumes. In addition, a cathodic protection system has been installed to protect the pipeline from corrosion and significantly reduce metal loss. All of the pipelines are located underground or underwater.

Maintenance bases. Maintenance bases are located adjacent to the gas pipeline system in order to maintain the pipeline and related surface facilities and to handle any emergency situations which may arise. Personnel at these bases periodically examine the pipelines to verify their condition and inspect and lubricate pipeline valves. Personnel at the bases also carry out a cathodic protection system to ensure that adequate anti-corrosion systems are in place and functioning properly. They also maintain and verify the accuracy of measurement instruments to ensure that these are functioning within appropriate industry standards and in accordance with the specifications contained in our service regulations.

Compressor plants. Compressor plants along the pipelines recompress the gas volumes transported in order to restore pressure to optimal operational levels, thereby ensuring maximum use of capacity as well as efficient and safe delivery. Compressor plants are spaced along the pipelines at various points (between 62 and 124 miles) depending upon certain technical characteristics of the pipelines and the required pressure for

transport. Compressor plants include turbine-driven compressors or motor-driven compressors which use natural gas as fuel, together with electric power generators to supply the complementary electrical equipment (control and measurement devices, pumping, lighting, communications equipment, etc.).

We transport gas through four major pipeline segments: General San Martín, Neuba I, Neuba II and Loop Sur, as well as several smaller gas pipelines. Information with respect to certain aspects of our main gas pipelines as of December 31, 2010, is set out in the table below:

Major Pipeline	Length Miles	Diameter (inches)	Maximum Pressure (kg/cm ²)	Compressor Units	Operative Compressor Plants	HP Output
General San Martín	2,084	24/30	60	56	17	459,300
Neuba I/Loop Sur	732	24/30	60	15	5	61,300
Neuba II	1,064	30/36	70	21	6	188,400
Other ⁽¹⁾	874	Various	Various	6	3	7,500
Total	4,754			98	31	716,500

(1) Includes 247 miles of transfer pipelines throughout the pipeline system, as well as the Cordillerano pipeline, with a length of 239 miles.

General San Martín. This pipeline was built in three stages, completed in 1965, 1973 and 1978, and transports gas from the extreme southern portion of Argentina to the greater Buenos Aires area in east-central Argentina. It originates in San Sebastián (Tierra del Fuego), passes through the Straits of Magellan and the Provinces of Santa Cruz, Chubut, Río Negro and Buenos Aires (including the Cerri Complex located near the city of Bahía Blanca in central Argentina), and terminates at the high pressure transmission ring around the city of Buenos Aires. The pipeline receives natural gas from the Austral basin at the extreme south in Tierra del Fuego, from the same basin further north at El Cóndor and Cerro Redondo, in the Province of Santa Cruz and from the San Jorge basin in northern Santa Cruz and southern Chubut provinces. The pipeline serves principally the districts and cities of Buenos Aires, La Plata, Mar del Plata, Bahía Blanca and Comodoro Rivadavia.

Additionally, as we discussed in “Item 4. Our Information—B. Business Overview—Gas Transportation—Pipeline Operations—Pipeline Expansions”, in recent years this pipeline has been expanded by the Gas Trust in order to satisfy the growing gas demand in the Argentine economy.

Neuba I (Sierra Barrosa-Bahía Blanca). Neuba I was built in 1970 and was expanded by us in 1996. It is one of our two main pipelines serving our principal source of gas supply, the Neuquén basin. The pipeline originates in west-central Argentina at Sierra Barrosa (Province of Neuquén), passes through the provinces of Río Negro, La Pampa and Buenos Aires, and terminates at the Cerri Complex. This pipeline transports the gas received from the Neuquén basin, particularly from the Sierra Barrosa, Charco Bayo, El Medanito, Fernández Oro, Lindero Atravesado, Centenario, Río Neuquén and Loma de la Lata gas fields. The gas delivered from Neuba I is subsequently compressed and injected into the Loop Sur and the General San Martín pipelines for transportation north to the greater Buenos Aires area.

Loop Sur. This gas pipeline was built in 1972 as an extension of Neuba I and runs parallel to a portion of the General San Martín gas pipeline. Located in the province of Buenos Aires, it transports gas from the terminus of Neuba I at the Cerri Complex at Bahía Blanca and terminates at the high pressure transmission ring around Buenos Aires, which we also operate. The gas delivered by this gas pipeline constitutes a portion of the gas supply for the greater Buenos Aires area. Loop Sur is also connected to the TGN system and allows us to deliver gas to or receive gas from TGN. Such transfers occur occasionally during periods of high demand for gas.

Neuba II. Our newest pipeline, Neuba II, was built in 1988, was expanded four times between 1996 and 2000 and is our other pipeline serving the Neuquén basin. Neuba II begins at Repsol-YPF’s Loma de la Lata gas treatment plant in the western portion of the basin and runs through the provinces of Neuquén, Río Negro, La Pampa and Buenos Aires (through the Cerri Complex), up to its terminal station located at Ezeiza just outside of Buenos Aires. Neuba II is a principal source of gas for the Federal District and the greater Buenos Aires area.

Other Pipelines. Our other pipelines include the Cordillerano pipeline, built in 1984, which receives gas from the Neuquén Basin and supplies it mainly to three tourist centers in southern Argentina. In addition, we operate other minor pipelines, the high pressure transmission ring around Buenos Aires, the Chelforó-Conesa pipeline and other pipelines known as gas transfer pipelines.

Information regarding gas transportation system expansion is included in “Item 4. Our Information—B. Business Overview—Gas Transportation—Pipeline Operations—Pipeline Expansions.”

Ancillary Facilities

Cathodic Protection System

Currently, we operate more than 200 cathodic protection devices, which are located along our main pipelines. The objective of this system is to prevent the corrosion process on the pipes’ surface. The corrosion process causes metal loss, which, depending on the severity of the damage, may cause pipeline ruptures. Cathodic protection equipment includes DC rectifiers, generators powered by thermic, turbine natural gas engines in locations where no electric lines are available. The system also includes an impressed current-deep anode, which facilitates circulation of electricity through the circuit formed by the generator, the anode itself, the pipe and the land.

Gas Control System

Located at our Buenos Aires headquarters, the gas control system controls scheduled gas injections and deliveries and allows us to follow gas flows in real time. Data is received from compressor stations by phone and automatically from remote terminal units (“RTUs”) installed in the receipt and delivery points equipped with the EFM system. The information is normally collected by the Supervisory Control and Data Acquisition (“SCADA”) system (which has an ad-hoc database that is updated every 30 seconds on average) and is then consolidated into other databases. In order to control gas injection and deliveries, we have developed a software system called *Solicitud, Programación, Asignación y Control* (“SPAC”), which, among other things, allows us to control actual volumes and projected future injections to determine producer deviations. As part of this system, we operate meteorological equipment and receive daily weather information from various sources, which is used for the purpose of forecasting gas demand.

Gas Measurement

Shipped and delivered gas is measured through primary field facilities that are connected with RTUs. Such RTUs transmit the data to the Buenos Aires headquarters. This data is utilized to prepare reports for clients, shippers, producers and ENARGAS. Energy balances are also prepared in order to control our system efficiency.

Liquids production and commercialization

Our liquids production and commercialization activities are conducted at our Cerri Complex. It is located near the city of Bahía Blanca and is connected to each of our main pipelines. The Cerri Complex consists of an ethane extraction cryogenic plant to recover ethane, LPG and natural gasoline, together with a lean oil absorption plant to recover LPG and natural gasoline. The facility also includes compression, power generation and storage facilities. The Cerri Complex processing capacity is approximately 1.7 Bcf/d.

As part of the Cerri Complex, we also maintain at Puerto Galván a storage and loading facility for the natural gas liquids extracted at the Cerri Complex. The Cerri Complex, including the Puerto Galván facility, is currently capable of storing 60,450 short tons. See “—Business Overview—Liquids Production and Commercialization” above.

Other Services

Midstream

As part of this business segment, we provide services relating to natural gas including treatment, gathering and gas compression, which are rendered at four treatment plants located in the gas fields with a total capacity of 134 MMcf/d and three gas compression plants with a total capacity of 35,600 HP. The following chart shows summary information regarding the treatment and compression plants’ capacity as of December 31, 2010:

	<u>Treatment capacity (in MMcf/d)</u>	<u>Compression capacity (in HP)</u>
Río Neuquén	85	27,000
Plaza Huincul	28	5,200
BRTF	21	3,400
Total	<u>134</u>	<u>35,600</u>

Telecommunication

We own two interconnected networks in Buenos Aires Province which consist of: (i) a flexible and modern microwave digital network with SDH technology and more than 2,859 miles, which covers the routes: Buenos Aires – Bahía Blanca – Neuquén to the West, Buenos Aires – Bahía Blanca – Comodoro Rivadavia – Río Grande to the South; (ii) a dark fiber optic network, with approximately 1,056 miles, which covers the routes: La Plata – Buenos Aires – Rosario – Córdoba – San Luis – Mendoza; and a network in the Patagonia which consists of a dark fiber optic network, with approximately 374 miles which covers the route Puerto Madryn – Pico Truncado.

In addition, the following networks were incorporated in 2009: (i) a high capacity fiber optic network of approximately 745 miles which links Buenos Aires – Bahía Blanca – Neuquén; (ii) a dark fiber optic network, with approximately 497 miles, which covers the route Bahía Blanca – Puerto Madryn; (iii) a high capacity fiber optic network of approximately 497 miles which links Pico Truncado – Río Gallegos.

Safety, Occupational Health, Environment & Quality

We believe that our current operations are in compliance with applicable laws and regulations related to the protection of the environment. Over the past decade, we have consistently studied, monitored and improved our policies with regard to environmental issues.

Regarding our commitment to quality, environment and safety, outlined in our Quality, Environment, Safety and Occupational Health Policy, currently, we maintain the certifications of ISO 9,001, ISO 14,001 and OHSAS 18,001.

We have established an environmental and industrial safety investment plan for the period of 2011-2013 with a budget of approximately US\$ 20.2 million.

Insurance

We maintain insurance, subject to deductibles, against third-party liability, damage to our pipeline assets that pass under rivers or other bodies of water and the Straits of Magellan and business interruption. We believe this coverage is consistent with standards for international natural gas transportation companies. The terms of the policies related to the regulated assets have been approved by ENARGAS. In addition, we have obtained insurance coverage for our directors and officers.

Item 4A. Unresolved Staff Comments

We do not have any unresolved staff comments.

Item 5. Operating and Financial Review and Prospects

A. Operating results

The following Operating and Financial Review and Prospects should be read in conjunction with “Item 3. Key Information—A. Selected Financial Data” and our Financial Statements as of December 31, 2010 and 2009 and for the years ended December 31, 2010, 2009 and 2008 and the report of our registered public accounting firm included elsewhere herein. Such Financial Statements have been prepared in accordance with Argentine GAAP and the regulations of the CNV. See Note 12 to our Financial Statements for a description of the main differences between Argentine GAAP and US GAAP as they relate to us, and a reconciliation to US GAAP of net income and total shareholders’ equity. The differences involve methods of measuring the amounts shown in the consolidated Financial Statements as well as additional disclosures required by U.S. GAAP and Regulation S-X of the SEC.

This Operating and Financial Review and Prospects discussion contains forward-looking statements that involve certain risks, uncertainties and assumptions. These forward-looking statements can be identified by the use of forward-looking terminology such as “may,” “will,” “will likely result,” “intend,” “projection,” “should,” “believe,” “expect,” “anticipate,” “estimate,” “continue,” “plan” or other similar words. Our actual results may differ materially from those identified in these forward-looking statements. For more information on forward-looking statements, see “Cautionary Statement Regarding Forward-Looking Statements”. In addition, for a discussion of important factors, including, but not limited to, the pesification of our tariffs and other factors that could cause actual results to differ materially from the results referred to in the forward-looking statements, see “Item 3. Key Information—D. Risk Factors.”

For information relating to the presentation of financial information see “Presentation of Financial and Other Information”.

Critical accounting policies and estimates

Except as further discussed under “Presentation of Financial and Other Information,” we prepare our Financial Statements in pesos and in accordance with Argentine GAAP and the regulations of the CNV, which differ in certain significant respects from US GAAP. For a description of the principal differences between Argentine GAAP and US GAAP as they relate to us and a reconciliation to US GAAP of net income and shareholders’ equity as of December 31, 2010 and 2009 and for the years ended December 31, 2010, 2009 and 2008, see Note 12 to our Financial Statements.

In connection with the preparation of our Financial Statements included in this Annual Report, we have relied on assumptions derived from historical experience and various other factors that we deemed reasonable and relevant. Although we review these assumptions in the ordinary course of our business, the presentation of our financial condition and results of operations often requires management to make judgments regarding the effects of matters that are inherently uncertain. Actual results may differ from those estimated as a result of these different assumptions. We have described each of the following critical accounting policies and estimates in order to provide an understanding about how our management forms judgments and views with respect to such policies and estimates, as well as the sensitivity of such policies and estimates:

- impairment of long-lived assets; and
- provision for allowances and contingencies.

Impairment of Long-Lived Assets

As a matter of policy, we evaluate the carrying value of our long-lived assets on a segment-by-segment basis in December of each year. In addition, we periodically evaluate the carrying value of our long-lived assets for impairment when events or changes in circumstances indicate that the carrying amount of an asset may not be recoverable.

Prior to January 1, 2006, both under Argentine GAAP and US GAAP, we considered the carrying value of a long-lived asset to be impaired when the expected undiscounted cash flows from such asset were separately identifiable and less than its carrying value. In that event, a loss was recognized based on the amount by which the carrying value exceeded the fair market value of the long-lived asset. We determined the fair market value

primarily using projected cash flows discounted at a rate commensurate with the risk involved or independent appraisals, as appropriate.

Effective January 1, 2006, as a result of the adoption of new accounting standards by the CNV, under Argentine GAAP, we consider the carrying value of a long-lived asset to be impaired when the expected cash flows from such asset are separately identifiable and less than its net carrying value. Expected cash flows are determined primarily using the anticipated cash flows discounted at a rate commensurate with the risk involved. The adoption of this accounting standard has had no impact in our results of operations or financial position.

Under US GAAP, we continue to apply the provisions of FASB Accounting Standards Codification (“ASC”) 360 (“ASC 360”). As indicated above, under ASC 360, the carrying value of a long-lived asset is considered impaired when the expected undiscounted cash flows from the asset are separately identifiable and less than its carrying value. In that event, a loss is recognized based on the amount by which the carrying value exceeds the market value of the long-lived asset.

There has been no impairment during the three years ended December 31, 2010.

Under Argentine GAAP, a previously recognized impairment loss should only be reversed when there is a subsequent change in estimates used to compute the fair market value of the asset. In that event, the new carrying amount of the asset should be the lower of its fair market value or the net carrying amount the asset would have had if no impairment had been recognized. Both the impairment charge and the impairment reversal are recognized in earnings. US GAAP prohibits the reversal of a previously recognized impairment charge.

We believe that our accounting policy relating to the impairment of long-lived assets is a “critical accounting policy” because:

- It requires our management, in determining fair market value, to make estimates and assumptions (such as, future revenues and cost of revenues) that are highly susceptible to change from period to period.
- The impact that recognizing or reversing an impairment would have on assets reported on our consolidated balance sheet as well as on the results of our operations could be material. Estimates about future revenues require significant judgment because actual revenues have fluctuated in the past and are expected to continue to do so, especially due to the pending tariff renegotiation process.
- In order to project future cash flows, we have made certain estimates in connection with the tariffs adjustments we expect we will have in the future. However, due to the uncertainties surrounding the tariff renegotiation process, these estimates are highly uncertain and there is a substantial risk that these estimates could prove to be materially different from actual future tariffs. In addition, the volatility of the Argentine economy also makes the selection of an appropriate discount rate a highly subjective process.

Provision for Allowances and Contingencies

We provide for losses relating to trade receivable accounts. The allowance for losses is based on management’s evaluation of various factors, including the credit risk of customers, historical trends and other information. While management uses the most current information available to make its evaluations, future adjustments to the allowance may be necessary if future economic conditions differ substantially from the estimated economic conditions used in making these evaluations. Management considers all events and transactions that it believes are relevant to our business and believes it has made reasonable estimates.

We have certain contingent liabilities with respect to legal and regulatory proceedings. We accrue liabilities when it is probable that future costs will be incurred and such costs can be reasonably estimated. Such accruals are based on developments as of the time the accruals are made, estimates of the outcomes of these matters and our lawyers’ experience in contesting, litigating and settling other matters. As the scope of the liabilities becomes better defined, there may be changes in estimates of future costs, which could have a material effect on our financial condition and results of operations.

We believe that our accounting policy relating to the provision for allowances and contingencies is a “critical accounting policy” because:

- It requires our management to make estimates and assumptions that are highly susceptible to change from period to period.
- The impact that recognizing or reversing provisions for allowances and contingencies would have on our consolidated balance sheet as well as on the results of our operations could be material.

Differences between Argentine GAAP and US GAAP

Our Financial Statements and the information shown in this section have been prepared in accordance with Argentine GAAP, which differs in certain significant respects from US GAAP. Such differences involve methods of measuring the amounts shown in the Financial Statements, as well as additional disclosures required by US GAAP and Regulation S-X promulgated by the SEC. The following is a list of the principal differences, other than with regard to inflation accounting, between Argentine GAAP and US GAAP, as they relate to us, that affect the reported amounts under Argentine GAAP of our total shareholders' equity as of December 31, 2010, and 2009 and net income for the years ended December 31, 2010, 2009 and 2008:

- the accounting for income taxes;
- the capitalization of exchange differences arising from the devaluation of the Argentine peso under Argentine GAAP, which are treated as expenses under US GAAP;
- the capitalization of interest costs;
- the deferral of certain pre-operating and organizational expenses under Argentine GAAP, which are expensed as incurred under US GAAP;
- the accounting for tax credits;
- the impact of US GAAP adjustments on equity investees; and
- the accounting for current investments.

Note 12 to our Financial Statements, included elsewhere in this Annual Report, provides a description of the main differences between Argentine GAAP and US GAAP as they relate to us and a reconciliation to US GAAP of shareholders' equity at December 31, 2010 and 2009 and net income for the years ended December 31, 2010, 2009 and 2008. Net income under Argentine GAAP for the years ended December 31, 2010, 2009 and 2008 was approximately Ps. 102.2 million, Ps. 178.4 million and Ps. 175.1 million, respectively, as compared to approximately Ps. 226.1 million, Ps. 132.7 million and Ps. 208.5 million, respectively, under US GAAP. Shareholders' equity under Argentine GAAP as of December 31, 2010, and 2009 was Ps. 3,293.0 million and Ps. 3,221.1 million, respectively, as compared to approximately Ps. 2,633.6 million and Ps. 2,437.8 million, respectively, under US GAAP.

New accounting pronouncements under Argentine GAAP

1. *CNV General Resolution No. 562 (“GR 562”) and No. 576 (“GR 576”) – Adoption of International Financial Reporting Standards (“IFRS”) issued by the International Accounting Standard Board*

On December 29, 2009, CNV issued GR 562 which provides the application of TR No. 26 approved by the Argentine Federation of Professional Councils in Economic Sciences (“**Argentine Federation**”). This TR establishes that certain Argentine companies which are subject to the Argentine Public Offering Regime (Law No. 17,811) will be required to adopt IFRS issued by the International Accounting Standards Board (“**IASB**”). Our IFRS transition date is January 1, 2011 and the application of such standards is effective for financial statements issued for the interim periods and fiscal year beginning January 1, 2012. We prepared an implementation plan for the adoption of said accounting rules under the regulations established by the Resolution No. 562/09, which was approved by the Board of Directors' Meeting held on April 8, 2010. Moreover, we are evaluating the effects of the adoption of IFRS.

On July 1, 2010, the CNV issued GR 576, which extends General Resolution No. 562/09, and, among others, establishes, that the recognition of the deferred tax liability caused by the inflation adjustment included in the accounting value of property, plant and equipment (which amount is disclosed in Note 2.k to the consolidated financial statements, in compliance with CNV General Resolution No. 487) must be recorded with debit to Accumulated Retained Earnings in any interim period or fiscal year-end and until the end of the year immediately preceding the first interim period in which the IFRS will be applied. Consequently, we will recognize this liability in the fiscal year 2011. Moreover, this resolution allows the shareholders' meeting dealing with the approval of the financial statements in which the deferred tax liability was recognized to reallocate the debit to other accounts within Shareholders' Equity, which do not represent shares or reserved earnings.

Accounting pronouncements issued but not yet adopted under US GAAP

The following is a summary of recent changes in US GAAP. We do not believe any of these changes will have a material impact on US GAAP reconciliation of our reported financial results:

1. *Accounting Standards Update No. 2010-17 "Revenue Recognition-Milestone Method (Topic 605): Milestone Method of Revenue Recognition- A Consensus of the FASB Emerging Issues Task Force" ("ASU 2010-17")*

In April 2010, the FASB issued ASU 2010-17, Revenue Recognition—Milestone Method (Topic 605): Milestone Method of Revenue Recognition. This ASU codifies the consensus reached in EITF Issue No. 08-9, "Milestone Method of Revenue Recognition." The amendments to the Codification provide guidance on defining a milestone and determining when it may be appropriate to apply the milestone method of revenue recognition for research or development transactions. Consideration that is contingent on achievement of a milestone in its entirety may be recognized as revenue in the period in which the milestone is achieved only if the milestone is judged to meet certain criteria to be considered substantive. Milestones should be considered substantive in their entirety and may not be bifurcated. An arrangement may contain both substantive and nonsubstantive milestones, and each milestone should be evaluated individually to determine if it is substantive. ASU 2010-17 is effective on a prospective basis for milestones achieved in fiscal years, and interim periods within those years, beginning on or after June 15, 2010. Early adoption is permitted. The Company does not expect the provisions of ASU 2010-17 to have a material effect on the consolidated financial statements.

Factors affecting our consolidated results of operations

Since the onset of the severe economic crisis in Argentina, which began in late 2001, our revenue composition has changed significantly, mainly as a consequence of (i) the substantial devaluation of the peso as compared to the U.S. dollar, (ii) high inflation that occurred in 2002, (iii) the suspension, pursuant to the Public Emergency Law, of adjustments of the regulated tariff for the transportation and distribution of natural gas and (iv) generally increasing international prices of LPG and natural gasoline.

The following table sets forth, for the years indicated the variation in the reported WPI, CPI and the exchange rate between the Argentine peso and U.S. dollar.

	December 31,				
	2010	2009	2008	2007	2006
	<i>(annual % change)</i>				
WPI.....	14.8	10.0	8.8	14.4	7.2
CPI.....	10.5	7.7	7.2	8.5	9.8
Devaluation of pesos vs. U.S. dollar.....	4.6	10.0	9.7	2.8	1.0

Source: INDEC, Banco Nación

At the end of January 2007, the INDEC, which is statutorily the only institution in Argentina with the power to produce official nationwide statistics, experienced a process of institutional reforms, following which, some private analysts have disagreed with the official inflation data (and other economic data affected by

inflation data, such as poverty and GDP estimates) published by INDEC,. Laws and regulations currently governing the Argentine economy may continue to change in the future and these changes may adversely affect our business, financial condition or results of operations. For more information, see “Item 3. Key Information—D. Risk Factors”. Our Financial Statements do not include any adjustments or reclassifications that might result from the outcome of the uncertain economic and political environment in Argentina.

Year to year fluctuations in our net income are a result of a combination of factors, including principally:

- The volume of liquids products we produce and sell;
- Changes in international prices of LPG and natural gasoline;
- Changes in the input costs related to the liquids production and commercialization;
- Fluctuation in the Argentine peso / US dollar exchange rate;
- Local inflation and its impact on costs expressed in Argentine pesos; and
- Changes in laws or regulations affecting our operations, including tax matters.

Discussion of results of operations for the three years ended December 31, 2010, 2009 and 2008

The following table presents a summary of our consolidated results of operations for the years ended December 31, 2010, 2009 and 2008, stated in millions of pesos, and the increase or decrease and percentage of change between the periods presented:

	Year ended December 31,		Year ended December 31, 2010 compared to year ended December 31, 2009		Year ended December 31, 2009 compared to year ended December 31, 2008		
	2010	2009	Variation	Percentage change	2008	Variation	Percentage change
Gas Transportation.....	551.0	669.4	(118.4)	(17.7%)	506.3	163.1	32.2%
Liquids production and commercialization.....	1,010.4	800.5	209.9	26.2%	807.3	(6.8)	(0.8%)
Other services	91.6	130.7	(39.1)	(29.9%)	105.6	25.1	23.8%
Net revenues	1,653.0	1,600.6	52.4	3.3%	1,419.2	181.4	12.8%
Operating costs	(651.3)	(613.1)	(38.2)	6.2%	(557.4)	(55.7)	10.0%
Depreciation and amortization.....	(207.9)	(205.2)	(2.7)	1.3%	(202.4)	(2.8)	1.4%

Income tax expense.....	(99.2)	(143.3)	44.1	(30.8%)	(143.4)	0.1	(0.1%)
Net income.....	102.2	178.4	(76.2)	(42.7%)	175.1	3.3	1.9%

Year 2010 compared to year 2009

Net revenues

Regulated gas transportation segment. Gas transportation service is our main business activity measured by the invested capital and the resources involved in its operation; however, it is not as significant as our liquids production and commercialization business in our total net revenues because of the pesification of regulated tariffs at an exchange rate of US\$ 1=Ps. 1 implemented by the Public Emergency Law. The gas transportation segment represented approximately 33% and 42% of total net revenues earned during the years ended December 31, 2010 and 2009, respectively. A substantial portion of our gas transportation service revenues are derived from firm contracts, under which pipeline capacity is reserved and paid for, regardless of actual usage by the shipper. We also provide interruptible transportation services subject to available pipeline capacity.

Gas transportation revenues for the year ended December 31, 2010 decreased by Ps. 118.4 million compared to 2009. This reduction is mainly due to the accounting in 2009 of Ps. 122.1 million relating to the 20% tariff increase that was retroactive to September 1, 2008. For the reasons described in the following paragraph, we decided to discontinue the recognition of revenue relating to the 20% tariff increase in December 2010 (for further information, see Note 7.a. to our Financial Statements)

Revenues related to interruptible transportation service amount to Ps. 29.5 million and Ps. 25.9 million for the years ended December 31, 2010 and 2009, respectively.

Through Presidential Decree No. 1,918/09, the Argentine government ratified the transitional agreement signed by us and the UNIREN in October 2008. According to this agreement, the funds generated by the tariff increase would be used to carry out an investment plan for our pipeline system which was executed with our funds. The transitional agreement will be in force until the date of the coming into effect of the integral license renegotiation agreement to be signed with the Argentine government. On September 30, 2010, the Company filed an *acción de amparo* (a summary proceeding to guarantee constitutional rights) against the ENARGAS and the SCyCG in order to obtain the implementation of the new tariff increase schedule. ENARGAS and the SCyCG filed an appeal against the judgment that upheld the *acción de amparo* filed by us, and as of the date of this Annual Report, this appeal has not been resolved and ENARGAS has yet not authorized the billing of the tariff increase (for further information, see “Item 4. Our Information—B. Business Overview—Gas Transportation—Regulatory Framework—Adjustment of Rates”).

Liquids production and commercialization segment. Unlike the gas transportation segment, the liquids production and commercialization segment is not subject to regulation by ENARGAS. However, over recent years, in order to guarantee sufficient supply of LPG for local market at low prices, the Argentine government enacted Law No. 26,020, which is discussed further below.

Net revenues from the production and commercialization of liquids segment represented approximately 61% and 50% of our total net revenues during years ended December 31, 2010 and 2009, respectively. Production and commercialization of liquids activities are conducted at the Cerri Complex, which is located near Bahía Blanca and connected to each of the Company’s main pipelines. At the Cerri Complex, we recover ethane, propane, butane and natural gasoline for both our own account and on behalf of our customers. In 2010, we sold approximately 59% of our production of LPG in the local market to LPG marketers (53% in 2009). We sell part of its production of LPG to liquids marketers in the domestic market. In 2010, the remainder of these products and all of its natural gasoline were exported to Petrobras International Finance Company (“**PIFCo**”) and to Trafigura Beheer B.V. Amsterdam, respectively, at current international market prices. Since January 1, 2011, we export LPG to Petredec Limited. Ethane is entirely sold in the domestic market to PBB at agreed prices under a long-term contract. We process and sell some of the liquids for our own account, some on behalf of our customers, and some on a fee basis, collecting a commission for the extracted liquids delivered to our customers.

Revenue from the production and commercialization of liquids segment increased by Ps. 209.9 million in the year ended December 31, 2010. This increase is mainly due to higher export sales, which were driven by more than 30% higher average international prices.

The total annual sales for the Cerri Complex for 2010 and 2009 in short tons, which include liquids sales made on behalf of third parties, from which we withhold fees for production and commercialization, were as follows:

	Years ended December 31,		Year ended December 31, 2010 compared to year ended December 31, 2009	
	(volumes in short tons)		Increase / (decrease)	Percentage change
	2010	2009		
<i>Local market</i>				
Ethane.....	334,455	358,801	(24,346)	(6.8%)
LPG	324,020	277,992	46,028	16.6%
Natural Gasoline.....	440	-	440	100.0%
Subtotal	658,915	636,793	22,122	3.5%
<i>Exports</i>				
LPG	220,836	248,283	(27,447)	(11.0%)
Natural Gasoline.....	110,955	109,748	1,207	1.1%
Subtotal	331,791	358,031	(26,240)	(7.3%)
Total	990,706	994,824	(4,118)	(0.4%)

Since November 2007 and March 2008, a variable export tax regime has been in force for the natural gasoline and LPG exports, respectively, with a minimum effective tax rate of 31.03% when international prices are lower than US\$ 1,094 and US\$ 663 per metric ton, respectively. If international prices exceed these amounts, the marginal tax rate applicable to the excess is 100%. As a result of this export tax regime, we are unable to obtain post-tax prices of more than US\$ 754 and US\$ 457 per metric ton of natural gasoline and LPG, respectively.

Other services. This segment includes midstream and telecommunications services. Midstream services include gas treatment, separation and removal of impurities from the natural gas stream and compression services, which are generally rendered to the natural gas producers at wellhead, as well as activities related to construction, operation and maintenance of pipelines and compressor plants. These services are rendered by us or through our affiliates Link, TGU and EGS. Telecommunications services are provided by Telcosur.

In the year ended December 31, 2010, Other Services revenues decreased by Ps. 39.1 million in comparison with the year 2009. This decrease resulted from lower revenues generated by construction (partially due to fewer management construction services rendered in connection with pipeline expansion works) and midstream services (as some contracts were cancelled in 2009).

Costs of sales

Costs of sales for the year ended December 31, 2010, rose by Ps. 40.9 million, or approximately 5.0%, compared to the year ended December 31, 2009. This increase is mostly attributable to: (i) a Ps. 32.5 million rise in liquids costs; and (ii) a Ps. 9.6 million increase in labor costs.

Cost of sales for the years ended on December 31, 2010 and 2009 represented 52% and 51%, respectively, of net revenues reported in these years.

Administrative and selling expenses

Administrative and selling expenses for the year ended December 31, 2010, increased by approximately Ps. 87.5 million, or approximately 39.6%, as compared to the year ended December 31, 2009. This increase was primarily the result of a Ps. 48.3 million increase in tax on exports and Ps. 27.2 million allowance for doubtful accounts, which corresponds to the receivable balance that we had with MetroGAS S.A. as of the date this client filed for bankruptcy.

Administrative and selling expenses for the years ended on December 31, 2010 and 2009 represented 19% and 14%, respectively, of net revenues reported in these years.

Other operating expenses

The other operating expenses of Ps. 122.1 million reported in 2010 corresponded to the derecognition of the revenue recognized in 2009 relating to the 20% tariff increase mentioned above.

Other expenses, net

The details of other expenses, net for the years ended December 31, 2010 and 2009, are as follows:

	<u>2010</u>	<u>2009</u>
	(in millions of Pesos)	
Increase in allowances and provisions	(21.4)	(25.6)
Revenue from firm transportation contract termination agreement	18.6	-
Others	2.8	(1.6)
Total	-	(27.2)

Gain / (loss) on related companies

In the year ended December 31, 2010, we recorded a gain on related companies of Ps. 1.2 million, compared to the loss of Ps. 0.5 million recorded in the year ended December 31, 2009. The positive variation was due principally to higher earnings on our investments in TGU and EGS.

Net financial expense

Net financial expense for the years ended December 31, 2010 and 2009 is as follows:

	Years ended December 31,	
	<u>2010</u>	<u>2009</u>
	(In millions of pesos)	
<u>Generated by assets</u>		
Interest income	16.2	13.7
Tax credits discounted value loss	(17.0)	-
Foreign exchange gain	46.1	68.6
Total	45.3	82.3
<u>Generated by liabilities</u>		
Interest expense	(128.8)	(151.4)
Foreign exchange loss	(66.7)	(138.7)
Result of the debt prepayment.....	5.1	10.8
Other expenses and financial charges.....	(18.1)	(15.1)
Total.....	(208.5)	(294.4)
Total net financial expense.....	(163.2)	(212.1)

Net financial expense decreased by Ps. 48.9 million in the year ended December 31, 2010 compared to the year ended December 31, 2009. This decrease is primarily due to a lower depreciation of the local currency when compared to the previous year, which is, in turn, explained mostly by the Ps. 49.5 million lower foreign exchange rate loss.

In February 2005, we were served notice by the CNV that certain notes that we issued in December 2004 in the amount of US\$178 million did not fulfill the requirements of Article 56 of Chapter VI of the CNV regulations and CNV Resolution No. 470. If the CNV's interpretation is upheld, those notes would not be entitled to the benefits of the exemption from income tax withholding provided by Law No. 23,576, and we, therefore, would be exposed to a contingency for the payment of withholding amounts associated with the income tax payable on interest paid in respect of those notes from their issue date in December 2004. The amount of such contingency is an uncertain amount of between US\$8 million and US\$24 million as of December 31, 2010 (including interest to December 31, 2010) depending on the applicable withholding tax rates determined on

payment of interest, which in turn will depend on the country of residence of the note holders at the date of each interest payment. We do not have information that permits the identification of the country of residence of each note holder on each interest payment date. We believe that we have sufficient legal grounds to defend our position that no withholding tax was required, and accordingly, we have not recorded any provision in respect of this proceeding. See “Item 8. Financial Information — A. Consolidated Statements and Other Financial Information — Legal and Regulatory Proceedings.”

Year 2009 compared to year 2008

Net revenues

Regulated gas transportation segment. The gas transportation segment represented approximately 42% and 36% of total net revenues earned during the years ended December 31, 2009 and 2008, respectively.

Gas transportation revenues for the year ended December 31, 2009 increased by Ps. 163.1 million compared to the year 2008. This increase primarily reflects the accrual of a receivable in respect of the 20% natural gas transportation tariff increase which is retroactive to September 1, 2008, granted by the Argentine Government, through Presidential Decree No. 1,918/09.

Moreover, Ps. 34.1 million of the increase in gas transportation revenues for the year 2009 compared to the year 2008 were associated with new firm transportation contracts along with incremental revenues generated by the operation and maintenance of the 78 MMcf/d pipeline capacity expansion carried out under the Gas Trust, which began operating in phases between the end of 2008 and 2009.

Revenues related to interruptible transportation service amount to Ps. 25.9 million and Ps. 19.9 million for the years ended December 31, 2009 and 2008, respectively.

Liquids production and commercialization segment. Net revenues from the liquids production and commercialization segment represented approximately 50% and 57% of our total net revenues during the years ended December 31, 2009 and 2008, respectively.

Revenue from the liquids production and commercialization segment decreased by Ps. 6.8 million in the year ended December 31, 2009 compared to the year ended December 31, 2008. This slight reduction mainly stems from lower average international prices and, to a lesser extent, lower export volumes of propane and butane. These effects were mostly offset by the depreciation of the local currency, which positively impacted revenues when measured in pesos.

On September 30, 2008 the Federal Energy Bureau and LPG producers, among others, signed an agreement on the price stabilization of the LPG bottles whereby the industry players committed to a substantial reduction in the price of LPG bottles from October 1, 2008, to support low-income consumers. This price reduction is partially offset by a subsidy paid by a trust fund created for that purpose. This trust fund receives the funds provided by the rise in the wellhead natural gas price which was authorized by the Argentine government. In 2009, this agreement resulted in a reduction in our revenues of approximately Ps. 17 million.

In November 2008, the Argentine government created a tariff charge to be paid by the industries and high consumption households, with the aim of recovering the difference between the natural gas price in imports and the local market price, which was subsidized by the government in the past. The fixed tariff charge amounts to Ps. 0.049 per cubic meter of natural gas consumed. This charge represents to us an additional annual cost of approximately Ps. 43 million, based on volumes consumed in 2009.

In 2009, we sold approximately 53% of our production of LPG in the local market to LPG marketers (52% in 2008).

The total annual sales for the Cerri Complex for 2009 and 2008 in short tons, which include liquids sales made on behalf of third parties, from which we withhold fees for production and commercialization, were as follows:

	Years ended December 31,		Year ended December 31, 2009 compared to year ended December 31, 2008	
	(volumes in short tons)		Increase / (decrease)	Percentage change
	2009	2008		
<i>Local market</i>				
Ethane.....	358,801	326,281	32,520	10.0%
LPG	277,992	278,187	(195)	(0.1%)
Natural Gasoline.....	-	434	(434)	(100.0%)
Subtotal	636,793	604,902	31,891	5.3%
<i>Exports</i>				
LPG	248,283	272,138	(23,855)	(8.8%)
Natural Gasoline.....	109,748	118,832	(9,084)	(7.6%)
Subtotal	358,031	390,970	(32,939)	(8.4%)
Total	994,824	995,872	(1,048)	(0.1%)

Liquids production in 2009 was quite similar to the levels reached in 2008. The positive factors that promoted production were the availability of the regasified natural gas that was injected in Bahía Blanca, as well as moderate temperatures and access to hydraulic energy, which favored the availability of natural gas for greater processing volume. Production was negatively affected by the international economic crisis, which had an adverse impact on the sale of ethane in the first quarter of the year, the programmed plant stoppage for major maintenance works, and social conflicts that resulted in natural gas supply cuts from the gas fields located in Santa Cruz and obstacles to normal operations in the dispatch of products.

Other services. Net revenues from the other services segment accounted for approximately 8% and 7% of total net revenues for the years ended December 31, 2009 and 2008, respectively. Of net revenues from the other services segment, 20% and 23% corresponded to telecommunications services for the years ended December 31, 2009 and 2008, respectively. Revenues from Other services showed an increase of Ps. 25.1 million compared to 2008. This increase was explained mainly by the Ps. 7.6 million sale of a treatment plant located in the province of Salta and the works for Repsol-YPF to improve the operation of the natural gas injection from the regasification tanker, generating revenues of Ps. 6.8 million.

Costs of sales

Costs of sales for the year ended December 31, 2009, rose by Ps. 58.5 million, or approximately 7.7%, compared to the year ended December 31, 2008. This increase is mostly attributable to: (i) a Ps. 24.6 million rise in liquids costs; and (ii) a Ps. 17.5 million increase in labor costs.

Cost of sales for the years ended on December 31, 2009 and 2008 represented 51% and 53%, respectively, of net revenues reported in these years.

Administrative and selling expenses

Administrative and selling expenses for the year ended December 31, 2009, decreased by approximately Ps. 7.2 million, or approximately 3.2%, as compared to the year ended December 31, 2008. This decrease was primarily the result of a Ps. 33.7 million reduction in tax on exports, partially offset by a Ps. 20.9 million increase in labor costs.

Administrative and selling expenses for the years ended on December 31, 2009 and 2008 represented 14% and 16%, respectively of net revenues reported in these years.

Other expenses, net

The details of other expenses, net for the years ended December 31, 2009 and 2008, are as follows:

	<u>2009</u>	<u>2008</u>
	(in millions of Pesos)	
Increase in allowances and provisions	(25.6)	(17.6)
Reversal of allowances and provisions.....	-	0.1
Others	(1.6)	1.9
Total	<u>(27.2)</u>	<u>(15.6)</u>

(Loss) / Gain on related companies

In the year ended December 31, 2009, we recorded a loss on related companies of Ps. 0.5 million, compared to the gain of Ps. 1.2 million recorded in the year ended December 31, 2008. The negative variation was due principally to lower earnings on our investment in Link.

Net financial expense

Net financial expense for the years ended December 31, 2009 and 2008 is as follows:

	<u>Years ended December 31,</u>	
	<u>2009</u>	<u>2008</u>
	(In millions of pesos)	
<u>Generated by assets</u>		
Interest income	13.7	16.9
Foreign exchange gain	68.6	60.6
Total	<u>82.3</u>	<u>77.5</u>
<u>Generated by liabilities</u>		
Interest expense.....	(151.4)	(141.0)
Foreign exchange loss.....	(138.7)	(130.1)
Result of the debt prepayment.....	10.8	114.0
Other expenses and financial charges.....	(15.1)	(18.9)
Total.....	<u>(294.4)</u>	<u>(176.0)</u>
Total net financial expense.....	<u>(212.1)</u>	<u>(98.5)</u>

Net financial expense increased by Ps. 113.6 million in the year ended December 31, 2009 compared to the year ended December 31, 2008. This variation is mostly explained by a Ps. 114.0 million gain in 2008, which was generated by the purchase, under par, of our debt notes in the financial market amounting to a nominal value of US\$ 95 million and their cancellation. In 2009, we also bought debt notes, of about nominal value of US\$ 10 million, generating a smaller gain, of Ps. 10.8 million.

B. Liquidity and capital resources

Beginning in April 2007, we began a series of steps to refinance our outstanding obligations under the notes issued in connection with the restructuring of our debt in December 2004 (the “**Restructured Notes**”) and the amended and restated loan agreements with Inter-American Development Bank (the “**Amended Loans**”). These steps included a tender offer and proxy solicitation with respect to all of the Restructured Notes (the “**Tender Offer**”), a new notes offering and an optional prepayment of amounts outstanding under the Amended Loans and redemption of the Restructured Notes remaining after the completion of the tender offer. On April 9, 2007, we launched the Tender Offer, and received a sufficient number of proxies by the early tender deadline to amend the terms of the Restructured Notes as necessary to allow the consummation of the Tender Offer, which was otherwise not permitted under the terms of the Restructured Notes. The Tender Offer expired on May 7, 2007 and was accepted by 78.4% of noteholders.

Concurrent with the Tender Offer, we commenced an offering of new notes in an aggregate principal amount of US\$500,000,000 (the “**New Notes**”) pursuant to our Medium Term Note Program (the “**Program**”), which provides for the issuance of up to a maximum principal amount of US\$650 million in notes. On May 14, 2007, we simultaneously closed the offering of New Notes and used a portion of the proceeds and cash to settle the Tender Offer. The interest rate for the New Notes is fixed at 7.875%, and the maturity date is May 14, 2017. The principal amount will be amortized in four equal payments, which will mature on May 14, 2014, 2015, 2016 and 2017. As of May 14, 2007, our total U.S. dollar-denominated principal debt for accounting purposes consisted of US\$500,000,000 in New Notes and US\$97,318,912 in Restructured Notes not tendered in the Tender Offer and US\$206,823,727 under the Amended Loans. On June 15, 2007, using the remainder of the proceeds from the New Notes and cash, we made an optional prepayment of all amounts owing under the Amended Loans and redeemed the outstanding Restructured Notes. As a result, the aggregate principal amount of our total U.S. dollar-denominated debt as of June 15, 2007, immediately after completing such prepayment, was US\$500,000,000.

With the aim of reducing our financial indebtedness and considering the favorable market conditions, during 2010, 2009 and 2008, we proceeded to cancel notes with a nominal value of US\$21,326,000, US\$9,650,000 and US\$95,000,000, respectively, which were bought on the market at prices below their nominal value. As of the date of this Annual Report, our financial indebtedness amounted to US\$374,024,000 and thus, the amortization payments are expected to amount to US\$93,506,000 each. The decreased level of indebtedness combined with the absence of principal payment commitments and a more reasonable financing cost for the next three years will help us weather the impact of the international economic and credit crisis. We believe that our working capital is sufficient for our present requirements.

In the last quarter of 2008, liquids international prices fell abruptly, then recovered partially in 2009, which has caused an important reduction in cash generation principally in the final quarter of 2008 and the first quarter of 2009. In 2010, as a result of the international prices recovery mentioned above, and the increase in the prices obtained after the closing of new LPG and natural gasoline agreements, we were able to compensate for the increases in our operational costs and the decrease in the revenues from gas transportation and other business segments. A potential future devaluation of the peso, additional capital expenditures required by the Argentine government or lower liquids prices could harm our cash-generating ability and materially adversely affect our liquidity and our ability to service our debt.

The statements of cash flows presented in the Financial Statements are prepared based on Argentine GAAP amounts. Under Argentine GAAP, we consider all short-term, highly liquid investments that are readily convertible to known amounts of cash and with original maturities of three months or less to be cash equivalents. Under Argentine GAAP, mutual funds are considered to be cash equivalents since original maturity is determined by reference to the frequency with which liquidity is available according to current Argentine GAAP guidance and practice. However, under FASB ASC 230, Statement of Cash Flow, the original maturity is determined by reference to the stated term of the security or the timeframe for exercising any put features to the issuer, not by reference to the frequency with which liquidity may be available through an auction, a put feature to a third party, or otherwise. As a result, differences exist between the total amount of the increase or decrease in cash and cash equivalents reported in the primary Financial Statements and the same totals that would be reported in a statement of cash flows prepared based on US GAAP amounts. In addition, differences exist between cash flows from operating, investing and financing activities reported in the primary Financial Statements and the cash flows from operating, investing and financing activities that would be reported under FASB ASC 230. For a description of the total amounts of cash and cash equivalents and other differences under US GAAP see Note 12 to our Financial Statements.

Our primary sources and uses of cash during the years ended December 31, 2010, 2009 and 2008 are shown in the table below:

	For the year ended December 31,		
	2010	2009	2008
	(in millions of pesos)		
Cash and cash equivalents at the beginning of the year	1,025.2	604.7	391.3
Cash flows provided by operating activities	320.5	511.6	582.1
Cash flows used in investing activities.....	(142.8)	(149.1)	(192.4)
Cash flows (used in) / provided by financing activities	(113.3)	58.0	(176.3)
Net increase in cash and cash equivalents	64.3	420.5	213.4
Cash and cash equivalents at the end of the year	1,089.5	1,025.2	604.7

Cash flows provided by operating activities

Cash flows from operating activities for the year ended December 31, 2010 decreased by 37% in comparison with 2009. This decrease was mainly due to higher income tax paid in 2010 for Ps. 166.4 million (in 2009, we offset our income tax liability through application of a Ps. 117.3 million tax receivable).

Cash flows from operating activities for the year ended December 31, 2009 decreased by 12% in comparison with 2008, which was enough to cover the investing and financing activities, described below, allowing us to increase our cash position by more than 50%. This decrease was mainly due to lower cash generated by revenues and higher cost incurred. Although cash flows from operating activities decreased from 2008 to 2009, net revenues during the same period increased; this difference results, in part, from the accrual of a receivable in respect of the increase in our natural gas transportation tariff that has been agreed with UNIREN (for further information, see “Item 4. Our Information—B. Business Overview—Gas Transportation—Regulatory framework—Adjustment of rates”).

Cash flows used in investing activities

Cash flows used in investing activities in 2010 decreased by 4% or Ps. 6.3 million, in comparison with 2009 due to lower capital expenditures made in 2010.

Cash flows used in investing activities in 2009 were lower compared to 2008, because in 2008 we made a Ps. 111 million investment to expand the gas transportation system, which was requested and financed by Aluar through the advance payment of the service. For additional information see “Item 4. Our Information – A. Our history and development - General”.

Cash flows (used in) / provided by financing activities

Cash flows used to finance activities in 2010 were Ps. 113.3 million, which compares with a net cash inflow of Ps. 58.0 million generated in 2009, originated by the funds borrowed from a customer. In 2009, the Aluar advance payment of Ps. 113.5 million was a source of cash. On the other hand, in 2010 we purchased notes with a nominal value of Ps. 83.0 million, whereas in 2009 the purchases amounted Ps. 25.5 million.

In 2009, cash flows from financing activities were Ps. 58.0 million, compared to Ps. 176.3 million in 2008. The difference is mainly due to advances collected from Aluar of Ps. 113.5 million to finance the investment mentioned above. By contrast, in 2008, the net cash flows from the financing activities was negative, which is explained by the substantial reduction of our financial indebtedness through repurchase of our New Notes that we carried out in this year.

The Ordinary Shareholders’ Meeting held on April 29, 2011 approved the dividend payment of Ps. 976 million. Dividends were able to be paid on May 27, 2011.

Description of indebtedness

As described above, in June 2007 we issued new notes pursuant to our Program. We are subject to several restrictive covenants under the New Notes that limit our ability to obtain additional financing, including limitations on our ability to incur additional indebtedness to create liens on our property, assets or revenues. Since our New Notes amortize beginning on May 14, 2014 we will have annual obligations to repay principal on such debt. We are also subject to other restrictive covenants that impact our use of cash on hand, such as limitations on our ability to pay dividends to our shareholders, and limitations on our ability to sell our assets. See “Item 10. Additional Information—C. Material Contracts—New Debt Obligations” for a detailed discussion of the terms of our New Notes, including the interest rates and material covenants applicable to such indebtedness.

Future Capital Requirements

Details of our currently projected capital expenditures for the 2011-2013 period, in millions of U.S. dollars, are set forth in the following table:

	<u>2011</u>	<u>2012</u>	<u>2013</u>	<u>Total</u>
<i>Gas transportation</i>				
Reliability and others	27.4	38.3	34.1	99.8
Expansions	-	-	-	-
Operational efficiencies.....	0.8	-	-	0.8
Total.....	28.2	38.3	34.1	100.6
<i>Liquids production and commercialization</i>				
Expansions	-	-	-	-
Operational efficiencies	1.2	0.1	-	1.3
Reliability and others	9.1	13.6	11.0	33.7
Total.....	10.3	13.7	11.0	35.0
<i>Other services.....</i>	1.4	1.5	1.6	4.5
Total Capital Expenditures	39.9	53.5	46.7	140.1

We currently expect that our capital investment requirements will be financed primarily by cash from operations.

Currency and exchange rates

Our primary market risk exposure is associated with changes in the foreign currency exchange rates because all of our debt obligations are denominated in U.S. dollars and more than Ps. 500 million of our annual revenues are peso-denominated. Contributing to this exposure are the measures taken by the Argentine government since the repeal of the Convertibility Law and the pesification of our regulated tariffs. This situation is mitigated in part by our liquids production and commercialization segment, more than 90% of the revenues from which are denominated in U.S. dollars.

We place our cash and current investments in high quality financial institutions in Argentina, the United States of America and Europe. Our policy is to limit exposure with any one institution. Our temporary investments primarily consist of money market mutual funds and fixed-term deposits.

Our financial debt obligations denominated in foreign currency as of December 31, 2010, amounted to US\$377.7 million (Ps. 1,501.8 million). As of December 31, 2010, we also had the equivalent of US\$12.4 million (Ps. 49.2 million) of trade and other payables denominated in U.S. dollars. Finally, US\$274.6 million (Ps. 1,081.0 million) of our assets are denominated in U.S. dollars. Therefore, our net liability position in U.S. dollars amounted to US\$115.5 million as of December 31, 2010.

We estimate, based on composition of our balance sheet as of December 31, 2010, that every Argentine peso exchange rate variation of 10% against the U.S. dollar, plus or minus, would result in a variation of Ps. 45.9 million of our consolidated net position in U.S. dollars. This sensitivity analysis provides only a limited view of the market risk sensitivity of certain of our financial instruments. The actual impact of market foreign exchange

rate changes on our financial instruments may differ significantly from the impact shown in the sensitivity analysis.

Derivative financial instruments

Our Board of Directors has approved the terms for acquiring derivative financial instruments in order to hedge risks associated with the fluctuation of interest and exchange rates of our debt.

In November 2007, the Company entered into a currency forward agreement with a major financial institution, which expired on May 12, 2008. By means of this hedge agreement, the Company fixed an exchange rate of Ps. 3.227 per U.S. Dollar on the purchase of US\$ 9 million in order to provide for the interest payment on the New Notes due on May 14, 2008. As of December 31, 2007, the fair value of this currency forward agreement was approximately (Ps. 90) and was recorded in “Current Loans” with credit to “Other Comprehensive Loss” account. As of December 31, 2010, we did not have any outstanding derivative financial instruments.

We do not believe that we are exposed to significant interest rate risk because the interest rates on our debt obligations do not change with the market.

C. Research and development, patents and licenses, etc.

Not applicable.

D. Trend information

See “A. Operating Results—Discussion of Results of Operations for the Three Years ended December 31, 2010, 2009 and 2008” and “Item 8. Financial Information—A. Consolidated Statements and Other Financial Information—Legal and regulatory Proceedings.”

E. Off-balance sheet arrangements

We currently do not have any off-balance sheet arrangements or significant transactions with unconsolidated entities not reflected in our consolidated Financial Statements. All of our interests in and/or relationships with our subsidiaries are recorded in our consolidated Financial Statements. See “B. Liquidity and Capital Resources—Derivative Financial Instruments”.

F. Tabular disclosure of contractual obligations

The following table represents a summary of our contractual obligations as of December 31, 2010:

	Payment due by period (in millions of pesos)				
	Total	Less than 1 year	1-3 years	3-5 years	More than 5 years
Long-Term Debt Obligations	1,501.9	14.7	372.0	372.0	743.2
Purchase Obligations ⁽¹⁾	316.8	116.8	200.0	-	-
Total	1,818.7	131.5	572.0	372.0	743.2

(1) Corresponds to contracts for the purchase of natural gas used in our liquids production and commercialization activities.

All of the debt obligation amounts set forth above are U.S. dollar-denominated and, therefore, principal and accrued interest included in the amounts presented have been converted to peso amounts using the selling exchange rate of US\$1=Ps. 3.976 as of December 31, 2010. Actual foreign currency debt payments may significantly differ from these estimates due to exchange rate fluctuations.

Item 6. Directors, Senior Management and Employees

A. Directors and Senior Management

General. Management of our business is vested in the Board of Directors. Our By-laws provide for a Board of Directors consisting of nine Directors and nine Alternate Directors. In the absence of one or more Directors, Alternate Directors will attend meetings of the Board of Directors. Directors and Alternate Directors are elected at an ordinary meeting of shareholders and serve one- to three-year renewable terms, as decided by the shareholders.

Under our By-laws and Argentine law, the Board of Directors is required to meet at least once every three months. A majority of the members of the Board constitutes a quorum, and resolutions must be adopted by a majority of the Directors present. In the case of a tie, the Chairman or the person replacing him at a particular meeting is entitled to cast the deciding vote.

At the Annual Shareholders' Meeting held on April 2, 2004, the number of Directors on our Board was increased by two members to nine from seven. Additionally, the shareholders decided at that meeting that upon motion by the Chairman, our Board of Directors' meetings may now be held by video or telephone conference.

The current Board of Directors was elected by our shareholders at the Annual Ordinary Shareholders' Meeting held on April 29, 2011, for a three-year term.

The Shareholders' Agreement contains provisions governing the voting of our shares held by CIESA, the election of the members of our Board of Directors and certain other matters. For more information see "Item 7. Major Shareholders and Related Party Transactions—A. Major Shareholders—Shareholders' Agreement."

As we mentioned above, in December 2008, as a consequence of the enactment of Law No. 26,425, the AFJPs transferred their outstanding share capital of TGS (which represents more than 20% of our common stock) to the ANSES. Before Presidential decree No. 441/2011 was enacted, the ANSES had limitations to its voting rights in shareholders' meetings to 5% of the relevant company's votes. In April 2011, said decree eliminated that restriction, and therefore, in our Annual Ordinary Shareholders' Meeting held on April 29, 2011, the ANSES appointed Miguel Eduardo Mirmi and María Belén Franchini as independent directors and Ernesto Guillermo Leguizamón and Santiago Alejandro Maggiotti as independent alternate directors.

Duties and Liabilities of Directors. Under Argentine law, Directors have the obligation to perform their duties with the loyalty and diligence of a prudent business person. Directors are jointly and severally liable to us, shareholders and third parties for the improper performance of their duties, for violating the law, our By-laws or regulations, if any, and for any damage caused by fraud, abuse of authority or gross negligence. Under Argentine law, specific duties may be assigned to a Director by our By-laws or regulations or by a resolution of a Shareholders' Meeting. In such cases, a Director's liability will be determined with reference to the performance of such duties, provided that certain recording requirements are met. Moreover, under Argentine law, Directors are prohibited from engaging in activities in competition with us without express shareholder authorization. Certain transactions between us and Directors are subject to ratification procedures established by Argentine law.

A Director will not be liable if, notwithstanding his presence at the meeting at which a resolution was adopted or his knowledge of such resolution, a written record exists of his opposition thereto and he reports his opposition to the Supervisory Committee before any complaint against him or her is brought before the Board, the Supervisory Committee, a Shareholders' Meeting, competent governmental agency or the courts. Shareholder approval of a Director's performance terminates any liability of a Director vis-à-vis us, provided that shareholders representing at least 5% of our capital stock do not object and that such liability does not result from a violation of the law or our By-laws or regulations.

Causes of action against Directors may be initiated by us upon a majority vote of shareholders. If a cause of action has not been initiated within three months of a shareholders' resolution approving its initiation, any shareholder may initiate the action on behalf of and for our account.

At the Annual Shareholders' Meeting held on March 6, 1996, our shareholders approved the acquisition of civil liability insurance coverage for directors, members of our Supervisory Committee ("**Syndics**") and officers. Such coverage is common practice among public companies who seek protection against shareholders' and other parties' claims.

Four of the members of our Board of Directors qualify as independent as defined in Section 301 of the Sarbanes Oxley Act and Resolution No. 368 of the CNV. Three of them are also members of our Audit Committee. The remainder of the members of the Board of Directors are not independent. Under the independence requirements a director is not independent if any of the following apply:

- is also member of the administrative body or dependent on shareholders who hold “significant shareholding” of the issuer, or any corporation in which those shareholders hold directly or indirectly “significant shareholding”,
- is engaged or was engaged during the last three (3) years to the issuer under a contract of employment,
- provides, or belongs to a professional corporation or association which renders professional services to, or receives any form of remuneration or fees (other than the corresponding remuneration for its position in the administration body) from the issuer or those shareholders that have any direct or indirect “significant shareholding” in the Company or from corporations in which shareholders also have any direct or indirect “significant shareholding”,
- directly or indirectly holds “significant shareholding” in the issuer or any corporation which holds “significant shareholding” in the latter,
- directly or indirectly sells or provides goods or services to the issuer or its shareholders, who hold direct or indirect “significant shareholding”, for an amount substantially higher than the compensation received for their position as members of the administration body,
- is a husband or wife, close relative up to fourth degree of kinship or second degree of relationship that, in case of being member of the administration body, would not be independent as set forth in the CNV regulations.

In all cases “significant shareholding” refers to those shareholders holding at least thirty-five per cent (35%) of the Company’s common stock, or less in cases when they are entitled to appoint one or more directors per class of share, or have agreements with other shareholders relating to management and administration of any such companies, or its controlling entity.

The following table sets out the membership of our Board of Directors as approved in our Annual Shareholders’ Meeting held on April 29, 2011, their respective positions on the Board and the year they were appointed to such position.

Name	Year of Appointment	Term Expires	Position	Position in other Company
Ricardo Isidro Monge	2010	2014	Chairman	Adviser to the Executive Director at Petrobras Argentina
Gustavo Mariani	2011	2014	Director	Partner and managing director of Grupo Dolphin S.A.
Rigoberto Mejía Aravena	2006	2014	Director	Manager of the Division of Integration and Participations at Petrobras Argentina.
Héctor Daniel Casal	2009	2014	Director	Legal Vice president at Petrobras Argentina
Sonia Fabiana Salvatierra	2009	2014	Director	Member of the law firm Salvatierra & Asociados Abogados
María Belén Franchini	2011	2014	Independent Director	Legal and Technical Secretary of the ANSES
Diego Alberto Güerri	2006	2014	Independent Director	Member of the law firm Güerri
Carlos Alberto Olivieri	2010	2014	Independent Director	Independent consultant
Miguel Eduardo Mirmi	2009	2014	Independent Director	Member of the law firm Daglio, Miralles & Mirmi
Jorge Raúl Subijana	2010	2014	Alternate Director	Finance Manager
Marcos Marcelo Mindlin	2011	2014	Alternate Director	Chairman at Pampa
Allan Blumenthal	2011	2014	Alternate Director	Natural Gas Business at Petrobras Argentina
Diego Saralegui	2011	2014	Alternate Director	Government Relations Manager at Petrobras Argentina
Mariano Osvaldo Ferrero	2011	2014	Alternate Director	Legal Consultant
Santiago Alejandro Maggiotti	2011	2014	Independent Alternate Director	Credit Risk Manager of the FGS at ANSES

Diego Petrecolla	2007	2014	Independent Alternate Director	Chairman of GPR Economía S.A.
Ernesto Guillermo Leguizamón	2009	2014	Independent Alternate Director	Member of the law firm Leguizamón, Alonso & Asoc.

Additional information regarding the occupation and employment background of each of our regular Directors is set forth below:

Ricardo I. Monge has served as advisor to the Executive Director of Petrobras Argentina since 2008. He graduated with a degree in Industrial Engineering from the *Universidad de Buenos Aires* and obtained a Postgraduate degree in Management Development Program. Since March 2002 he has held different managerial positions at Petrobras Argentina. Previously he worked as Business Manager for Eg3 S.A. and Isaura S.A. He is currently a member of the Board of Directors of MEGA, CIESA and Petrobras Hispano. He was born on May 16, 1951.

Gustavo Mariani has a Master in Finance from the CEMA University, a degree in Economics from the University of Belgrano, and is a Chartered Financial Analyst (CFA) since 1998. He is a partner and managing director of Grupo Dolphin S.A. In 2005, he became Director in Pampa Energía where he serves as Chief Business Development Manager. He also serves as Director in the Boards of Edenor S.A., Transba S.A., CIESA, Central Termica Güemes S.A., Central Termica Loma La Lata, Central Termica Piedra Buena and he is Chairman of Hidroeléctrica Los Nihules and Hidroeléctrica Diamante. Prior to 2005 Mr. Mariani served as CFO of Grupo IRSA/Cresud/Alto Palermo. He was born on September 9, 1970.

Rigoberto Mejía Aravena has a Master's Degree in Engineering Sciences with mention in Industrial Engineering and also an Electrical Civil Engineering degree, both obtained at the University of Chile. He also obtained a Master's Degree in Business Administration from the Instituto de Altos Estudios Empresariales of the Universidad Austral. Before joining Petrobras Argentina in 1996, he worked for Central Puerto S.A. and Gener Argentina S.A. He currently works as Manager of Participations at Petrobras Argentina. He is also a member of the boards of directors of the following companies: Distrilec Inversora S.A., Edesur S.A., MEGA, CIESA, Telcosur, EGS, TGU, Enecor S.A., Petrobras Electricidad de Argentina S.A., Uruguay-í S.A., Termoeléctrica Manuel Belgrano S.A, Termoeléctrica José de San Martín S.A. and Petrobras Finance Bermuda Ltd.. He was born on November 7, 1963.

Héctor Daniel Casal graduated in Law from the *Universidad Católica Argentina* in 1980. He joined Petrobras Argentina in 1991. Since 2003 he has acted as legal vice president at Petrobras Argentina. Currently, he serves as Director of CIESA, Distrilec Inversora S.A. and Petrobras Electricidad de Argentina and as alternate Director of Petrobras Argentina, Edesur S.A. and Petrolera Entre Lomas. He also serves as Director abroad in Petrobras Argentina Colombia, Petrobras Holding Austria GmbH and Petrobras Financial Services Austria GmbH. He was born on April 10, 1956.

Sonia Fabiana Salvatierra received a degree in Law from the *Universidad de Buenos Aires*. Between 1987 and 1996 she worked for the Caja de Valores S.A.. Between 1996 and 2008 she acted as associate for Marval O'Farrell & Mairal. Currently, she is partner in Salvatierra & Asociados law firm. She is also a member of the Board of Directors of CIESA. She was born on March 20, 1966.

María Belén Franchini received a Law degree from the *Universidad de Buenos Aires* and a Postgraduate Diploma from the *Universidad Autónoma de Barcelona* (Spain) in 2002. At present, she acts as Legal and Technical Secretary of the ANSES. Between 2002 and 2008, she acted as Legal and Technical Advisor and subsequently as Chief of Administrative Department of the Senate Constitutional Affairs Commission and as Legal and Technical Advisor to the National Senator during that period, Cristina Fernández de Kirchner. Between February 2008 and June 2009 she acted as Cabinet Advisor of the *Sindicatura General de la Nación* and was appointed General Syndic of that entity from July 2009 to January 2011. She was born on December 30, 1975.

Diego Alberto Güerri received a Law degree from the *Universidad de Buenos Aires*. He also obtained a Master's Degree in Business Administration from IAE Business School, *Universidad Austral*. Between October 2002 and 2005 he acted as liquidator. of Quilseg S.A, Quilburs S.A., Capi S.A., Cirqui S.A., Dispel S.A. and Faique S.A. He was partner of Zarantonello & Güerri law firm between 1999 and 2007. Since 2007 he has been partner of the law firm Güerri. He is also a member of the Board of Directors of CIESA. He was born on January 8, 1969.

Carlos Olivieri holds a Public Accountant degree from the *Universidad Nacional de Rosario* and a postgraduate degree in Corporate Financial Management from the University of Michigan (USA). At present, Mr. Olivieri is dean at Austral University and professor of Finance of Di Tella and CEMA University. Between 2008 and March 2010, Mr. Olivieri acted as a financial advisor at Raymond James and between 2002 and 2007

he worked for Repsol YPF S.A. as CFO for Argentina, Brazil and Bolivia. Previously he acted as CFO of YPF S.A., Quilmes Industrial S.A. and Eaton S.A. and president of YPF GAS S.A. and Maxus Corporation (USA). He also had executive responsibilities in other industries such as Aerolíneas Argentinas and Arthur Andersen & Co. and taught at the *Universidad de Buenos Aires*, *Universidad del Salvador* and Valencia and Murcia universities. Currently, Mr. Olivieri is also member of the Board of Directors of Petrolera El Trébol S.A. and Center Financial Stability. He was born on May 14, 1950.

Miguel Eduardo Mirmi received a degree in Law from the *Universidad Nacional de La Plata*. He was partner in several law firms, including Frávega law firm (1978-1988) and Lex law firm (1989 – 2004); and since 2005 he has been a partner in Daglio, Miralles & Mirmi Abogados law firm. He has been advisor to several advisory commissions of the Low Chambers and other governmental organizations. He was born on April 23, 1956.

Executive Officers. The following is a list of our executive officers as of the date of this Annual Report, their respective positions with us and the year they were appointed to such position:

Name	Year of Appointment	Position
Carlos Seijo	2009	CEO
Gonzalo Castro Olivera	2007	CFO
Benjamín Guzmán	2010	Operations Vice President
Daniel Perrone	1999	Institutional Affairs Vice President
Nicolás Mordeglia	2010	Legal and Regulatory Affairs Vice President
Juan Martín Encina	2004	Human Resources Vice President
Alejandro Basso	1998	Management Control and Corporate Regulations Vice President
Oscar Sardi	2005	Service Vice President
Javier Sato	2010	Business Vice President

There is no expiration term defined for the Executive Officers.

Below is a description of the main activities currently carried out by each of our executive officers, together with the biographical information thereof:

Carlos Alberto Seijo received a Chemical Engineering degree from the *Universidad de Buenos Aires*. He has worked for Shell Capsa, Interpetrol and Central Puerto S.A. He joined Petrobras Argentina in 1999 as New Business Planning Manager for the Gas and Energy Division. From January 2006 until March 2009 he held the position of Gas Natural Marketing Manager in Petrobras Argentina. Since February 2009, he has served as our CEO. He is chairman of the Board of Directors of Telcosur, TGU and EGS. He was born on November 26, 1957.

Gonzalo Castro Olivera received a degree in Business Administration from the *Universidad de Belgrano* and a Master's Degree in Finance from the *Universidad Torcuato Di Tella*. Between 1997 and 1998, he worked for the ABN AMRO Bank N.V. and, between 1991 and 1997, he worked at BankBoston. In both banks he worked in corporate banking. He joined us as Head of Capital Markets in 1998, and from 2005 to 2007, he was our Finance and Corporate Information Manager. He became our CFO in 2007. He was born on October 23, 1968.

Benjamín Guzmán received an Electromechanical Engineering degree and a Bachelor in Chemistry Degree from the *Universidad de Buenos Aires*. He obtained a Master in Business Administration from *IDEA* and a Master in Regulations of Gas and Electricity Industries from *CEARE*. He was born in September 25, 1956.

Daniel Perrone received a Mechanical Engineering degree from the *Universidad Tecnológica Nacional*. He has previously worked for Cometarsa S.A., Matoil S.A., Servoil S.A., Bidas S.A.P.I.C. and TransCanada International. From 1999 through March 2010, he served as our Regulatory Matters and Rates Vice President and, since August 2001, has also been responsible for Institutional Affairs. He was born on August 29, 1948.

Nicolás M. Mordeglia received a Law degree from the *Universidad de Buenos Aires* and a Master's degree in Business Law from *Universidad Austral*. He worked for Sade S.A.C.C.I.F.I.M. from 1990 to 1992, for SADE Ingeniería y Construcciones S.A. in 1993 and for Compañía Naviera Perez Companc S.A.C.F.I.M.F.A from 1994 to 1995. Cerro Vanguardia S.A. from 1995 to 1999. From 1999 to 2010, he worked for the Legal Affairs Department of Petrobras Argentina and has been appointed to several Board of Directors and Supervisory Committees in corporations in Argentina and abroad where Petrobras Argentina has interest. Since August 2010,

he has served as our Legal Affairs Vice President and since April 2011 he has been responsible for regulatory matters. He was born on August 17, 1965.

Juan Martín Encina received a Law degree from the *Universidad de Buenos Aires* and obtained a Master's Degree in Human Resources from the *Universidad de Ciencias Empresariales y Sociales*. Since 2004 he has served as our Human Resources Vice President. From 2000 to 2004, he served as Human Resources Department Vice President of Petrobras Argentina for the Gas and Energy business and Centralized Functions. Prior to that, he headed Human Resources actions for different projects in Ecuador and Brazil, and in Argentina he has been responsible for Labor Relations Areas at utilities of the electric and railway sectors. He was born on March 2, 1967.

Alejandro Basso received a Public Accounting degree from the *Universidad de Buenos Aires*. He worked for Petrobras Argentina from 1987 to 1992 and for Quitral-Co S.A. from 1992 to 1994. From 1994 to 1998, he acted as our Planning and Corporate Control Manager and between September 1998 and March 2008 he was our Planning and Control Vice President. Since March 2008, he has been our Management Control and Corporate Regulations Vice President. He also acts as Vice Chairman of TGU and as a member of the Board of Directors of EGS and Telcosur. He was born on October 13, 1961.

Oscar Sardi received a Mechanical Engineering degree from the Universidad Nacional de Rosario and holds a major in Natural Gas from *Universidad de Buenos Aires*. He also participated in a General Administration Program at the *Universidad Austral*. He worked for Gas del Estado between 1983 and 1992 and during that year he held different positions in our operations area. In April 2005 he was designated Service Vice President. He also acts as alternate director of Link and Telcosur. He was born on September 1, 1955.

Javier Sato received a Chemical Engineering degree from the *Universidad de Buenos Aires*. Before joining us, he worked for Petrobras Argentina in several positions. Between October 2005 and March 2008 he acted as CEO of Conecta (a gas distribution company in Uruguay). Until March 2005 he served as Planning and Business Development Manager of the refining, petrochemical and fertilizing business unit of Petrobras Argentina and between April 2005 and September 2005 he worked for Petrobras in Brazil. In April 2008, he joined us and worked as Planning and Business Development Vice President until June 2010, when he was appointed as Business Vice President. He also acts as a member of the Board of Directors of Telcosur. He was born on June 28, 1956.

Indemnification of Officers and Directors. Under the Shareholders' Agreement, the shareholders of CIESA require us to: (i) limit the liability of each of our officers, syndics and directors for all consequences of their acts or omissions, excluding acts or omissions where there is evidence of fraud or gross negligence and (ii) enter into agreements obligating us to defend, indemnify and hold harmless each of our officers, syndics and directors from and against all liabilities, losses, and other expenses incurred by each such officer, syndics or director in connection with a pending, threatened or completed civil, criminal, administrative or other proceeding, or any investigation that could lead to such a proceeding, by reason of the fact that such officer, syndics or director is or was one of our officers, syndics or directors, including claims alleged to be due to the negligence of such person, but excluding acts or omissions that involve fraud or gross negligence towards us.

B. Compensation

The remuneration paid by us during the year 2010 in favor of our members of the Board of Directors and executive officers amounted to Ps. 1.2 million and Ps. 8.6 million, respectively.

We do not grant pension or retirement plans or other benefits to members of our Board of Directors or to our executive officers.

Executive officers are subject to a goal-directed management system with a variable remuneration program. Consensual objectives are in line with our global objectives, as the variable remuneration program links a portion of its compensation to the performance thereof and our performance.

C. Board Practices

For information on the term of office of our directors and executive officers, see "A. Directors and Senior Management" above. The information in that section is incorporated herein by reference.

None of the members of our Board of Directors are party to any service contract with us or any of our subsidiaries providing for benefits upon termination of employment.

Audit Committee

According to the “Public Offering Transparency Regime” regulated under Decree No. 677/01, as supplemented by Resolutions No. 400 and 402 issued by the CNV, publicly listed companies must have an Audit Committee “that will function on a collegiate basis with three or more members of the Board of Directors, the majority of whom must be independent under CNV regulations.” On May 26, 2003, our Board of Directors approved the form of Rules of Procedure of the Audit Committee in order to comply with these provisions.

Also in compliance with the above resolutions, at the Ordinary and Extraordinary Shareholders’ Meeting of April 2, 2004 the shareholders approved the amendment of the By-laws in order to incorporate a section relating to the structure and operation of the Audit Committee.

The Audit Committee operates under its Rules of Procedure, which require that the three members that form it must be independent according to the standards of the SEC and the CNV. Committee members are designated by a simple majority of the Board of Directors, at the first meeting following designation of the members of the Board of Directors, and they hold office until their successors are designated. The Audit Committee adopts its own regulations and must prepare a working plan for each fiscal year. At the Shareholders’ Meeting held on April 29, 2011, Diego Alberto Güerri, Carlos Alberto Olivieri and Miguel Eduardo Mirmi were designated as independent members of the Board of Directors and were appointed to the Audit Committee for a one-year term, and Alejandro Candiotti, Diego Petrecolla and Ernesto Guillermo Leguizamón were appointed as their alternates, respectively.

The Audit Committee’s mandatory periodic duties are to:

- supervise the internal control and accounting systems as well as the reliability of the latter and all the financial information and other significant issues that are to be submitted to the SEC, CNV and BASE in compliance with the applicable disclosure policies;
- supervise the application of information policies regarding our risk management;
- ensure that the market is informed about those operations where there may be a conflict of interest with one or more of the members of the Board of Directors, controlling shareholders or other parties as defined by the applicable regulations;
- express its view on the reasonableness of fees, compensation proposals and stock option plans for directors and officers submitted by the Board of Directors;
- express its view as to compliance with laws and regulations and the reasonableness of the conditions of an issuance of shares (or convertible securities), in the case of a capital increase excluding or limiting preferential rights;
- verify compliance with the Code of Conduct;
- issue a well-founded opinion on whether the terms and conditions of relevant transactions with related parties are according to market practice, within five calendar days from the receipt of a petition issued by the Board of Directors, and at any other time at which a conflict of interests exists or might exist;
- prepare an annual performance plan for the fiscal year and notify the Board of Directors and the Supervisory Committee within 60 days from the beginning of the period;
- fulfill all the obligations stated in our By-laws and applicable laws and regulations;
- express its view on the Board of Directors’ proposals appointing (or rejecting) the external auditors to be hired and monitor the auditors’ independence;
- establish procedures for: 1) the receipt, treatment, investigation and administration of the complaints received by us regarding accounting, internal accounting controls or internal auditing matters; and 2) the confidential, anonymous submission by our employees of concerns regarding questionable accounting or internal auditing matters.

Also, regarding the internal and external auditors, the Audit Committee shall:

- review their plans; and
- evaluate their performance, and give an opinion on their performance when issuing the annual Financial Statements.

In evaluating the external auditors' performance, the Audit Committee shall:

- analyze the different services rendered by the external auditors as well as their independence, according to TR No. 7 of the Argentine Federation, any other related regulations issued by professional councils and those regulations set by Resolution No. 400/02, section 4 and Chapter 18, section 18 of the CNV rules;
- report separately the fees payable as follows: (i) fees for external audit and other related services meant to provide reliability to third parties (e.g., special reports about internal controls, shareholding prospectuses, certifications and special reports requested by regulators, etc.); and (ii) fees related to other special services different from those mentioned above, such as those associated with design and implementation of systems, laws and regulations, financial issues, etc.; and
- verify the independence of the external auditors in accordance with internal policies.

Additionally, the Audit Committee must perform the following mandatory duties contained in the regulatory framework:

- give a prior assessment, within five days of notification, that shall be used by the CNV to require us to designate an external auditor as requested by minority shareholders, as long as such shareholders represent at least 5% of our common stock (in those cases in which the minority shareholders' rights might be affected), in order to carry out one or more specific revisions. The charges of such revisions shall be paid by the petitioning shareholders (Decree No. 677/01, section 14, article e; Regulation No. 400/02, section 4; and Chapter 3, section 23, of the CNV rules);
- provide a well-founded assessment about an acquiring tender offer if by withdrawing the public offering we would cease to be a public company or our stock cease to be traded (Decree No. 677, section 32; Resolution No. 401/02, sections 25 and 27); and
- issue a report supporting a Board of Directors' resolution to buy back our shares (Decree No. 677/01, section 68, article b; Resolution No. 400/02, section 4 and Chapter 3, article 11 of the CNV rules).

Once a year, the Audit Committee shall prepare a plan for the fiscal year to be presented to the Board of Directors and to the Supervisory Committee. The Directors, members of the Supervisory Committee, managers and external auditors shall, when requested by the Audit Committee, attend its meetings, provide the Audit Committee with information and otherwise assist the Audit Committee in the performance of its functions. In order to better perform its functions, the Audit Committee may seek the advice of legal counsel and other independent professionals at our expense, pursuant to a budget approved by shareholders. The Audit Committee shall have access to the information and documents it may deem necessary to perform its duties.

According to CNV rules, at least once a year and upon the filing of the annual Financial Statements, the Audit Committee shall issue a report to the shareholders, addressing how the Committee performed its duties and the results of its work.

The aggregate remuneration paid by us during the year 2010 to the members of the Audit Committee was approximately Ps. 0.7 million. We do not provide pension, retirement or similar benefits to any member of the Audit Committee.

Supervisory Committee

The Supervisory Committee is our monitoring body as stipulated in Section No. 284 of the Commercial Companies Law. Our By-laws provide for a Supervisory Committee consisting of three Syndics and three alternate members ("Alternate Syndics"). In accordance with our By-laws, two Syndics and the corresponding Alternate Syndics are elected by a majority vote of the holders of our Class A Shares. The remaining Syndic and corresponding Alternate Syndic are elected by the majority vote of the remaining holders of our common stock. Each member of the Supervisory Committee is elected at the Annual Ordinary Shareholders' Meeting and serves for a one-year renewable term. Members of the Supervisory Committee must be lawyers or accountants qualified under Argentine law and, for the accountants, Technical Resolution No. 15. Our directors, officers and employees may not be members of the Supervisory Committee. Our By-laws require the Supervisory Committee to hold meetings at least once per month.

The primary responsibilities of the Supervisory Committee consist of monitoring our management's compliance with the Commercial Companies Law, our By-laws and the shareholders' resolutions, and without prejudice to the role of external auditors, reporting to the shareholders at the Annual Ordinary Shareholders' Meeting regarding the reasonableness of our financial information. Furthermore, the members of the Supervisory Committee are entitled to: (i) attend Board of Directors and Shareholders' Meetings, (ii) call Extraordinary Shareholders' Meetings when deemed necessary and Ordinary Shareholders' Meetings when the Board of Directors fails to do so, and (iii) investigate written inquiries initiated by shareholders. The Supervisory Committee does not control our operations or evaluate management's decisions, which are the exclusive responsibility of the Board of Directors.

The aggregate remuneration paid by us during 2010 to the members of the Supervisory Committee was approximately Ps. 0.3 million. We do not provide pension, retirement or similar benefits for Syndics and Alternate Syndics.

The following table sets out the current membership of our Supervisory Committee, each of whom was appointed at the Annual Shareholders' Meeting held on April 29, 2011, the year when each member was initially appointed and the year when their term expires:

Name	Member since	Term Expires	Position
Claudio Norberto Vázquez	2009	2012	Syndic
Diego Salaverri	2011	2012	Syndic
Alejandro Roisentul Wuillams	2009	2012	Syndic
Enrique Prini Estebecorena	2011	2012	Alternate Syndic
Damián Burgio	2011	2012	Alternate Syndic
Francisco Daniel González	2011	2012	Alternate Syndic

The Board of Directors' Meeting held on May 10, 2011, stated that the next Ordinary Shareholders' Meeting to be called to approve the Financial Statements as of December 31, 2011 shall decide about the adjustment of the mandate of the current Supervisory Committee to the one-year-mandate applicable according our By-laws.

The present principal occupations and employment history of our Syndics are set forth below:

Claudio Norberto Vázquez was born on January, 20 1965. He received a Law degree from the *Universidad de Buenos Aires*. Before joining Petrobras Argentina where he currently acts as Legal Department Manager of E&P (Exploration and Production) and G&E (Gas and Electricity), he worked for MetroGas as Legal Department Manager and for Astra Evangelista S.A. as Human Resources Manager. At present, he serves as a member of the Board of Directors of Atalaya Energy S.A. and Canadian Hunter Argentina S.A. and as Syndic of CIESA, MEGA, Distrilec; Edesur S.A. and Enecor S.A..

Diego M. Salaverri was born in Buenos Aires, Argentina, on August 7, 1964. He received a Law degree from the *Universidad Católica Argentina* in 1988. Mr. Salaverri is a founding partner of the law firm Errecondo, Salaverri, Dellatorre, González & Burgio in Argentina. He currently serves as member of the Board of Directors of Pampa Energía S.A. and Edenor and as member of the supervisory committees of a large number of public and private companies in Argentina.

Alejandro Roisentul Wuillams received a Public Accounting degree from the *Universidad de Buenos Aires* and a Master's Degree in Financial Administration of the Public Sector from the same university. Since 1993 he has acted as syndic of the *Sindicatura General de la Nación*. He was born on August 30, 1963.

Remuneration Committee

We do not have a remuneration committee. Compensation decisions are made by our senior management.

Corporate Governance Practices; New York Stock Exchange Requirements

See Item 16.G.

D. Employees

The following table sets out the number of employees according to department as of December 31, 2010, 2009 and 2008:

Department	Number of Employees as of December 31,		
	2010	2009	2008
General	2	2	2
Administration and Finance	44	45	45
Human Resources	16	15	16
Control and Corporate Governance	8	8	8
Legal Affairs	9	9	13
Regulatory and Public Affairs	9	9	6
Services	102	89	90
Safety and Environmental	17	15	14
Marketing ⁽¹⁾	-	38	39
Planning and Business Development ⁽¹⁾	-	11	10
Business ⁽¹⁾	45	-	-
Operations	639	656	675
Total	891	897	918

⁽¹⁾ In July 2010, the departments of Marketing and Planning and Business Development were merged in a new department called Business.

The following table sets out the number of employees according to geographical location as of December 31, 2010, 2009 and 2008:

Location	Number of Employees as of December 31,		
	2010	2009	2008
City of Buenos Aires	226	252	245
Province of Buenos Aires	372	339	351
Province of Chubut	57	58	62
Province of La Pampa	15	17	16
Province of Neuquén	72	69	65
Province of Río Negro	62	69	65
Province of Salta	1	2	5
Province of Santa Cruz	80	85	102
Province of Tierra del Fuego	6	6	7
Total	891	897	918

As of December 31, 2010, 2009 and 2008 the number of temporary employees working for us was 38, 17 and 22, respectively.

Under Argentine law, in the event of an unfair dismissal of an employee, the employer is required to pay the terminated employee severance, the amount of which is regulated by the Argentine Labor Law (Section 245). The severance consists of payment of one month's wages for each year of employment. The Argentine Labor Law stipulates limits to the severance payment; these limits affect only employees who earn high wages. However, the Supreme Court has ruled this severance payment limitation unconstitutional when it results in a loss of more than 33% for a terminated employee as compared to the unlimited amount.

The Supreme Court recently held the Law of Occupational Hazard Prevention unconstitutional as applied to contractors whose employees are injured in the course of employment, extending liability to the company that contracted with the contractor for the services.

Some courts have held that a company that contracts with a contractor for services is jointly liable for a contractor's obligations to provide its workers and third-party service providers with social security benefits, wages, insurance, etc., even if the service for which the company contracts is not part of the company's usual business.

Due to higher inflation rates in Argentina, conflicts between employers and unionized workers have increased recently which specifically affected us in 2010. Even though in May 2010 we signed agreements with our labor unions, one of them breached its agreement by going on two 48 hour strikes. Finally, at the end of 2010, we reached a new agreement with the labor union.

Currently, approximately 23% of our workforce is affiliated with one of three national unions, each of which has representation in each of the jurisdictions in which we operate.

E. Share Ownership

The total amount of our Class B Shares held by our directors, members of our Supervisory Committee and executive officers as of May 27, 2011 is 15,280 shares.

Our directors and executive officers, individually and together, beneficially hold less than 1% of our Class B Shares.

Item 7. Major Shareholders and Related Party Transactions

A. Major Shareholders

Our controlling shareholder is CIESA, which holds approximately 55.3% of our common stock. Local and foreign investors hold the remaining shares of our common stock. CIESA is owned 50% by Grupo Petrobras Argentina, 40% by the Trust, and the remaining 10% by EPCA (see “Item 4.— Our Information—A. Our History and Development—General” above).

In October 2009, D.E. Shaw sold its shareholding of 60,803,041 shares in our common stock to AEI. In January 2011, AEI sold 63,213,340 shares of our common stock to Broad Bay Ltd.

The following table sets forth certain information, with respect to each shareholder known to us to own more than five percent of our common stock as of May 27, 2011:

Name of Beneficial Owner	Number of Shares	% Total Common Shares	Class
CIESA.....	405,192,594	51.0000	A
CIESA.....	34,133,200	4.2962	B
ANSES.....	177,989,482	22.4028	B
Broad Bay Ltd.	63,213,340	7.9564	B

Pursuant to the Pliego and our debt agreement, CIESA may not reduce its shareholding below 51% of our share capital.

As of May 27, 2011 a total of 292,501,359 Class B shares (36.82% of the total Class B shares), were held by approximately 2,908 stockholders in Argentina.

Shareholders’ Agreement

As a result of changes in the shareholding of our controlling company, a new Shareholders’ Agreement was signed on August 29, 2005. This agreement governs certain matters relating to shareholder participation in CIESA and in us. This agreement divides the CIESA shares into five classes that grant the shareholders different rights and places obligations with respect to us and CIESA, mainly regarding the designation of the members of our Board of Directors and our Supervisory Committee.

Under this agreement, Class A1 and B1 shares are owned by Group Petrobras Argentina, Class A2 and B2 shares belong to the Trust and Class B3 shares are owned by EPCA.

Transfers of CIESA and Our Shares. The Shareholders' Agreement provides certain rights of first refusal and "tag-along" or co-sale rights in favor of EPCA, in the event of a proposed transfer of CIESA shares. In particular, before any sale of shares to outside parties, the selling shareholder must offer to sell such shares to EPCA at the price agreed upon in a written purchase proposal from the outside party seeking to purchase such shares. In the event that EPCA does not choose to purchase the shares, it can opt to have a portion of its own shares (the allotted portion is dependent on the number of shares being sold) additionally included in the shares to be sold by the selling shareholder to the third party.

Under the Shareholders' Agreement, the sale or transfer of any of our shares held by CIESA requires an affirmative vote of at least 60% of CIESA's issued and outstanding common voting shares.

Election of Our Directors and Officers; Voting. The Shareholders' Agreement also contains provisions governing the voting of shares held by CIESA, the election of the members of the Board of Directors and our Supervisory Committee, the appointment of certain officers and certain other matters.

Our Board of Directors consists of nine Directors (see "Item 6. Directors, Senior Management and Employees—A. Directors and Senior Management"). Under the Shareholders Agreement, the CIESA directors designated by each of the Class A1, Class A2, Class B1 and Class B3 shareholders shall cause CIESA to nominate directors, alternate directors and syndics pursuant to the instructions given by each of such class of shareholders. Thus, indirectly, the Class A1 shareholders (controlled by Petrobras Argentina) nominate two regular directors, two alternate directors, one regular syndic and one alternate syndic, the Class A2 shareholders (controlled by the Trust) nominate two regular directors and two alternate directors, the Class B1 shareholders (controlled by Group Petrobras Argentina nominate one regular director, one alternate director, one regular syndic and one alternate syndic and the Class B3 shareholders (controlled by EPCA) nominate one regular director, one alternate director, one regular syndic and one alternate syndic. The three remaining Independent Directors must be unanimously approved by all the shareholders of CIESA.

Under the terms of the Shareholders' Agreement, but subject to their overriding duty to protect our corporate interest and the common interest of all of our shareholders, it is contemplated that the CIESA-nominated Directors shall vote unanimously in favor of the candidates nominated by the Class A1 shareholders for Chairman of the Board of Directors and CEO. The Vice-Chairman of our Board of Directors is nominated by the Class B3 shareholders.

Regarding the designation of our Supervisory Committee members, Group Petrobras Argentina Group appoints two Syndics and the same number of Alternate Syndics. The position of Chairman of our Supervisory Committee is held by one of the two Syndics appointed by the Class A1 shareholders. The remaining Syndic and Alternate Syndic are appointed by the Class B3 shareholders.

Actions Requiring Special Shareholder Approval. The Shareholders' Agreement states that a full majority vote of our Board of Directors (such majority must include the affirmative vote of the Class B3 shareholders) is required to approve the following decisions, among others: (i) the sale of our assets above a certain amount, outside of the day-to-day course of business; (ii) approval of our annual budget and material amendments thereto and certain related matters; (iii) commitments to incur, loans or operating expenses for an amount that exceeds by more than 10% the amount approved in our annual budget; (iv) capital expenditures which are individually in excess of US\$500,000; (v) the setting of compensation of senior management; (vi) approval to make any claims of and any transactions related to, or negotiations of claims against us in excess of US\$50,000; and (vii) the termination or extension of the Technical Assistance Agreement.

Tender Offer Regime. According to Decree No. 677/01, issued by the Executive Branch, public companies will be included in the Tender Offer Regime, starting from the date of the Shareholders' Meeting approving the company's inclusion in the regime or automatically upon the first Shareholders' Meeting held twelve months after the enforcement of the CNV resolution regulating the matter, issued in March 2003. The Decree also provides that if a public company is not willing to be included in such regime, it must incorporate an article to its By-laws stating the following: "Company not Subject to the Tender Offer Regime." Such resolution must be adopted no later than in the shareholders' meeting mentioned above. As our shareholders decided not to adhere to this regime, our shareholders approved an amendment to our By-laws to incorporate the exclusion expressly at the Shareholder's Meeting held on April 2, 2004.

B. Related Party Transactions

Under the Technical Assistance Agreement, Petrobras Argentina renders assistance to us in its role of technical operator. The term of the Technical Assistance Agreement originally entered into with EPCA was for eight years from December 28, 1992, renewable automatically upon expiration for additional eight-year periods. In November 2008, we and Petrobras Argentina agreed the renewal of the Technical Assistance Agreement for a three-year term, expiring on December 28, 2011. The Settlement Agreement mentioned in “Item 4. Our Information—A. Our History and Development—General” includes a term which provided for the assignment of the Technical Assistance Agreement to Petrobras Argentina. This transfer, which was approved by ENARGAS in June 2004, was carried out on July 15, 2004. As from that date, Petrobras Argentina has been in charge of providing services related to, among others, the operation and maintenance of the gas transportation system and related facilities and equipment, to ensure that the performance of the system is in conformity with international standards and in compliance with certain environmental standards. For these services, we pay a monthly fee based on the higher of: (i) a percentage of certain of our defined income or (ii) a specified fixed annual amount.

Additionally, under each of our business segments, we render to Petrobras Argentina the following services:

- gas transportation service for a capacity of 106 MMcf/d under long term firm transportation capacity contracts which expire in 2013 and 2014;
- midstream services (in Río Neuquén oilfield) through which we compress, dehydrate, store and dispatch natural gas. This contract was signed in 1999 and it finalizes in 2017;
- under a long term agreement which expired in January 2011, and later extended to June 2011, we process natural gas and market liquids products on behalf of Petrobras Argentina in our Cerri Complex. For this service, we collect a commission on the average monthly sale price obtained from our sales of its products in the domestic or international markets.

The details of significant outstanding balances (stated in thousands of pesos) for transactions with related parties as of March 31, 2011 and December 31, 2010, are as follows:

Three-month period ended March 31, 2011

We do not have any outstanding loans to related parties.

C. Interests of Experts and Counsel

Not applicable.

Item 8. Financial Information

A. Consolidated Statements and Other Financial Information

Our Financial Statements, which are set forth in the Index to Financial Statements in Item 18, are filed as part of this Annual Report.

Exports

In 2010, our export revenues from liquids production and commercialization segment were Ps. 517.5 million and represented 31% of our total net revenues. Additionally, the total volume of sales from liquids was 990,706 short tons, and the volume of sales from liquids exports was 331,791 short tons. These volumes also include sales made on account of third parties.

In May 2004, the effective tax rate for LPG exports was increased from 4.76% to 16.67%. On May 24, 2007, it was increased to 20%.

Since November 2007 and March 2008, a variable export tax regime has been in force for the natural gasoline and LPG exports, respectively, with a minimum effective tax rate of 31.03% when international prices are lower than US\$920 (ARA NWE) and US\$663 (Mont Belvieu) per metric ton, respectively. See “Item 5. A. Operating results—Discussion of results of operations for the three years ended December 31, 2010, 2009 and 2008” for more information.

Legal and Regulatory Proceedings

a) In February 2005, we were served notice by the CNV that certain notes that we issued in December 2004 in the amount of US\$178 million did not fulfill the requirements of Article 56 of Chapter VI of the CNV Standards and CNV Resolution No. 470. If the CNV’s interpretation is upheld, those notes would not be entitled to the benefits of the exemption from income tax withholding provided by Law No. 23,576, and we, therefore, would be exposed to a contingency for the payment of withholding amounts associated with the income tax payable on interest paid in respect of those notes from their issue date in December 2004. See “Item 5. Operating

and Financial Review and Prospects — A. Operating Results — Year 2010 compared to year 2009 — Net financial expense.”

On February 18, 2005, we filed an appeal with the CNV, alleging sufficient grounds to support the applicability of Article 56, Chapter VI of CNV Standards and Resolution No. 470/04. However, the CNV denied our appeal and on July 8, 2005, we filed an appeal with the Ministry of Economy and Production, which was rejected in November 2006. On December 6, 2006, we filed a second appeal with that Ministry seeking reconsideration of the rejection, which was rejected in June 2007. In November 2007, we challenged said resolution before the Federal Administrative Court.

The amount of such contingency is an uncertain amount between US\$8 million and US\$24 million as of December 31, 2010 (including interest as of this date), depending on the applicable withholding tax rates determined on payments of interest, which in turn will depend on the country of residence of the note holders at the date of each interest payment. We do not have available information that permits the identification of the country of residence of each note holder on each interest payment date.

We believe that we have sufficient legal grounds to defend our position that no withholding was required, and accordingly, we have not recorded any provision in respect of this proceeding.

b) On November 30, 2007, we were served notice of the summary proceedings initiated against us by the BCRA, which charged us with the late settlement of foreign currencies for an approximate amount of US\$ 14.7 million. The transactions at issue were conducted between January 2002 and February 2003, a period in which the applicable exchange regulations were subject to frequent changes and the terms for the settlement of foreign currencies were shorter than the current ones.

On February 25, 2008, we filed a motion to dismiss before the BCRA requesting the dismissal of the summary proceedings on the grounds of lack of foreign exchange violation. On September 28, 2010, documentary hearings were conducted and, on October 13, 2010, final arguments were given and the case is still pending. Based on the opinion of our legal advisors, the amount of the fine that may result from an eventual adverse sentence will not be greater than US\$ 7.3 million. We believe that we have several levels of appeal through which we may defend our position, and accordingly, we have not recorded any provision in respect of this proceeding.

Tax Claims

a) In the framework of the Tax Agreement subscribed by the Argentine government and the Provinces in 1993, and as from the enactment of provincial Law No. 11,490, the Tax Bureau of the Province of Buenos Aires has been required to exempt liquids sales from the turnover tax. In September 2003, the Tax Bureau of the Province of Buenos Aires, through Resolution No. 4,560/03, denied the exemption and claimed unpaid taxes on accrued liquids sales since 2002. In October 2003, we filed an administrative appeal with the Tax Court of the Province of Buenos Aires.

In February 2007, the Tax Court partially upheld our complaint. In its pronouncement, the Tax Court stated that ethane sales were within the scope of the turnover tax exemption but that neither propane nor butane sales qualified for the exemption in the domestic market, because they were not raw materials for an industrial process.

We filed an appeal in May 2007 before the Province of Buenos Aires Court alleging that propane and butane sales might be utilized for other uses in addition to those in the petrochemical industry. As of the date of this Annual Report, the Court has not issued a final decision.

On September 26, 2005, we were notified of the results of the tax assessment process regarding the turnover tax for the period January 2002 - July 2003, which amounted to Ps. 4.4 million plus interest. On October 18, 2005, we filed a motion to dismiss on our belief that the liquids sales activity was conducted under the tax exemption regime discussed above. On April 12, 2006 the motion to dismiss was rejected and therefore, the Company filed corresponding appeals with the Tax Bureau of the province of Buenos Aires and jointly with the Arbitral Commission. For that reason, the Tax Bureau resolved that until the Arbitral Commission notifies the parties of its resolution of the matter, the process is suspended. On April 20, 2010, the Arbitral Commission ruled against us, and thus, we filed an appeal before the Plenary Commission.

On February 19, 2008, we were notified with a formal assessment notice of Ps. 3.6 million (not including interest) regarding the payment of the turnover tax corresponding to the fiscal period ranging from August 2003 to December 2004. On March 11, 2008, we filed a motion to dismiss the new tax assessment before the Tax Bureau of the Province of Buenos Aires which was rejected and thus, the Company filed an appeal with the Tax Bureau of this province in January 2009. Also, we appealed with the Arbitral Commission, and accordingly, the Tax Bureau of this province suspended the process until the Arbitral Commission issues its resolution of the matter.

As of December 31, 2010, we maintain a provision of Ps. 29.1 million to cover potential losses relating to the claims of the Tax Bureau of the Province of Buenos Aires.

b) In November 2002, the Tax Bureau of the Province of Santa Cruz sent us a formal assessment notice for the payment of a turnover tax calculated on the value of the natural gas used by us as fuel to render our transportation services. This assessment corresponds to the period from January 1998 to October 2002. In August 2005, we paid the amount claimed of Ps. 1.6 million (including interest to December 4, 2002) and started a tax recovery process, first exhausting all other procedural steps, with the Tax Bureau of the province and then initiating a proceeding in the provincial Tax Court.

In November 2005, we received a notice from the Tax Bureau of the Province of Río Negro, claiming payment of Ps. 0.2 million, on the same grounds as those of the Province of Santa Cruz, for the period from January 1999 to May 2005. On February 1, 2008, we initiated a tax recovery process with the Tax Court of the province of Río Negro to obtain the refund of Ps. 0.5 million paid in November 2007, after exhausting the same procedural steps followed in the case in the province of Santa Cruz.

In December 2008, the Tax Bureau of the province of Tierra del Fuego e Islas del Atlántico Sur sent us a formal assessment notice for the payment of Ps. 6.4 million corresponding to the 2002-2007 period, which we contested. On October 19, 2009, said Tax Bureau notified us of the dismissal of our denial motion and thus, on October 28, 2009, we filed an administrative appeal.

As of December 31, 2010, we have recorded a provision of Ps. 57.4 million in respect of these contingencies under the line item “Provisions for contingencies” which amount was determined in accordance with the estimations of tax and interest, that would be payable as of such date, if all of the above mentioned proceedings were resolved against the Company.

However, our management believes that, if our position fails and the turnover tax has to be paid, we have a right to recover it by a transportation tariff increase as set forth in our License.

Other Litigation

As discussed above under “Item 4. Our Information—B. Business Overview—Gas Transportation—Regulatory Framework”, we are involved in the process of renegotiating our public service contracts with UNIREN.

In addition to the matters discussed above, we are a party to certain lawsuits and administrative proceedings arising in the ordinary course of business. Although no assurances can be given, we believe we have meritorious defenses, which we will assert vigorously to challenge all claims, and that possible liabilities from these claims will not have a material adverse effect on our consolidated financial position or results of operations.

Dividend Distribution Policy

Our Board of Directors does not have a formal, written dividend distribution policy. Each year, our Board evaluates whether to submit a distribution proposal to the Shareholders’ Meeting. In making this evaluation, the Board of Directors considers our financial results, the liquidity of the Company, our future financing needs and other information, including economic and financial projections for both the Company and the economy as a whole. See “Item 3. Key Information—A. Selected Financial Data—Dividends.”

B. Significant Changes.

No undisclosed significant change has occurred since the date of our Financial Statements.

Item 9. The Offer and Listing

A. Offer and Listing Details

The table below shows the high and low market prices of the Class B Shares on the BASE, stated in historical Argentine pesos and of the ADRs on the New York Stock Exchange (“NYSE”), stated in U.S. dollars, for each of the last five fiscal years.

Years	NYSE (in US\$)		BASE (in Ps.)	
	High	Low	High	Low
2006	7.99	4.44	4.20	2.74
2007	8.47	5.40	5.18	3.43
2008	5.98	1.41	3.65	1.05
2009	3.35	1.73	2.49	1.31
2010	6.19	2.71	4.72	2.02

The table below shows the high and low market prices of the Class B Shares on the BASE, stated in historical Argentine pesos and of the ADRs on the NYSE, stated in U.S. dollars, for each full quarterly period within the two most recent fiscal years.

Quarters	2010				2009			
	NYSE (in US\$)		BASE (in Ps.)		NYSE (in US\$)		BASE (in Ps.)	
	High	Low	High	Low	High	Low	High	Low
First Quarter	3.39	2.71	2.60	2.02	3.20	1.73	2.02	1.31
Second Quarter	3.75	3.05	2.88	2.43	2.62	1.83	1.83	1.45
Third Quarter	3.84	3.21	2.96	2.52	2.55	2.00	2.35	1.70
Fourth Quarter	6.19	3.51	4.72	2.74	3.35	2.56	2.49	2.05

The table below shows the high and low market prices of the Class B Shares on the BASE, stated in historical Argentine pesos and of the ADRs on the NYSE, stated in U.S. dollars, for each full monthly period within the six most recent months.

Months	NYSE (in US\$)		BASE (in Ps.)	
	High	Low	High	Low
December 2010	6.19	5.05	4.72	4.00
January 2011	6.24	5.24	4.95	4.25
February 2011	6.19	5.21	5.06	4.29
March 2011	5.28	4.20	4.37	3.60
April 2011	5.30	4.37	4.50	3.65
May 2011	5.37	3.44	4.69	3.10

B. Plan of Distribution

Not Applicable.

C. Markets

The Argentine Securities Market. In Argentina, the oldest and largest exchange is the BASE, founded in 1854. The BASE is the exchange on which the majority of equity trades in Argentina are executed. As of December 31, 2010, the market capitalization of shares of the 98 companies (excluding mutual funds) listed on the BASE was approximately Ps. 1,900,163 million. At the end of December 2010, the top 10 listed securities

represented 94% of the total. Trading in securities listed on an exchange is conducted through the Mercado de Valores (“**Stock Market**”) affiliated with such exchange.

Securities may also be listed and traded through over-the-counter market brokers who are linked to an electronic reporting system. The activities of such brokers are controlled and regulated by the Mercado Abierto Electrónico S.A. (the “**MAE**”), an electronic over-the-counter market reporting system that functions independently from the Mercado de Valores de Buenos Aires S.A. (the “**Buenos Aires Stock Market**”) and the BASE. Under an agreement between the BASE and the MAE, trading in equity and equity-related securities is conducted exclusively on the BASE and trading in corporate debt securities is conducted on both the BASE and the MAE. Trading in Argentine government securities, which are not covered by the agreement, may be conducted on either or both of the BASE and the MAE. The agreement does not extend to other Argentine exchanges.

Changes to the legal framework of securities trading have been introduced, permitting issuance and trading of new, non-bank financial products in the Argentine capital markets, including commercial paper, new types of corporate bonds, futures and options. The Argentine government deregulated brokerage fees and eliminated transfer and stamp taxes on securities transactions in November 1991.

The Buenos Aires Stock Market. The Buenos Aires Stock Market, which is affiliated with the BASE, is the largest stock market in Argentina. The Buenos Aires Stock Market is a corporation whose 250 shares are owned by a number of members who are the only individuals and entities authorized to trade in the securities listed on the BASE. Trading on the BASE is conducted by open outcry and a computer-based negotiation system called SINAC from 11:00 A.M. to 5:00 P.M. each business day. The BASE also operates an electronic continuous market system from 11:00 A.M. to 5:00 P.M. each business day, on which privately-arranged trades are registered and made public. To control price volatility, the Buenos Aires Stock Market operates a system that restricts dealing in shares of any issuer when changes in the price of such issuer’s shares varies 15% from the previous closing price, unless trading at the top price.

Investors in the Argentine securities market are primarily individuals, companies and institutional investors consisting of a limited number of mutual funds. Certain information regarding the Argentine equities market is set forth in the table below.

	<u>2006</u>	<u>2007</u>	<u>2008</u>	<u>2009</u>	<u>2010</u>
Market capitalization (US\$ in billions)	401.5	563.0	357.3	574.9	477.9
Average daily trading volume (US\$ in millions)	20.0	28.5	26.5	12.1	14.5
Number of listed companies	107	109	104	109	107

Information contained in Item 14 of the Company’s Registration Statement on Form F-1 (Registration No. 33-85178) is hereby incorporated by reference.

C. Material Contracts

New Debt Obligations

On May 15, 2007, in connection with the refinancing of all of our debt incurred as part of the Restructuring, we issued a series of new notes in aggregate principal amount of US\$500,000,000 (the “New Notes”). The issuance of the New Notes under our Medium Term Note Program, which provides for the issuance of up to a maximum principal amount of US\$650 million in notes, was authorized by resolutions of an extraordinary meeting of shareholders dated December 21, 2006, and by resolutions of our Board of Directors adopted on January 4, 2007, March 30, 2007 and April 20, 2007.

The scheduled maturity date of the New Notes is May 14, 2017. The New Notes accrue interest at an annual fixed rate of 7.875%, payable semi-annually. Principal amortization payments are required commencing on May 14, 2014 with the following schedule: 25% on May 14, 2014, 25% on May 14, 2015, 25% on May 14, 2016 and 25% on May 14, 2017. Taking into account the New Notes that we purchased in the market and cancelled in 2008, 2009 and 2010, each scheduled amortization payment will be US\$ 93,506,000.

The New Notes are redeemable, in whole but not in part, prior to maturity at our option any time after May 14, 2012 at a redemption price as set forth in the table below, together with accrued interest thereon and any additional amounts to the redemption date.

<u>During the 12 Months Beginning</u>	<u>Applicable Percentage</u>
On the 5th anniversary of the Issue Date.....	103.938%
On the 6th anniversary of the Issue Date.....	101.969%
On the 7th anniversary of the Issue Date.....	100.984%
On the 8th anniversary of the Issue Date and thereafter.....	100%

We are also permitted to redeem the New Notes in whole, but not in part, at a price equal to 100% of the principal amount outstanding if, as result of any change in, or amendment to, the laws or regulations of Argentina or any governmental authority thereof or therein having power to tax or as a result of any change in the application or official interpretation of such laws or regulations, we become obligated to pay additional amounts with respect to the New Notes and we cannot avoid such obligation by taking reasonable measures available to us.

In the event that the Republic of Argentina, directly or indirectly through any one or more controlled entities, comes to own shares representing more than 50% of the voting power of all of our shares, holders of New Notes are entitled to require us to purchase all or a portion of the New Notes at price in cash equal to 101% of the principal amount of the New Notes so purchased. The New Notes are general, direct, unsecured and unsubordinated obligations and rank at all times *pari passu* in all respects, without any preference among themselves, with all of our other present and future unsecured and unsubordinated obligations, other than obligations preferred by statute or by operation of law.

Covenants

We are subject to several restrictive covenants under the terms of the New Notes, which include, among others, the following:

- limitations on our ability to terminate our License or take any action that, in our reasonable opinion, would result in the termination of the License. We may not agree to amend or waive any terms of the License unless such amendment or waiver would not, in our reasonable opinion, adversely affect (i) our ability to meet our obligations under the New Notes on a timely basis or (ii) any material rights or interest of the trustee or the holders under the indenture or the New Notes;
- a requirement that we not enter into or consent to any amendment, restatement or modification of the Technical Assistance Agreement or any successor agreement thereto, other than an amendment, restatement or modification that is not materially adverse to us and our subsidiaries, taken as a whole;

- a limitation on our and our subsidiaries' ability to create liens on our property, assets or revenues, other than certain permitted liens;
- a limitation on our and our subsidiaries' ability to incur additional indebtedness unless we meet certain financial ratios and no event of default exists, other than certain permitted indebtedness;
- a limitation on our and our subsidiaries' ability to pay dividends and make certain other restricted payments and investments with respect to any fiscal year or fiscal semester unless: (i) no event of default or potential event of default shall have occurred and be continuing and (ii) immediately after giving effect to such restricted payment, we would be able to incur at least US\$1.00 of additional indebtedness pursuant to the limitation on indebtedness covenant;
- limitations on our and our subsidiaries' ability to enter into sale-leaseback transactions;
- limitations on our and our subsidiaries' ability to enter into a transaction with an affiliate, unless such transaction is on terms that are not materially less favorable to us or our subsidiary than we or such subsidiary would obtain in a comparable arm's-length transaction with a non-affiliate;
- a limitation on our and our subsidiaries' ability to sell our assets; and
- a limitation on our and our subsidiaries' ability to enter into a merger, consolidation or similar transaction;

Events of Default

The New Notes contain the following events of default, among others:

- default in the payment of principal, interest or any other amount due under the terms of the New Notes after a specified grace period;
- breach of obligations contained in the New Notes after a specified cure period;
- the occurrence of an event of default under our other debt obligations;
- the occurrence of certain bankruptcy events or enforcement proceedings;
- enforcement by any creditor of any mortgage, charge, pledge, lien or other encumbrance created or assumed by us or one of our subsidiaries exceeding US\$10 million;
- failure to obtain certain required governmental authorizations when required or if any such authorizations are rescinded, terminated, lapse or cease to be in full force and effect; and
- the occurrence of certain material adverse events with respect to our License, such as the revocation, suspension for a period of greater than 120 days or termination of the License.

D. Exchange Controls

Since the end of 2001 the Argentine government has imposed controls on the foreign exchange market and the movement of capital. During 2002, these controls were extensive, but since 2003 they have been progressively and considerably eased.

The most important provisions currently in force, that affect us, are mentioned below:

- there is an obligation to enter at least 30% of the funds received as payment for the export of liquids into the exchange market and to convert it into local currency within a time limit established by the Ministry of Economy and Production;
- Argentine individuals and companies are authorized to buy up to US\$ 2,000,000 per month;

- principal and interest payments of financial obligations may be freely made, provided that the debt has been previously reported to the BCRA, negotiated in the local foreign exchange market and taken for a minimum term;
- companies may freely transfer dividends corresponding to audited Financial Statements without prior BCRA approval.

E. Taxation

General

The following is a general summary of certain Argentine and United States federal income tax matters that may be relevant to the ownership and disposition of ADSs or Class B Shares. The summary describes the principal tax consequences of the ownership and disposition of ADSs or Class B Shares, but it does not purport to be a comprehensive description of all of the tax considerations that may be relevant to a holder of ADSs or Class B Shares.

The summary is based upon tax laws of Argentina and the United States and regulations thereunder as in effect on the date of this Annual Report, which are subject to change, possibly on a retroactive basis. In addition, the summary is based in part on representations of the Depositary and assumes that each obligation provided for in or otherwise contemplated by the depositary agreement or any other related document will be performed in accordance with its terms. Holders of ADSs or Class B Shares should consult their own tax advisors as to the United States, Argentine or other tax consequences of the acquisition, ownership and disposition of the ADSs or Class B Shares in their particular circumstances.

Argentine Taxes

Taxation of Dividends. Dividends of our cash, property or capital stock paid or distributed to holders of Class B Shares or ADSs are currently exempt from Argentine withholding or other taxes. However, according to Law No. 25,063, published on December 30, 1998, cash or other type of dividend distribution, exceeding accumulated net income at year end determined as stipulated by tax regulations, will be subject to a 35% withholding tax as a sole and definite payment.

Taxation of Capital Gains. Capital gains derived by non-Argentine residents from the sale, exchange or other disposition of ADSs or Class B Shares are not subject to income tax.

Tax on Personal Property (Individuals). The Argentine Tax authority has introduced some amendments to the Personal Property Tax. In accordance with the Law No. 25,585, the personal tax corresponding to the ownership of securities issued by entities domiciled in Argentina, whose direct owners are individuals domiciled in Argentina or abroad and entities domiciled abroad, will be liquidated and deposited by the entity that has issued such securities. The applicable rate is 0.50% on the equity value according to the last Financial Statements as of each respective fiscal year. The Law presumes that securities whose holders are entities domiciled or located abroad indirectly belong to individuals domiciled abroad.

We are responsible for depositing such tax and have the right to recover such amount from holders, even withholding and/or liquidating the securities which caused such tax payment. This Amendment was effective starting fiscal year 2002.

VAT. The sale, exchange or other disposition of ADSs or Class B Shares is not subject to VAT.

Transfer Taxes. The sale, exchange or other disposition of ADSs or Class B Shares is not subject to transfer taxes.

Purchase or Sale of Foreign Currency. There is no tax on the purchase or sale of foreign currency.

Deposit and Withdrawal of Class B Shares in Exchange of ADSs. No Argentine tax is imposed on the deposit or withdrawal of Class B Shares in exchange for ADSs.

Other Taxes. There are no Argentine inheritance or succession taxes applicable to the ownership, transfer or disposition of ADSs or Class B Shares. There are no Argentine stamp, issue, registration or similar taxes or duties payable by holders of ADSs or Class B shares.

Tax Treaties. Argentina has entered into tax treaties with several countries. A tax treaty between Argentina and the United States has been signed but has not yet been ratified and therefore is not currently in effect. It is not clear when, if ever, the treaty will be ratified or will enter into effect.

United States Taxes

General. This discussion relating to certain US federal income tax consequences applies only to a US holder (as defined below) who holds our Class B Shares or ADSs. It applies to holders only if he or she holds our Class B Shares or ADSs as capital assets for tax purposes and is not a member of a special class of holders subject to special rules, including: a dealer in securities; a trader in securities that elects to use a mark-to-market method of accounting for his or her securities holdings; a tax-exempt organization; an insurance company, a person liable for alternative minimum tax; a person that actually or constructively owns 10% or more of our voting stock; a person that holds Class B Shares or ADSs as part of a hedging or straddle or conversion transaction; or a person whose functional currency is not the U.S. dollar.

This discussion is based on the US Internal Revenue Code of 1986, as amended, its legislative history, existing and proposed regulations, published rulings and court decisions, and the laws of Argentina all as currently in effect. These laws are subject to change, possibly on a retroactive basis.

A holder is a US holder if such holder is a beneficial owner of Class B Shares or ADSs and such holder is: a citizen or resident of the United States; domestic corporation; or other entity taxable as a corporation; an estate whose income is subject to US federal income tax regardless of its source; or a trust, if a US court can exercise primary supervision over the trust's administration and one or more US persons are authorized to control all substantial decisions of the trust.

In general, and assuming that the depository for the ADRs will fulfill each obligation in the depository agreement and related agreements, for US federal income tax purposes, a holder of ADRs evidencing ADSs will be treated as the owner of the underlying Class B Shares represented by those ADSs, and exchanges of Class B Shares for ADRs, and ADRs for Class B Shares, will not be subject to US federal income tax.

This discussion does not generally address any aspects of US taxation other than federal income taxation. Holders of Class B Shares or ADSs are urged to consult their tax advisors regarding the US federal, state and local tax consequences of owning and disposing of the Class B Shares or ADSs in their particular circumstances.

Taxation of Dividends. Subject to the passive foreign investment company ("PFIC") rules discussed below, a US holder must include in his or her gross income the gross amount of any dividend (or other distribution, other than certain distributions in redemption of ADSs or Class B Shares or distributions of our capital stock or rights to subscribe for our capital stock) paid by us out of our current or accumulated earnings and profits (as determined for US federal income tax purposes). If the holder is a non-corporate US holder, dividends paid to him or her in taxable years beginning before January 1, 2013 that constitute qualified dividend income will be taxable at a maximum tax rate of 15% provided that the shares or ADSs are held for more than 60 days during the 121-day period beginning 60 days before the ex-dividend date and certain other holding period requirements are met. Dividends with respect to the Class B Shares or ADSs generally will be qualified dividend income, provided that in the year that the holder receives the dividend, the Class B Shares or ADSs are readily tradable on an established securities market in the US.

The holder must include the gross amount of dividends in income when the holder, in the case of Class B Shares, or the depository, in the case of ADSs, receive the dividend, actually or constructively. The dividend will not be eligible for the dividends-received deduction generally allowed to US corporations in respect of dividends received from other US corporations. Distributions in excess of current and accumulated earnings and profits, as determined for US federal income tax purposes, will be treated as a non-taxable return of capital to the extent of a holder's basis in the ADSs or Class B Shares and thereafter as capital gain.

The amount of the dividend distribution that a holder must include in his or her income will be the U.S. dollar value of the Argentine peso payments made, determined at the spot Argentine peso/U.S. dollar rate on the

date such dividend distribution is includible in such holder's income, regardless of whether the payment is in fact converted into U.S. dollars. Generally, any gain or loss resulting from currency exchange fluctuations during the period from the date a holder includes the dividend payment in income to the date such payment is converted into U.S. dollars will be treated as ordinary income or loss and will not be eligible for the special tax rate applicable to qualified dividend income. Such gain or loss will generally be income or loss from sources within the United States for foreign tax credit limitation purposes.

For foreign tax credit purposes, the dividend will be income from sources outside the United States. Dividends will, depending on the holder's circumstances, generally be either "passive" or "general" income, for purposes of computing the foreign tax credit allowable to the holder. No US foreign tax credit will be allowed to US holders of Class B Shares or ADSs in respect of any personal property or similar tax imposed by Argentina (or any taxing authority thereof or therein). Special rules apply in determining the foreign tax credit limitation with respect to dividends that are subject to the maximum 15% tax rate.

Distributions of additional shares to US holders with respect to their Class B Shares or ADSs that are made as part of a pro rata distribution to all shareholders generally will not be subject to US federal income tax.

Taxation of Capital Gains. Subject to the PFIC rules discussed below, a US holder that sells or otherwise disposes of Class B Shares or ADSs will recognize gain or loss for US federal income tax purposes in an amount equal to the difference between the U.S. dollar value of the amount realized and his or her tax basis (determined in U.S. dollars) in such shares or ADSs. Capital gain of a non-corporate US holder is generally taxed at preferential rates where the holder has a holding period greater than one year. The gain or loss will generally be income or loss from sources within the US for foreign tax credit limitation purposes.

PFIC Rules. We believe the Class B Shares or ADSs should not be treated as stock of a PFIC for United States federal income tax purposes, but this conclusion is a factual determination that is made annually and thus may be subject to change. The application of the PFIC rules to a corporation such as ours, a substantial portion of whose business is the processing and selling of liquids, is not entirely clear. If we were to be treated as a PFIC, unless a US holder elects to be taxed annually on a mark-to-market basis with respect to the Class B Shares or ADSs, gain realized on the sale or other disposition of the shares or ADSs would in general not be treated as capital gain. Instead, the US holder would be treated as if he had realized such gain and certain "excess distributions" ratably over the holding period for the shares or ADSs and would be taxed at the highest tax rate in effect for each such year to which the gain was allocated, together with an interest charge in respect of the tax attributable to each such year. In addition, dividends received from us will not be eligible for the special tax rates applicable to qualified dividend income if we are a PFIC either in the taxable year of the distribution or the preceding taxable year, but instead will be taxable at rates applicable to ordinary income.

F. Dividends and Paying Agents.

Not applicable.

G. Statement by Experts.

Not applicable.

H. Documents on Display

We are subject to the informational requirements of the CNV and the BASE and file reports and other information relating to our business, financial condition and other matters with the CNV and the BASE. You may read such reports, statements and other information, including our publicly-filed Financial Statements, at the public reference facilities of the CNV and BASE maintained in Buenos Aires. We are also required to file annual and special reports and other information with the SEC. You may read and copy any documents filed by us at the SEC's public reference room at 100 F Street, N.E., Room 1580, Washington, D.C. 20549. Please call the SEC at 1-800-SEC-0330 for further information on the public reference room. Our filings with the SEC will also be available to the public at the offices of the NYSE, 11 Wall Street, New York, New York 10005.

We have appointed The Bank of New York to act as depositary for our ADRs. For so long as our ADRs are deposited with the depositary, we will furnish the depositary with our annual reports; and summaries of all notices of general meetings of shareholders and other reports and communications that are made generally available to our shareholders.

The depositary will, as provided in the depositary agreement, arrange for the mailing of summaries in English of such reports and communications to all record holders of our ADRs. Any record holder of ADRs may read such reports, notices, or summaries thereof, and communications at the depositary's office. The depositary's office is located at 111 Wall Street, New York, NY 10043.

Whenever a reference is made in this Annual Report to a contract or other document of ours, please be aware that such reference is not necessarily complete and that you should refer to the exhibits that are a part of the Annual Report for a copy of the contract or other document. You may review a copy of the Annual Report at the SEC's public reference room in Washington, D.C.

I. Subsidiary Information

Not applicable.

Item 11. Quantitative and Qualitative Disclosures About Market Risk

Market risk represents the risk of loss that may impact our consolidated financial position, results of operations or cash flows due to adverse changes in financial market prices and interest rates. We are exposed to market risk in the areas of interest rates and foreign currency exchange. This discussion contains forward-looking statements that are subject to risks and uncertainties. Actual results could vary materially as a result of a number of factors. Uncertainties that are either non-financial or non-quantifiable, such as political, economic, tax, other regulatory or credit risks, are not included in the following assessment of our market risks.

Interest Rate Risk

Our exposure to market risk associated with changes in interest rates is limited to our current investments.

We place our cash and current investments in high quality financial institutions in Argentina, the United States of America and Europe. Our policy is to limit exposure with any one institution. Our temporary investments primarily consist of money market mutual funds and fixed-term deposits. As of December 31, 2010, current investments amounted to Ps. 619.3 million.

With regard to our debt obligations, as a general matter, we are not exposed to interest rate risk because all of our debt bears interest at a fixed rate.

Foreign exchange exposure

Our primary market risk exposure is associated with changes in the foreign currency exchange rates since our debt is denominated in U.S. dollars. As of December 31, 2010, our net monetary liability position that is subject to exchange rate fluctuations amounted to Ps. 115.5 million.

As discussed herein, the Argentine government has adopted various economic measures, including the repeal of the Convertibility Law and the pesification of our gas transportation revenues. Therefore, our results of operations are very susceptible to changes in the peso/U.S. dollar exchange rate because more than Ps. 500 million of our annual revenues are denominated in pesos while substantially all our liabilities are denominated in U.S. dollars.

Sensitivity analysis disclosure to interest rates and exchange rates

In view of the nature of our current investments, an immediate 100 basis points parallel shift change in the interest rate curve would not have a significant impact on the total value of our current investments.

The potential loss in our net monetary liability position held as of December 31, 2010, that would have resulted from a hypothetical, instantaneous and unfavorable 10% change in the current peso/U.S. dollar exchange rates would have been approximately Ps. 45.9 million.

Our New Debt Obligations accrue interest at a fixed rate. Therefore, we do not currently have an exposure to changes in interest rates, except as noted above with respect to current investments. The following table provides information presented in our reporting currency, Argentine pesos, with respect to our foreign

exchange exposure. For debt obligations, the table presents principal cash flows and interest rate by expected maturity dates, considering the outstanding debt as of December 31, 2010.

	Expected maturity dates ⁽⁴⁾					Thereafter	Total	Fair value ⁽²⁾
	2011	2012	2013	2014	2015			
	(in millions of pesos) ⁽¹⁾							
Debt denominated in U.S. dollars								
Fixed rate	118.1	118.4	118.1	475.0	445.5	802.5	2,077.6	1,587.6
Interest rate ⁽³⁾	7.875%	7.875%	7.875%	7.875%	7.875%	7.875%	-	-

⁽¹⁾ Converted at the exchange rate as of December 31, 2010: Ps. 3.976 = US\$1.00.

⁽²⁾ Based on the quoted market prices of our new notes.

⁽³⁾ Interest rate based on the prices settled in the contract as of December 31, 2010.

⁽⁴⁾ For a more detailed description, see “Item 10. Additional Information – C. Material contracts – New Debt Obligations” included elsewhere herein.

See “Item 5. Operating and Financial Review and Prospects—B. Liquidity and Capital Resources—Currency and Exchange Rates” and “Item 5. Operating and Financial Review and Prospects—B. Liquidity and Capital Resources—Derivative Financial Instruments” for more information.

Commodity price risk

In the liquids production and commercialization segment we are exposed to market risk in relation to price volatility of the LPG and natural gasoline since they are subject to international prices (Mont Belvieu for the LPG and NWE ARA for the natural gasoline). Their prices have fluctuated in response to changing market forces. Based on our volume sales of 2010, a US\$50 per ton change in the weighted-average sale prices of LPG and natural gasoline would have approximately a Ps. 18 million annual net income effect, if international reference prices of LPG and natural gasoline are lower than US\$663 and US\$1,094, respectively. If they are higher, there would be no effect as the variable export tax regime neutralizes any change in the prices of such products. See “Item 8. Financial Information—A. Consolidated Statements and Other Financial Information—Exports” for more information.

The price at which we sell ethane under our agreement with PBB is subject to adjustment based on various factors including the PPI, the natural gas price, the quality of the ethane shipped by us and the transportation tariffs and charges. We do not consider them as a significant commodity price risk.

For any given period, the liquids sales will be dependent on the international price of LPG and natural gasoline, taxes and other government take impacts and production volumes. Accordingly, changes in international prices for the mentioned products only provide a broad indicator of changes in the net income of any fiscal year.

Item 12. Description of Securities Other Than Equity Securities

American Depositary Shares

Fees and charges payable by a holder of ADSs

Our ADSs are listed on the NYSE under the symbol “TGS”. The Bank of New York Mellon is the depositary issuing ADSs pursuant to our deposit agreement (the “**Depositary**”). Each ADS represents the right to receive one share.

The Depositary collects its fees for delivery and surrender of ADSs directly from investors depositing shares or surrendering ADSs for the purpose of withdrawal or from intermediaries acting for them. The Depositary collects fees for making distributions to investors by deducting those fees from the amounts distributed or by selling a portion of distributable property to pay the fees. The Depositary may collect its annual fee for depositary services by deductions from cash distributions or by directly billing investors or by charging

the book-entry system accounts of participants acting for them. The Depositary may generally refuse to provide fee-attracting services until its fees for those services are paid.

The charges of the Depositary payable by investors are as follows:

Persons depositing or withdrawing shares must pay:	For:
US\$ 5.00 (or less) per 100 ADSs (or portion of 100 ADSs)	Issuance of ADSs, including issuances resulting from a distribution of shares or rights or other property
US\$ 0.02 (or less) per ADS	Cancellation of ADSs for the purpose of withdrawal, including if the depositary agreement terminates
	Any cash distribution to ADS registered holders
A fee equivalent to the fee that would be payable if securities distributed to you had been shares and the shares had been deposited for issuance of ADSs	Distribution of securities distributed to holders of deposited securities which are distributed by the Depositary to ADS registered holders
US\$ 0.02 (or less) per ADSs per calendar year	Depositary services
Registration or transfer fees	Transfer and registration of shares on our share register to or from the name of the Depositary or its agent when you deposit or withdraw shares
Expenses of the Depositary	Cable, telex and facsimile transmissions (as provided in the depositary agreement)
	Converting foreign currency to US dollars
Taxes and other governmental charges the Depositary or the custodian have to pay on any ADS or share underlying an ADS, for example, stock transfer taxes, stamp duty or withholding taxes	As necessary
Any charges incurred by the Depositary or its agents for servicing the deposited securities	As necessary

Disclosure for Fees Incurred in Past Annual Period From January 1, 2010 to June 16, 2011, we received from the Depositary US\$110,000 for the expenses incurred by us related to the administration and maintenance of the ADS program and investor relation activities.

Disclosure for Fees to be Paid in the Future. The Depositary, has agreed to reimburse us for expenses incurred by us related to the administration and maintenance of the ADS program and investor relation activities. In certain instances, the Depositary has agreed to provide additional payments to us based on any applicable performance indicators relating to the ADR facility. There are limits on the amount of expenses for which the Depositary will reimburse us, but the amount of reimbursement available to us is not necessarily tied to the amount of fees the depositary collects from investors.

Part II

Item 13. Defaults, Dividend Arrearages and Delinquencies

No events required to be reported have occurred that materially affect the Company.

Item 14. Material Modifications to the Rights of Security Holders and Use of Proceeds

None.

Item 15. Controls and Procedures.

A. Disclosure controls and procedures

We carried out an evaluation under the supervision and with the participation of our management, including our chief executive officer and chief financial officer, of the effectiveness of the design and operation of our disclosure controls and procedures, as defined under Rules 13a-15(e) and 15d-15(e) under the Exchange Act as of December 31, 2010. There are inherent limitations to the effectiveness of any system of disclosure controls and procedures, including the possibility of human error and the circumvention or overriding of the controls and procedures. Accordingly, even effective disclosure controls and procedures can only provide reasonable assurance of achieving their control objectives. Based upon our evaluation, our CEO and CFO concluded that our disclosure controls and procedures were effective to provide reasonable assurance that information required to be disclosed by us in the reports that we file or submit under the Exchange Act is recorded, processed, summarized and reported within the time periods specified in the applicable rules and forms, and that it is accumulated and communicated to our management, including our CEO and CFO, as appropriate, to allow timely decisions regarding required disclosure.

B. Management's annual report on internal control over financial reporting

Our management, including our CEO and CFO, is responsible for establishing and maintaining adequate internal control over financial reporting as defined in Rules 13a-15(f) and 15d-15(f) under the Exchange Act. Our internal control over financial reporting is a process designed to provide reasonable assurance regarding the reliability of financial reporting and the preparation of Financial Statements for external purposes in accordance with applicable generally accepted accounting principles.

Management assessed the effectiveness of our internal control over financial reporting as of December 31, 2010. In making this assessment, management used the criteria set forth by the Committee of Sponsoring Organizations of the Treadway Commission ("COSO"). Based on this assessment, management concluded that, as of the end of fiscal year 2010, our internal control over the financial reporting was effective.

C. Attestation Report of the Registered Public Accounting Firm

The effectiveness of our internal control over financial reporting as of December 31, 2010 has been audited by KPMG, an independent registered public accounting firm, as stated in their report which appears on page F-1 herein.

D. Changes in Internal Control Over Financial Reporting

There have not been any changes in our internal control over financial reporting during 2010 that have materially affected, or are reasonably likely to materially affect, our internal control over financial reporting.

Item 16 [Reserved]

Item 16A. Audit Committee Financial Expert

We have at least one audit committee financial expert serving on our audit committee. Our Board of Directors has identified Mr. Carlos Olivieri as an audit committee financial expert. Mr. Olivieri is an independent director within the meaning of Rule 10A-3 under the Exchange Act.

Item 16B. Code of Ethics

We have adopted a Code of Conduct, applicable to all employees including our principal executive, accounting and financial officers. Our Code of Conduct is available both on our web site at <http://www.tgs.com.ar/gobierno-corporativo/codigo-de-conducta> and as an Exhibit to this Annual Report. For more information see, "Item 16G. Corporate Governance.

Item 16C. Principal Accountant Fees and Services

Audit and Non-Audit Fees

Fees billed for professional services provided to us by KPMG during the years ended December 31, 2010 and 2009 in each of the following categories are:

	Year ended December 31,	
	2010	2009
	(in thousands of pesos)	
Audit fees	1,482.7	1,239.5
Audit-related fees	-	-
Tax Fees	-	-
All other fees	-	-
Total fees	<u>1,482.7</u>	<u>1,239.5</u>

Audit fees. Audit fees in the above table are mainly for the audit of our annual Financial Statements and the review of our quarterly reports and Form 20-F.

Audit Committee Pre-Approval Policies and Procedures

Consistent with SEC requirements regarding auditor independence, the Audit Committee has adopted a policy of pre-approving services prior to commencement of the specified service. Under the policy before the accountant is engaged to render audit or non-audit services, the engagement must be approved by the Audit Committee and the Audit Committee must pre-approve the provision of services by our principal auditor prior to commencement of the specified service. The requests for pre-approval are submitted to the Audit Committee by our CFO, or a designate, and the Audit Committee Chairman executes engagement letters from the principal auditor following approval by committee members.

All audit-related fees, other fees and tax fees, if any, are submitted to our audit committee for prior approval. The Audit Committee has delivered its policy to the Board of Directors that sets forth its procedures for evaluating, in each case, the scope of the work to be performed by our accountants and the fees for such work prior to their engagement.

Consequently, 100% of the fees rendered by our principal accountants in 2010 were approved by the Audit Committee prior to their engagement to perform such work.

Item 16D. Exemptions from the Listing Standards for Audit Committees

Not applicable.

Item 16E. Purchases of Registered Equity Securities of the Issuer by the Issuer and Affiliated Purchasers

Not applicable.

Item 16F. Change in Registrant's Certifying Account

Not Applicable.

Item 16G. Corporate Governance

Our corporate governance practices are governed by:

- applicable Argentine law (particularly, the Commercial Companies Law),
- Decree No. 677/01,
- the standards of the CNV,
- our By-laws,
- our Code of Conduct and other internal control policies and procedures, and
- certain rules of the NYSE applicable to listed foreign private issuers.

We have securities that are registered with the SEC and listed on the NYSE and, consequently, we are subject to the rules and regulations of the NYSE.

Under the Corporate Governance Standards issued by the NYSE in section 303A of its Listed Company Manual- ("NYSE Standards"), non-U.S. companies are permitted, in general, to follow their home country corporate governance practices in lieu of the provisions included in such Section. However, non-U.S. companies must comply with sections 303A.06, 303A.11 and 303A.12(b) and (c).

Our Corporate Governance Guidelines are available on our website www.tgs.com.ar

According to the Section 303A.11 of the NYSE Standards, foreign private issuers must disclose any significant ways in which their corporate governance practices differ from those followed by US issuers. Accordingly, the following list reflects such differences:

Directors

According to NYSE Standards, listed companies must have a majority of independent directors. Argentine law does not require a majority of independent directors, but does require at least two independent directors on the Audit Committee. At our last Annual Shareholder's Meeting, three independent directors (meeting the independence criteria set forth in the NYSE Standards) were appointed to the Audit Committee. We also have two alternate directors who qualify as independent.

Meeting of Non- Management Directors

According to NYSE requirements, the non-management directors must meet at regularly scheduled executive sessions without management. None of Argentine law, the CNV rules or our By-laws requires that any such meetings be held. Under Argentine Law, a Board of Directors must meet at least once every three months.

Nominating/Corporate Governance Committee

US listed companies must have a nominating/corporate governance committee composed entirely of independent directors. Argentine law and regulations do not require this committee.

Compensation Committee

US listed companies must have a compensation committee composed entirely of independent directors. Argentine law and regulations do not require this committee. However, our Audit Committee is required to give an opinion about the reasonableness of directors' and executive officers' compensation and stock option plans (if applicable), as proposed by our Board of Directors, and the fee paid to members of our Board of Directors is approved by our Shareholders at their annual meeting.

Audit Committee

Listed Companies must have an audit committee consisting of a minimum of three independent members. The members of the Audit Committee must be financially literate or must acquire such financial knowledge within a reasonable period and at least one of its members shall have expertise in accounting or financial management. Also, if a member of the Audit Committee is simultaneously a member of the Audit Committee of more than three public companies, and the listed company does not limit the number of Audit Committees on which its members may serve, then, in each case the Board of Directors shall determine whether the simultaneous service would prevent such members from effectively serving on the listed company's Audit Committee, and shall disclose its decision in the annual proxy statement of the company or in the company's annual report on Form 10-K, which is filed with the SEC.

Argentine law requires an Audit Committee to be comprised of at least three members. Pursuant to CNV standards, Audit Committee members are required to have knowledge in business, financial or accounting matters and issues. In addition, CNV standards require the training of Audit Committee's members in the practice areas that would permit them to carry out their duties on the Audit Committee. Our Audit Committee is made of three independent members. One of them qualifies as a "financial expert" within the meaning of Item 16A of the Form 20-F. See "Item 16A. Audit Committee Financial Expert." The Committee's functions and duties are similar to those required by the NYSE. Furthermore, Argentine Law does not limit the number of audit committees on which a member of its Audit Committee may serve.

Code of Business Conduct and Ethic

According to Section 303 A10 of NYSE Standards, listed companies must adopt and disclose a code of business conduct and ethics for directors, officers and employees, and promptly disclose any waivers of the code for directors or executive officers. In October 2005, our Board of Directors approved a "Code of Conduct" with the purpose of introducing SEC rules applicable to foreign registrants. Such code applies to all Board of Directors' members, Audit Committee members, Senior Management, and employees, with no exceptions. Our Code of Conduct is available to the public on our website and as an Exhibit to this Annual Report.

CEO's Certification

Each listed Company CEO must annually certify to the NYSE each year that he or she is not aware of any violation by the company of the NYSE's corporate governance listing standards. There is no such requirement under Argentine Law.

Part III

Item 17. Financial Statements

The registrant has responded to Item 18 in lieu of responding to this Item.

Item 18. Financial Statements

The following Financial Statements are filed as part of this Form 20-F:

Transportadora de Gas del Sur S.A.--

	<u>Page</u>
Report of independent registered public accounting firm	F-1
Consolidated Statements of Income for the years ended December 31, 2010, 2009 and 2008	F-4

CERTIFICATION

I, Carlos Seijo, certify that:

1. I have reviewed this annual report on Form 20-F of Transportadora de Gas del Sur S.A.;
2. Based on my knowledge, this annual report does not contain any untrue statement of a material fact or omit to state a material fact necessary to make the statements made, in light of the circumstances under which such statements were made, not misleading with respect to the period covered by this annual report;
3. Based on my knowledge, the Financial Statements, and other financial information included in this annual report, fairly present in all material respects the financial condition, results of operations and cash flows of the Company as of, and for, the periods presented in this annual report;
4. The Company's other certifying officers and I are responsible for establishing and maintaining disclosure controls and procedures (as defined in Exchange Act Rules 13a-15(e) and 15d-15(e)) and internal control over financial reporting (as defined in Exchange Act Rules 13a-15(f) and 15d-15(f)), for the Company and have:
 - a) Designed such disclosure controls and procedures, or caused such disclosure controls and procedures to be designed under our supervision, to ensure that material information relating to the Company, including its consolidated subsidiaries, is made known to us by others within those entities, particularly during the period in which this report is being prepared;
 - b) Designed such internal control over financial reporting, or caused such internal control over financial reporting to be designed under our supervision, to provide reasonable assurance regarding the reliability of financial reporting and the preparation of Financial Statements for external purposes in accordance with generally accepted accounting principles;
 - c) Evaluated the effectiveness of the registrant's disclosure controls and procedures and presented in this report our conclusions about the effectiveness of the disclosure controls and procedures, as of the end of the period covered by this report based on such evaluation; and
 - d) Disclosed in this report any change in the company's internal control over financial reporting that occurred during the period covered by the annual report that has materially affected, or is reasonably likely to materially affect, the company's internal control over financial reporting; and
5. The Company's other certifying officers and I have disclosed, based on our most recent evaluation of internal control over financial reporting, to the Company's auditors and the audit committee of Company's board of directors (or persons performing the equivalent function):
 - a) All significant deficiencies and material weaknesses in the design or operation of internal controls over financial reporting which are reasonably likely to adversely affect the Company's ability to record, process, summarize and report financial information; and
 - b) Any fraud, whether or not material, that involves management or other employees who have a significant role in the Company's internal control over financial reporting.

Report of Independent Registered Public Accounting Firm

The Board of Directors and Stockholders
Transportadora de Gas del Sur S.A.:

- 1 We have audited Transportadora de Gas del Sur S.A.'s internal control over financial reporting as of December 31, 2010, based on the criteria established in "Internal Control - Integrated Framework" issued by the Committee of Sponsoring Organizations of the Treadway Commission (COSO). The management of Transportadora de Gas del Sur S.A. is responsible for maintaining effective internal control over financial reporting and for its assessment of the effectiveness of internal control over financial reporting. Our responsibility is to express an opinion on Transportadora de Gas del Sur S.A.'s internal control over financial reporting based on our audit.
- 2 We conducted our audit in accordance with the standards of the Public Company Accounting Oversight Board (United States). Those standards require that we plan and perform the audit to obtain reasonable assurance about whether effective internal control over financial reporting was maintained in all material respects. Our audit included obtaining an understanding of internal control over financial reporting, assessing the risk that a material weakness exists, and testing and evaluating the design and operating effectiveness of internal control based on the assessed risk. Our audit also included performing such other procedures as we considered necessary in the circumstances. We believe that our audit provides a reasonable basis for our opinion.
- 3 A company's internal control over financial reporting is a process designed to provide reasonable assurance regarding the reliability of financial reporting and the preparation of financial statements for external purposes in accordance with generally accepted accounting principles. A company's internal control over financial reporting includes those policies and procedures that (1) pertain to the maintenance of records that, in reasonable detail, accurately and fairly reflect the transactions and dispositions of the assets of the company; (2) provide reasonable assurance that transactions are recorded as necessary to permit preparation of financial statements in accordance with generally accepted accounting principles, and that receipts and expenditures of the company are being made only in accordance with authorizations of management and directors of the company; and (3) provide reasonable assurance regarding prevention or timely detection of unauthorized acquisition, use, or disposition of the company's assets that could have a material effect on the financial statements.
- 4 Because of its inherent limitations, internal control over financial reporting may not prevent or detect misstatements. Also, projections of any evaluation of effectiveness to future periods are subject to the risk that controls may become inadequate because of changes in conditions, or that the degree of compliance with the policies or procedures may deteriorate.
- 5 In our opinion, Transportadora de Gas del Sur S.A. maintained, in all material respects, effective internal control over financial reporting as of December 31, 2010, based on the criteria established in "Internal Control - Integrated Framework" issued by the COSO.

- 6 We also have audited, in accordance with the standards of the Public Company Accounting Oversight Board (United States), the consolidated balance sheets of Transportadora de Gas del Sur S.A. and its subsidiary as of December 31, 2010 and 2009, and the related consolidated statements of income, changes in shareholders' equity and cash flows for each of the years in the three-year period ended December 31, 2010, and our report dated June 16, 2011 expressed an unqualified opinion on those consolidated financial statements.

Report of Independent Registered Public Accounting Firm

The Board of Directors and Stockholders
Transportadora de Gas del Sur S.A.:

- 1 We have audited the accompanying consolidated balance sheets of Transportadora de Gas del Sur S.A. and its subsidiary as of December 31, 2010 and 2009, and the related consolidated statements of income, changes in shareholders' equity and cash flows for each of the years in the three-year period ended December 31, 2010. These consolidated financial statements are the responsibility of the Company's management. Our responsibility is to express an opinion on these consolidated financial statements based on our audits.
- 2 We conducted our audits in accordance with the standards of the Public Company Accounting Oversight Board (United States). Those standards require that we plan and perform the audit to obtain reasonable assurance about whether the financial statements are free of material misstatement. An audit includes examining, on a test basis, evidence supporting the amounts and disclosures in the financial statements. An audit also includes assessing the accounting principles used and significant estimates made by management, as well as evaluating the overall financial statement presentation. We believe that our audits provide a reasonable basis for our opinion.
- 3 In our opinion, the consolidated financial statements referred to above present fairly, in all material respects, the financial position of Transportadora de Gas del Sur S.A. and its subsidiary as of December 31, 2010 and 2009, and the results of their operations and their cash flows for each of the years in the three-year period ended December 31, 2010, in conformity with accounting principles generally accepted in Argentina, as approved by the Professional Council of Economic Sciences of the City of Buenos Aires.
- 4 Accounting principles generally accepted in Argentina, as approved by the Professional Council of Economic Sciences of the City of Buenos Aires, vary in certain significant respects from accounting principles generally accepted in the United States. Information relating to the nature and effect of such differences is presented in Note 12 to the consolidated financial statements.
- 5 We also have audited, in accordance with the standards of the Public Company Accounting Oversight Board (United States), Transportadora de Gas del Sur S.A.'s internal control over financial reporting as of December 31, 2010, based on the criteria established in Internal Control -Integrated Framework issued by the Committee of Sponsoring Organizations of the Treadway Commission (COSO), and our report dated June 16, 2011 expressed an unqualified opinion on the effectiveness of the Company's internal control over financial reporting.

The accompanying notes are an integral part of these consolidated financial statements.

TRANSPORTADORA DE GAS DEL SUR S.A.

NOTES TO THE CONSOLIDATED FINANCIAL STATEMENTS FOR THE YEARS ENDED DECEMBER 31, 2010, 2009 AND 2008

(Amounts stated in thousands of Argentine pesos as described in Note 2.b.,
except for per share and per ADS amounts in Argentine pesos or unless otherwise indicated)

1. BUSINESS DESCRIPTION

Transportadora de Gas del Sur S.A. (“the Company” or “TGS”) is one of the companies created as a result of the privatization of Gas del Estado S.E. (“GdE”). The Company commenced operations on December 29, 1992 and it is engaged in the transportation of natural gas and production and commercialization of natural gas liquids (“liquids”). TGS’s pipeline system connects major gas fields in southern and western Argentina with gas distributors and industries in those areas and in the greater Buenos Aires area. The gas transportation license to operate this system for a period of thirty-five years (“the License”) was exclusively granted to the Company. TGS is entitled to a one-time extension of ten years provided that it has essentially met the obligations imposed by the License and by the Ente Nacional Regulador del Gas (National Gas Regulatory Body or “ENARGAS”). The General Cerri Gas Processing Complex (the “Cerri Complex”), where the Company processes natural gas by extracting liquids, was transferred from GdE along with the gas transmission assets. The Company also renders midstream services, which mainly consist of gas treatment, removal of impurities from the natural gas stream, gas compression, wellhead gas gathering and pipeline construction, operation, and maintenance services.

2. BASIS OF PRESENTATION AND SUMMARY OF SIGNIFICANT ACCOUNTING POLICIES

The Company’s consolidated financial statements have been prepared in accordance with generally accepted accounting principles in Argentina (“Argentine GAAP”) as approved by Professional Council in Economic Sciences of the Autonomous City of Buenos Aires (“CPCECABA”), and the regulations of the *Comisión Nacional de Valores* (the Argentine National Securities Commission or “CNV”) and ENARGAS. Argentine GAAP differ in certain significant respects from generally accepted accounting principles in the United States of America (“US GAAP”). Such differences involve methods of measuring the amounts shown in the financial statements, as well as additional disclosures required by US GAAP and Regulation S-X of the Securities and Exchange Commission (“SEC”). A description of the significant differences between Argentine GAAP and US GAAP as they relate to the Company is set forth in Note 12 to these consolidated financial statements.

In accordance with Argentine GAAP, the presentation of the parent company’s individual financial statements is mandatory. Consolidated financial statements are to be included as supplementary information to the individual financial statements. For the purpose of these financial statements, individual financial statements have been omitted since they are not required for SEC reporting purposes.

The consolidated financial statements include the accounts of TGS and its subsidiary Telcosur S.A. (“Telcosur”) over which it has effective control. Investments in companies, in which the Company exercises significant influence, but not control, are accounted for under the equity method. The Company followed the methodology established in Technical Resolution (“TR”) No. 21 “Equity Method of Accounting, Consolidation of Financial Statements and Related Party Transactions” of the Argentine Federation of Professional Councils in Economic Sciences (“Argentine Federation”) and approved by the CPCECABA. The accounting policies followed by Telcosur in the preparation of its financial information are consistent with those applied by TGS. All significant intercompany transactions have been eliminated in consolidation.

Detailed data reflecting subsidiary direct control as of December 31, 2010, 2009 and 2008 is as follows:

Company	% of shareholding and votes			Closing date	Legal address
	2010	2009	2008		
TELCOSUR S.A.	99.98%	99.98%	99.98%	December 31,	Don Bosco 3672, 6 th Floor Autonomous City of Buenos Aires

Certain reclassifications of prior year information have been made to conform to the current year presentation.

TRANSPORTADORA DE GAS DEL SUR S.A.

NOTES TO THE CONSOLIDATED FINANCIAL STATEMENTS FOR THE YEARS ENDED DECEMBER 31, 2010, 2009 AND 2008

(Amounts stated in thousands of Argentine pesos as described in Note 2.b.,
except for per share and per ADS amounts in Argentine pesos or unless otherwise indicated)

a) Use of estimates

The preparation of the consolidated financial statements in conformity with generally accepted accounting principles requires management to make accounting estimates and assumptions that affect the reported amounts of assets and liabilities and the disclosure of contingent assets and liabilities at the date of the consolidated financial statements, as well as the reported amounts of revenues and expenses during the reporting fiscal year. Estimates are used when accounting for the allowance for doubtful accounts, depreciation, amortization, income taxes, allowance for contingencies, impairment of long-lived assets, and present value of long term receivables and liabilities. Actual results could be significantly different from such estimates.

b) Presentation of consolidated financial statements in constant Argentine pesos

The consolidated financial statements have been prepared in constant Argentine pesos, recognizing the overall effects of inflation up to August 31, 1995. As from that date, in line with professional accounting standards and the requirements of the control authorities, the Company discontinued the restatement of its consolidated financial statements until December 31, 2001.

As established by Resolution No. 3/2002 of the CPCECABA and Resolution No. 415 of the CNV, as from January 1, 2002, the Company resumed the recognition of the effects of inflation in these consolidated financial statements, following the provisions of TR No. 6, as amended by TR No. 19, both issued by the Argentine Federation. Accounting measurements restated due to the change in the purchasing power of the currency up to August 31, 1995, as well as those which have been originated between that date and December 31, 2001, are stated in the currency value as of the later date.

On March 25, 2003, the Executive Branch issued Decree No. 664, which provides that financial statements for periods ending after such date shall be stated in historical Argentine pesos. As a consequence and in accordance with Resolution No. 441, issued by the CNV, the Company suspended inflation accounting effective March 1, 2003. This criterion is not in line with Argentine GAAP, which stipulate that financial statements should be restated as of September 30, 2003. If the Company had applied inflation accounting for the period from March 1 to September 30, 2003, the non-recognized inflation effect on net income and shareholders' equity for the fiscal years ended December 31, 2010, 2009 and 2008 would not have been significant.

The restatement methodology is computed at each balance sheet date, using the Argentine Wholesale Price Index ("WPI") published by the *Instituto Nacional de Estadística y Censos* ("INDEC"), as follows:

- Non-monetary items and consolidated statement of income amounts are adjusted to reflect the then-current general purchasing power;
- Monetary items are not adjusted as such items are, by their nature, stated in terms of current general purchasing power in the financial statements; and
- Monetary gains or losses are recognized in the consolidated statement of income, reflecting the effect of holding monetary items. This gain or loss on exposure to inflation (monetary gain or loss) is included in the consolidated statement of income within "Net financial expenses".

Information presented for comparative purposes has been restated in constant currency as of February 28, 2003.

c) Short-term receivables and liabilities in currency

Short-term receivables and liabilities, including accrued interest if applicable at the end of each year have been valued at their respective nominal amount, which does not materially differ from the present value of the future cash flow that the receivables and liabilities will generate, using the internal rate of return estimated at inception.

TRANSPORTADORA DE GAS DEL SUR S.A.

NOTES TO THE CONSOLIDATED FINANCIAL STATEMENTS FOR THE YEARS ENDED DECEMBER 31, 2010, 2009 AND 2008

(Amounts stated in thousands of Argentine pesos as described in Note 2.b.,
except for per share and per ADS amounts in Argentine pesos or unless otherwise indicated)

d) Foreign currency assets and liabilities

Assets and liabilities denominated in foreign currencies, including accrued interest, if applicable, have been translated at the prevailing exchange rates at the end of each year. Detailed information is disclosed in Note 13.g).

Generally, foreign currency transaction gains and losses are included in the determination of net income.

However, CNV Resolution No. 398 provides, under certain circumstances, for the application of CPCECABA Resolution MD No. 3/02, issued in March 2002, which provides that foreign currency transaction gains or losses on or after January 6, 2002, related to liabilities in foreign currency as of such date may be allocated to the cost of assets acquired or constructed with such financing as long as a series of conditions and requirements established in such standard are complied with. However, in July 2003, the CPCECABA issued Resolution CD No. 87/03, which suspended such accounting treatment and therefore required foreign currency transaction gains and losses to be included in the determination of net income for the period as from July 29, 2003.

e) Inventories

Inventories consist of natural gas of TGS (in excess of line pack classified as property, plant and equipment) and third parties in the pipeline system, and liquids obtained from natural gas processing at the Cerri Complex. Inventories have been valued at replacement or reproduction cost, as applicable, at the end of each year. The carrying value of inventories does not exceed its net realizable value.

f) Current investments

Bank accounts and time deposits have been valued at their face values plus accrued interest, which do not materially differ from their discounted value using the internal rate of return effective at inception.

Mutual funds have been valued at their realizable value at year-end.

Unrealized gains and losses on time deposits and mutual funds are included in the “Net financial expenses”, in the consolidated statement of income.

g) Long-term receivables and liabilities in currency

Long-term receivables and liabilities have been valued based on the best estimate of the discounted value of the amounts expected to be collected or paid, as applicable, using the explicit interest rate used in the transaction.

Assets and liabilities generated as a result of the application of the deferred tax method have been stated at their nominal value.

Tax credits (income tax and value added tax, or “VAT”) recorded as a result of the reversal of the tariff increase (Note 7.a.) have been valued on the discounted value of the amounts expected to be collected using a market interest rate.

h) Non-current investments

Equity investments in companies in which the Company’s ownership interest ranges between 20% and 50% —Gas Link S.A. (“Link”), Transporte y Servicios de Gas en Uruguay S.A. (“TGU”) and Emprendimientos de Gas del Sur S.A. (“EGS”)— have been accounted for under the equity method based on their financial statements as of September 30, 2010 and 2009. These financial statements have been prepared applying similar accounting policies as those used by the Company to prepare its consolidated financial statements. As of December 31, 2010 and 2009, the investment in Link has been adjusted by Ps. 3,925 and Ps. 4,067, respectively, due to the elimination of intercompany profits.

TRANSPORTADORA DE GAS DEL SUR S.A.

NOTES TO THE CONSOLIDATED FINANCIAL STATEMENTS FOR THE YEARS ENDED DECEMBER 31, 2010, 2009 AND 2008

(Amounts stated in thousands of Argentine pesos as described in Note 2.b.,
except for per share and per ADS amounts in Argentine pesos or unless otherwise indicated)

The Company's management is not aware of any significant subsequent events which affected: (i) the financial statements as of September 30, 2010 of Link, from this date to December 31, 2010; and, (ii) the financial statements as of September 30, 2009 of Link, TGU and EGS from this date to December 31, 2009. The book value of the investment in EGS and TGU as of December 31, 2010 has been adjusted by Ps. 371 and Ps. 188, respectively, to reflect significant transactions and those made between EGS and the Company in the last three-month period ended on such date. Additionally, the book value of the investment in EGS and TGU as of December 31, 2009 included Ps. 212 and Ps. 109, respectively, corresponding to the transactions between EGS and the Company in the three-month period ended on such date.

The Company considers its foreign affiliate TGU to be a "non-integrated affiliate". Consequently, TGU's assets and liabilities have been translated into Argentine pesos using the exchange rate in effect at period / year-end, while its common stock and retained earnings accounts have been translated using historical exchange rates.

i) Property, plant and equipment, net

- Assets transferred from the privatization of GdE: The value of these assets was determined based on the price paid for the acquisition of 70% of the Company's common stock, which amounted to US\$ 561.2 million. This price was the basis to determine a total value of common stock of US\$ 801.7 million, which, when added to the debt assumed under the Company's privatization agreement (the "Transfer Agreement") of US\$ 395.0 million, resulted in a total value for property, plant and equipment of US\$ 1,196.7 million. Such value, converted at the exchange rate in effect as of the date of the Transfer Contract, has been restated for the effects of inflation as described in Note 2.b).
- Line pack: Line pack represents the natural gas in the transportation system that is necessary to keep the system at operating capacity, and is valued at acquisition cost and restated for the effects of inflation as described in Note 2.b).
- Capitalization of foreign exchange loss: Resolutions No. 3/2002 and No. 87/03 issued by the CPCECABA and Resolution No. 398 of the CNV established that exchange losses arising from the devaluation of the peso from January 6, 2002 to July 28, 2003, to the extent that they were related to foreign currency liabilities existing at the first date, may be added to the cost basis of assets acquired or constructed with direct financing by such foreign currency liabilities. Similar accounting treatment is permitted, but not required, for foreign exchange losses arising from indirect financing. It was assumed that the proceeds from such financings were used, firstly, to cover working capital requirements and, secondly, to finance the acquisition or construction of assets that do not qualify for capitalization. The remainder was assumed to relate to assets for which capitalization is permitted.
- Additions: Additions have been valued at acquisition cost restated for the effects of inflation as described in Note 2.b). The Company has capitalized all the investments stipulated as mandatory in the License during the first five-year period, in order to achieve system integrity and public safety equal to those required by international standards. Such investments included, among others, the costs of survey programs related to internal and external pipeline inspection, cathodic protection and pipeline replacement and recoating. Additionally, Resolutions No. 1,660 and No. 1,903 issued by ENARGAS include definitions prescribing which costs should be considered improvements and which costs should be considered maintenance expenses. Repair and maintenance costs have been expensed as incurred.
- Depreciation: Accumulated depreciation related to natural gas transportation assets is computed under the straight-line method over the estimated useful lives of the specific assets, provided they are lower than the maximum useful lives established by the ENARGAS through Resolutions No. 1,660 and No. 1,903.

For depreciation of all other property, plant and equipment, the Company uses the straight-line method of depreciation and applies the annual depreciation rates disclosed in Note 13.a).

TRANSPORTADORA DE GAS DEL SUR S.A.

NOTES TO THE CONSOLIDATED FINANCIAL STATEMENTS
FOR THE YEARS ENDED DECEMBER 31, 2010, 2009 AND 2008

(Amounts stated in thousands of Argentine pesos as described in Note 2.b.,
except for per share and per ADS amounts in Argentine pesos or unless otherwise indicated)

When assets are retired or otherwise disposed of, the cost and related accumulated depreciation are removed from the accounts, and any resulting gain or loss is reflected in the statement of income.

Capitalized foreign exchange loss is depreciated over the average remaining useful lives of the assets that led to such capitalization.

- Financial charges capitalization: The Company capitalizes financial expenses on long term construction projects. Financial expenses capitalized was Ps. 10,645 and Ps. 7,794 for the years ended December 31, 2010 and 2009, respectively.

The Company periodically evaluates the carrying value of these assets for impairment, by comparing the carrying value of the assets with its fair value which is calculated based on the projected cash flow discounted at a rate commensurate with the risk involved. If the carrying value of the assets is higher than its fair value, a loss would be recognized based on the amount by which the carrying value exceeds fair value.

Based on the estimates made as discussed in Note 2.a), which include among others assumptions used to determine the development of the US dollar exchange rate, of the inflation and interests rates as well as of the outcome of the renegotiation of the tariffs increase mentioned in note 7.a), the Company's management believes that the recorded value of property, plant and equipment does not exceed its fair value. However, it is reasonably possible that the Company's conclusion that these assets are not impaired could change should the assumptions develop different than expected by management.

j) Intangible assets

Intangible assets have been valued at their historical cost less accumulated amortization.

Debt issuance costs are being amortized over the term of the notes issued on May 14, 2007 (Note 6).

The expenses related to the creation of the Global Program 2007 are being amortized over a 5-year period.

k) Income tax

The Company and its subsidiary file separate standalone income tax returns under the Argentine tax laws.

The Company and its subsidiary record income taxes using the deferred tax method. Deferred tax assets and liabilities are recognized for the future tax consequences attributable to differences between the financial statement carrying amounts of existing assets and liabilities and their respective tax bases. Argentine GAAP requires companies to record a valuation allowance for that component of deferred tax assets which are not recoverable. The statutory income tax rate was 35% for all the periods presented.

The reconciliation between the income tax computed for tax purposes and the income tax expense charged to the statement of income is as follows:

	2010	2009	2008
Estimated current income tax expenses	154,180	152,408	146,229
Deferred income tax benefit	(15,562)	(9,076)	(2,840)
Income tax to be recovered ⁽¹⁾	(38,776)	-	-
Income tax loss carryforward	(653)	-	-
Income tax expense	99,189	143,332	143,389

⁽¹⁾ Corresponds to the reversal of the revenue provision recorded in 2009 in respect of the tariff increase (see Note 7.a.)

TRANSPORTADORA DE GAS DEL SUR S.A.

**NOTES TO THE CONSOLIDATED FINANCIAL STATEMENTS
FOR THE YEARS ENDED DECEMBER 31, 2010, 2009 AND 2008**

(Amounts stated in thousands of Argentine pesos as described in Note 2.b.,
except for per share and per ADS amounts in Argentine pesos or unless otherwise indicated)

The components of the net deferred tax liability as of December 31, 2010 and 2009, are the following:

	2010	2009
<i>Deferred tax assets</i>		
Allowance for doubtful accounts	9,538	1,849
Tax credits discounted value	6,069	-
Other provisions	2,343	2,343
Provision for contingencies	38,190	31,085
Labor provisions	-	6,042
Income tax loss carryforward	653	-
Total gross deferred tax assets	56,793	41,319
<i>Deferred tax liabilities</i>		
Deferred revenues	461	550
Current investments	983	6,047
Intangible assets	1,523	1,962
Property, plant and equipment, net	83,004	78,153
Total gross deferred tax liabilities	85,971	86,712
Net deferred tax liability (Notes 4.d and 4.i) (1)	(29,178)	(45,393)

⁽¹⁾ Net of deferred tax asset of Ps. 733 and Ps. 196 recorded under "Other non-current receivables" as of December 31, 2010 and 2009, respectively.

Income tax expense computed at the statutory tax rate on pre-tax income differs from the income tax expense for the years ended December 31, 2010, 2009 and 2008 as follows:

	2010	2009	2008
Pre-tax income	201,425	321,712	318,480
Statutory income tax rate	35%	35%	35%
Income tax expense at statutory income tax rate	70,499	112,599	111,468
Permanent differences at statutory income tax rate			
- Inflation adjustment	31,134	31,420	31,550
- Non-taxable income and non-deductible expenses	(368)	103	(557)
- Others	(2,076)	(790)	928
Income tax expense	99,189	143,332	143,389

In assessing the recoverability of deferred tax assets, management considers whether it is more likely than not that some portion or all of the deferred tax assets will not be realized. The ultimate realization of deferred tax assets is dependent upon the generation of future taxable income during the periods in which those temporary differences become recoverable. Management considers the scheduled reversal of deferred tax liabilities, projected future taxable income and tax planning in making these assessments. The Company is required to continuously evaluate the recoverability of deferred tax assets. This evaluation is based on internal estimates made as discussed in Note 2.a), which are routinely updated to reflect more recent trends in the Company's results of operations.

Within the framework of Resolution No. 312/05 from the FACPCE, the net book value of the inflation adjustment included in the accounting value of the property, plant and equipment is a temporary difference and thus, the deferred tax liability is required to be recorded. However, said resolution permits companies to disclose the deferred tax liability in the notes to the financial statements instead of recording it. TGS has elected to disclose the deferred tax liability in notes to the consolidated financial statements. This deferred tax liability does not constitute an account payable, but it is a liability that will be reversed over the remaining period over which these assets are depreciated. In compliance with Resolution No. 487 of the CNV, TGS advises that, if that liability had been recognized, the deferred tax liability as of December 31, 2010, would have increased by Ps. 594,207 (generating a net liability position of Ps. 623,385) and a positive effect of Ps. 31,088, Ps. 31,594 and Ps. 31,155 on the Company's net income for the years ended December 31, 2010, 2009 and 2008, respectively, would have been recognized. Additionally, in the subsequent years, TGS would have recorded a lower income tax expenses as follows:

TRANSPORTADORA DE GAS DEL SUR S.A.

**NOTES TO THE CONSOLIDATED FINANCIAL STATEMENTS
FOR THE YEARS ENDED DECEMBER 31, 2010, 2009 AND 2008**

(Amounts stated in thousands of Argentine pesos as described in Note 2.b.,
except for per share and per ADS amounts in Argentine pesos or unless otherwise indicated)

	Amount
Year 2011	30,344
Year 2012	30,067
Year 2013	29,303
Year 2014	28,922
Year 2015	28,826
Year 2016 onwards	446,745
Total	594,207

l) Asset tax

The Company and its subsidiary are subject to the Asset Tax Law (*"Impuesto a la Ganancia Mínima Presunta"*). The asset tax is calculated on an individual entity basis at the statutory tax rate of 1%, and is based upon the taxable assets of each Argentine entity as of the end of the year. This tax is complementary to income tax and the Company is required to pay the greater of the income tax or the asset tax. Any excess of the asset tax over the income tax may be carried forward and recognized as a payment on account of any excess of income tax over asset tax occurring within the subsequent ten years.

As of December 31, 2010 and 2009, the Company has not recorded any provision in respect of the asset tax because the determined amounts do not exceed what has been estimated for the income tax.

m) Advances in kind from customers

The advances in kind from customers have been valued at their respective nominal amount considering that this value is higher than the cost of rendering the gas transportation services that will cancel said advances.

n) Allowances and provisions for contingencies

The Company provides for losses relating to its accounts receivable. The allowance for losses is based on management's evaluation of various factors, including the credit risk of customers, historical trends and other information. While management uses the information available to make evaluations, future adjustments to the allowance may be necessary if future economic conditions differ substantially from the assumptions used in making the evaluations. Management has considered all events and/or transactions that are subject to reasonable and normal methods of estimation, and the consolidated financial statements reflect that consideration.

The Company has certain contingent liabilities with respect to existing claims, lawsuits and other proceedings, including those involving legal and regulatory matters. The Company records liabilities when it is probable that future costs will be incurred and such costs can be reasonably estimated. Such accruals are based on developments known by TGS at the date of the issuance of these consolidated financial statements, estimates of the outcome of these matters and the experience of its legal counsel in contesting, litigating and settling other matters. As the scope of the contingent liabilities become better defined, there will be changes in the estimates of future costs, which could have a material effect on the Company's future results of operations and financial condition or liquidity.

Contingencies and allowances are disclosed in Notes 9 and 13.e).

o) Shareholders' equity accounts

These accounts have been restated to account for the effects of inflation as described in Note 2.b), except for "Common stock" which is stated at nominal value. The adjustment derived from the restatement of such account has been disclosed under the line item "Inflation adjustment to common stock", in the Consolidated Statement of Changes in Shareholders' Equity.

TRANSPORTADORA DE GAS DEL SUR S.A.

**NOTES TO THE CONSOLIDATED FINANCIAL STATEMENTS
FOR THE YEARS ENDED DECEMBER 31, 2010, 2009 AND 2008**

(Amounts stated in thousands of Argentine pesos as described in Note 2.b.,
except for per share and per ADS amounts in Argentine pesos or unless otherwise indicated)

p) Revenue recognition

Firm transportation revenues are recognized based on the accrued contracted capacity reserved regardless of actual usage. For interruptible transportation services and certain production and commercialization of liquids contracts, revenues are recognized upon the delivery of natural gas or gas liquids to customers, respectively. For other production of liquids and other services contracts, revenues are recognized when services are rendered.

q) Statement of income accounts

Accounts relating to the statement of income have been registered as follows:

-Accounts that accumulate monetary transactions, at their nominal value.

-Expenses related to consumption of non-monetary assets have been charged to the statement of income taking into account the restated cost of such assets as described in Note 2.b).

- Gain / (loss) on related companies were determined on the basis of TGS' affiliates' results and were disclosed under "Gain / (loss) on related companies".

Other expenses, net, for the years ended December 31, 2010, 2009 and 2008, include the following items:

	2010	2009	2008
Net increase in allowances and provision for contingencies (Note 13.e.)	(21,396)	(25,607)	(17,458)
Revenue from firm transportation contract termination agreement	18,575	-	-
Others	2,817	(1,538)	1,834
Total	(4)	(27,145)	(15,624)

The breakdown of "Net financial expenses" line item for the years ended December 31, 2010, 2009 and 2008 is as follows:

	2010	2009	2008
<i>Generated by assets</i>			
Interest income	16,217	13,730	16,875
Foreign exchange gain	46,155	68,582	60,596
Tax receivables discounted value loss	(17,007)	-	-
Total	45,365	82,312	77,471
<i>Generated by liabilities</i>			
Interest expenses	(128,806)	(151,416)	(140,944)
Foreign exchange loss	(66,711)	(138,759)	(130,123)
Result of the debt prepayment	5,129	10,829	113,981
Other expenses and financial charges	(18,143)	(15,086)	(18,916)
Total	(208,531)	(294,432)	(176,002)
Total net financial expenses	(163,166)	(212,120)	(98,531)

r) Earnings and dividends per share and per American Depositary Shares ("ADS")

Earnings and dividends per share and per ADS for the years ended December 31, 2010, 2009 and 2008 have been calculated based on 794,495,283 outstanding shares during each year. One ADS represents five Class B shares. As

TRANSPORTADORA DE GAS DEL SUR S.A.

NOTES TO THE CONSOLIDATED FINANCIAL STATEMENTS FOR THE YEARS ENDED DECEMBER 31, 2010, 2009 AND 2008

(Amounts stated in thousands of Argentine pesos as described in Note 2.b.,
except for per share and per ADS amounts in Argentine pesos or unless otherwise indicated)

the Company does not have preferred stock or convertible debt, the amount of basic earnings per share is the same as the amount of diluted earnings per share.

s) New accounting rules

On December 29, 2009, CNV issued Resolution No. 562/09 which provides the application of TR No. 26 approved by the Argentine Federation. This TR establishes that certain Argentine companies which are subject to the Argentine Public Offering Regime (Law No. 17,811) will be required to adopt International Financial Reporting Standards (“IFRS”) issued by the International Accounting Standards Board (“IASB”). The application of such standards is effective for financial statements issued for the interim periods and fiscal year beginning January 1, 2012. The Company prepared an implementation plan for the adoption of said accounting rules under the regulations established by the Resolution No. 562/09 which was approved by the Board of Directors’ Meeting held on April 8, 2010. Moreover, the Company is evaluating the effects of the adoption of said accounting rules.

On July 1, 2010, the CNV issued Resolution No. 576/10, which extends Resolution No. 562/09, and, among others, establishes, that the recognition of the deferred tax liability caused by the inflation adjustment included in the accounting value of property, plant and equipment (which amount is disclosed in Note 2.k, in compliance with CNV Resolution No. 487) must be recorded with debit to Accumulated Retained Earnings in any interim period or fiscal year-end and until the end of the year immediately preceding the first interim period in which the IFRS will be applied. Consequently, TGS will recognize this liability in the fiscal year 2011. Moreover, said Resolution allows the Shareholders’ Meeting dealing with the approval of the financial statements in which said deferred tax liability was recognized to reallocate the debit to other accounts of the Shareholders’ Equity, which do not represent shares or reserved earnings.

3. CONSOLIDATED BUSINESS SEGMENT INFORMATION

Operating segments are defined under Argentine GAAP as components of an enterprise about which separate financial information is available that is evaluated regularly by the chief operating decision maker, or the decision-making group, in deciding how to allocate resources and in assessing performance. The Company’s decision-making group is the Executive Officer Committee.

For the years ended December 31, 2010, 2009 and 2008, the Company classifies its businesses into three segments: Natural Gas Transportation Services, Liquids Production and Commercialization and Other Services. The operating segments are reviewed separately because each operating segment represents a strategic business unit that generally offers different products, although interrelated, and/or serves different markets.

The Company manages its segments at the operating income / (loss) level of reporting.

The accounting policies of the operating segments are the same as those described in Note 2.

Assets and liabilities were allocated to each segment based on the specific identification of the assets and liabilities related to the specific business. Assets and liabilities that cannot be allocated to a specific segment were grouped under “Corporate” and include current investments and loans, among others.

As of and for the year ended December 31, 2010	Liquids			Corporate	Total
	Gas Transportation	Production and Commercialization	Other Services		
Net revenues	550,972	1,010,447	91,582	-	1,653,001

The Company renders services of gas transportation business principally to gas distribution companies and Petrobras Argentina. Significant customers in terms of net revenues from gas transportation for the years ended December 31, 2010, 2009 and 2008 are as follows:

	2010	2009 ⁽¹⁾	2008
MetroGAS S.A. ("MetroGAS")	183,492	180,911	180,532
Camuzzi Gas Pampeana S.A.	93,183	91,805	90,692
Gas Natural BAN S.A.	69,928	70,397	70,054
Petrobras Argentina (Note 10)	32,888	32,299	31,760
Camuzzi Gas del Sur S.A.	24,435	22,843	22,729

⁽¹⁾ Does not include the tariff increase ratified through Decree No. 1,918/09.

As of December 31, 2010, 2009 and 2008, significant customers in the production and commercialization of liquids segment were Petrobras International Finance Company ("PIFCo"), a subsidiary of Petróleo Brasileiro S.A. ("Petrobras"), PBB-Polisur S.A. ("Polisur") and Trafigura Beheer B.V. Amsterdam ("Trafigura"). Net revenues from these customers (include sales of liquids made on behalf of third parties, from which TGS withholds charges for the production and commercialization of liquids) for the years ended December 31, 2010, 2009 and 2008 are as follows:

	2010	2009	2008
PIFCo (Note 10)	490,166	544,968	752,957
Polisur	329,581	328,250	235,046
Trafigura	275,003	-	-

(Amounts stated in thousands of Argentine pesos as described in Note 2.b.,
except for per share and per ADS amounts in Argentine pesos or unless otherwise indicated)

5. SUPPLEMENTAL CASH FLOW INFORMATION

For purposes of the consolidated statement of cash flows, the Company considers all highly liquid temporary investments with an original maturity of three months or less at the time of purchase to be cash equivalents. The cash flow statement has been prepared using the indirect method, which requires a series of adjustments to reconcile net income for the year to net cash flows from operating activities.

The following table reconciles the balances included as cash and banks and current investments in the balance sheet to the total amounts of cash and cash equivalents at the beginning and end of the years ended December 31, 2010, 2009 and 2008:

	2010	2009	2008
Cash and banks	470,129	441,023	268,577
Current investments	619,351	584,119	336,113
Total cash and cash equivalent	1,089,480	1,025,142	604,690

Non-cash transactions are as follows:

	2010	2009	2008
Acquisition of property, plant and equipment through an increase in accounts payable	25,158	23,877	19,420
Financial charges capitalization	3,954	4,208	3,971

Cash flows resulting from operations include net financial expenses generated by cash and cash equivalents as of December 31, 2010, 2009 and 2008 for Ps. 36,783, Ps. 59,762 and Ps. 67,234, respectively.

6. LOANS

Short-term and long-term debt as of December 31, 2010 and 2009 comprise the following:

	2010	2009
Current loans:		
1999 EMTN Program: Series 2 notes ⁽¹⁾	97	114
Interests payable	14,564	14,869
Total current loans	14,661	14,983
Non-current loans:		
2007 EMTN Program: Series 1 notes	1,487,119	1,502,330
Total non-current loans	1,487,119	1,502,330
Total loans	1,501,780	1,517,313

⁽¹⁾ Corresponds to notes that were not tendered in the debt exchange made in December 2004 and bear an annual interest rate of 10.375%.

Issuance of notes under the 2007 Global Program:

The Extraordinary Shareholders' meeting held on December 21, 2006 approved the creation of the Global Program for the issuance of new notes of a maximum aggregate amount of US\$ 650,000,000. This Program was authorized by the CNV on January 18, 2007.

With the aim of improving the indebtedness profile of the Company and avoiding some of the restrictive covenants in the Company's previous debt issued in 2004, in May and June 2007, TGS succeeded in refinancing its financial debt by means of the issuance of new notes in an amount of US\$ 500,000,000 within the 2007 Global Program, and the prepayment of its prior debt by a tender offer, the redemption of those notes not tendered and the prepayment of certain loans from the IDB loans. The new notes have a final maturity on May 14, 2017, and accrue interest at a fix annual rate

TRANSPORTADORA DE GAS DEL SUR S.A.

NOTES TO THE CONSOLIDATED FINANCIAL STATEMENTS FOR THE YEARS ENDED DECEMBER 31, 2010, 2009 AND 2008

(Amounts stated in thousands of Argentine pesos as described in Note 2.b.,
except for per share and per ADS amounts in Argentine pesos or unless otherwise indicated)

of 7.875%, payable semi-annually. The principal amount will be amortized in four equal payments, which mature on May 14, 2014, 2015, 2016 and 2017. Public trading of these notes was authorized by the *Bolsa de Comercio de Buenos Aires* ("BCBA"), the *Mercado Abierto Electrónico* ("MAE") and the Luxembourg Stock Exchange.

With the aim of reducing its financial indebtedness and considering the favorable market conditions, between August 2008 and August 2010, TGS proceeded to cancel notes with a nominal value of US\$ 125,976,000, which were previously bought on the market at prices below their nominal value. These transactions generated a gain of Ps. 5,129, Ps. 10,829 and Ps. 113,981 for the years ended December 31, 2010, 2009 and 2008, respectively, associated with the purchase of notes with a nominal value of US\$ 21,326,000, US\$ 9,650,000 and US\$ 95,000,000 respectively. As of December 31, 2010, TGS' financial indebtedness amounted to US\$ 374,024,000 and thus, the amortization payments are expected to amount to US\$ 93,506,000 each.

Covenants:

The Company is subject to some restrictive covenants under its outstanding debt obligations which include, among others, some restrictions on the incurrance of new debt, dividend payments, the granting of guarantees, assets sales and transactions with related companies.

The Company may incur new debt, under these restrictions, among others:

- a. After incurring the new debt, (i) the consolidated coverage ratio (quotient of the consolidated adjusted EBITDA -earnings before financial expenses, income tax, depreciation and amortization- and the consolidated interest expenses) is equal or higher than 2.0:1; and (ii) the consolidated debt ratio (quotient of the consolidated debt and the consolidated EBITDA) is equal or lower than 3.75:1;
- b. for the refinancing of the outstanding financial debt; and
- c. in the form of advances from customers.

The Company may pay dividends as long as (i) the Company is not in default under the new debt obligations, (ii) immediately after the dividend payment, the Company would be able to incur in additional indebtedness pursuant to a from the preceding paragraph.

Derivative financial instruments

In November 2007, the Company entered into a forward exchange contract with a major financial institution. By means of this hedge agreement, the Company ensured the purchase of US\$ 9 million at an exchange rate of Ps. 3.227 per U.S. Dollar, in order to afford the interest payment of its financial debt on May 14, 2008. As of December 31, 2007, its fair value amounts to approximately negative Ps. 90 and was recorded in "Current Loans" with debit to "Other Comprehensive Loss" account. The transaction generated a loss of Ps. 447, which was recorded under the line item "Net Financial Expenses" in the year ended December 31, 2008.

7. REGULATORY FRAMEWORK

a) General framework and current tariff context:

The Company's natural gas transportation business is regulated by Law No. 24,076 ("the Natural Gas Act"), its regulatory Decree No. 1,738/92 and by regulations issued by ENARGAS, which is entitled, among other things, to set the basis for the calculation, monitoring and approval of tariffs (the "Regulatory Framework"). According to the Regulatory Framework, transportation tariffs were to be calculated in US dollars and converted into Argentine pesos at the time the customer was billed using the exchange rate prevailing at that time. The basic gas transportation tariffs charged by TGS had been established at the time of the privatization of GdE and were to be adjusted, subject to prior authorization, in the following cases: (i) semi-annually to reflect changes in the

TRANSPORTADORA DE GAS DEL SUR S.A.

NOTES TO THE CONSOLIDATED FINANCIAL STATEMENTS FOR THE YEARS ENDED DECEMBER 31, 2010, 2009 AND 2008

(Amounts stated in thousands of Argentine pesos as described in Note 2.b.,
except for per share and per ADS amounts in Argentine pesos or unless otherwise indicated)

US producer price index (“PPI”) and (ii) every five years according to efficiency and investment factors determined by ENARGAS. The “efficiency factor” is a reduction to the base tariff resulting from future efficiency programs while the “investment factor” increases the tariffs to compensate the licensees for future investments which are not repaid through tariffs. Also, subject to ENARGAS approval, tariffs were to be adjusted to reflect non-recurrent circumstances or tax changes, other than income tax.

The terms and conditions as described in the precedent paragraph in connection with tariff adjustments contemplated within the Regulatory Framework are no longer effective since the enactment of the Public Emergency Law in early 2002 (the “Emergency Law”), which, among other provisions, eliminated tariff increases based on US dollar exchange rate fluctuations, foreign price indexes or any other indexing procedure and established a conversion rate of one peso to one US dollar for tariffs. The Emergency Law also granted the Executive Branch power to renegotiate contracts entered into with private utility companies, pursuant to the framework included in the said law as long as it is in force, which will expire in December 31, 2011, after several extensions.

In July 2003, the Unit for Renegotiation and Assessment of Utilities Contracts (“UNIREN”) was created under the joint jurisdiction of the Ministry of Economy and Production and the Ministry of Federal Planning, Public Investment and Services (“MPFIPyS”). UNIREN conducts the renegotiation process of the contracts related to utilities and public works, and is entitled to enter into total or partial agreements with the licensees and submit projects regulating the transitory adjustment of tariffs and prices, among other things.

In June and November 2005, TGS received two proposals from UNIREN. Said proposals provided for a tariff increase of 10%, an overall tariff review, and required TGS’s and its shareholders’ abandonment of any claim or lawsuit resulting from the effects of the Public Emergency Law on the License prior to the effectiveness of a renegotiation of the License, and also demanded TGS to hold the Argentine government harmless from any claim or lawsuit filed by its shareholders. Additionally, said proposals required the Company’s and its shareholders’ abandonment of any future claim or lawsuit regarding the PPI tariff adjustments which were not applied in 2000 and 2001. TGS responded to the proposals, and declared that the original 10% increase was insufficient and committed not to file any administrative, arbitration or judicial claim or lawsuit in Argentina or abroad, as long as a reasonable renegotiation agreement was reached. Moreover, TGS stated that the Company is determined to make its best efforts to obtain similar commitments from its investors.

In November 2005, in response to the requirement made by the UNIREN, CIESA and Petrobras Argentina Holding (as CIESA’s shareholder) confirmed that they had not initiated or intended to initiate in the future any claim against the Argentine Republic. Furthermore, Ponderosa Assets L.P. (“Ponderosa”) as a controlling company of each of Enron Pipeline Company Argentina S.A. (“EPCA”) and Enron Argentina CIESA Holding S.A. (“EACH”) (both TGS’s shareholders at that time, and in the case of EPCA, currently CIESA’s minority shareholder) informed on the existence of a claim which, jointly with Enron Corp., it had initiated against the Argentine Republic before the International Center for the Settlement of Investment Disputes (“ICSID”) under the scope of the World Bank, and stated that it would only consider waiving its claim if Ponderosa has received fair compensation. In May 2007, the ICSID ordered the Argentine Government to pay US\$ 106.2 million to Enron Corp. An ICSID committee annulled the award rendered in 2007 and ordered the American corporation to reimburse the Argentine Republic the total amount of the annulment award costs. This annulment does not prevent the plaintiff from filing a new claim before said tribunal. On October 18, 2010, Enron Creditors Recovery Corp. and Ponderosa Assets L.P. filed a new claim against the Argentine Republic before the ICSID. Currently, preparatory acts are being carried out for the establishment of the Tribunal that will hear the case.

On October 9, 2008, TGS signed a transitional agreement with the UNIREN that contemplated a tariff increase of 20%, which is retroactively applicable to September 1, 2008. According to this agreement, the funds generated by this tariff increase would be temporarily deposited in a trust fund until TGS needed them to carry out an investment plan for its pipeline system. The total of the investment plan had been executed with TGS’ own funds.

On December 3, 2009, the Executive Branch ratified this transitional agreement through the Presidential Decree No. 1,918/09. By means of this Decree, TGS will be able to bill the tariff increase to its clients as soon as ENARGAS publishes the new tariffs chart and sets the methodology to bill the retroactive effect. However, ENARGAS has not carried out these duties and due to this delay, in August 2010, TGS requested ENARGAS

**NOTES TO THE CONSOLIDATED FINANCIAL STATEMENTS
FOR THE YEARS ENDED DECEMBER 31, 2010, 2009 AND 2008**

(Amounts stated in thousands of Argentine pesos as described in Note 2.b.,
except for per share and per ADS amounts in Argentine pesos or unless otherwise indicated)

authorization to issue the Tariff Chart including the 20% transitory tariff increase and the retroactive collection methodology, requesting the application of an interest rate in line with the established method of payment. ENARGAS responded to TGS that they had submitted the records and the tariff project to the Coordination and Management Control Under Secretariat ("SCyCG"), which is under the scope of the MPFIPyS, based on the Resolution No. 2000/2005 of the MPFIPyS.

On September 30, 2010, the Company filed an acción de amparo (a summary proceeding to guarantee constitutional rights) against the ENARGAS and the SCyCG in order to obtain the implementation of the new tariff increase schedule. On October 25, 2010, the ENARGAS and the SCyCG provided the information required by the Judge on October 19, 2010. On November 8, 2010 the Company was served notice of the judgment that upheld the injunction filed by TGS. Said judgment orders the SCyCG to return to ENARGAS - within a two-day period- the documents remitted by said body in connection with the Tariff Chart applicable to TGS under Decree No. 1,918/09; and orders the ENARGAS -within two days following reception of said documents- to set the Tariff Chart and the retroactive collection methodology. ENARGAS and the SCyCG filed an appeal against the judgment that upheld the acción de amparo filed by TGS.

Moreover, on November 16, 2010, TGS received an invitation from the UNIREN in order to move forward with the renegotiation of the License Agreement within the scope and in the terms of the Emergency Law, to which end the UNIREN requires the suspension of claims, appeals, or administrative or judicial action with respect to the remuneration under the License Agreement taken against the Federal Government. On November 18, 2010, the Company decided to authorize the suspension of the acción de amparo mentioned above for a twenty-working-day period automatically renewable at the expiration of said term (unless the Board before or at the expiration of each period decides not to renew it) in order to move forward with the renegotiation of the License Agreement. On December 28, 2010, TGS requested the ENARGAS and the MPFIPyS to join its request to suspend the acción de amparo, and as of the date of the issuance of these consolidated financial statements, the Company has not received any favorable response in this matter.

On April 5, 2011, the Second Chamber of the Court of Appeals in administrative federal matters set a 60 business day term for the SCyCG to act according to the provisions of Resolution No. 2000/2005 and return to ENARGAS the documents remitted by said Body, and for the ENARGAS to decide -within a 60 business day term as from reception of said documents-, following verification of compliance with the provisions set forth in the transitory agreement dated October 9, 2008, on the tariff adjustment and the Transitional Tariff Chart stipulated therein. TGS and the ENARGAS filed an extraordinary appeal before the Court of Appeals, which were dismissed by the Court of appeals on May 27, 2011.

As over one year has elapsed since the enactment of the Decree No. 1,918/09 and the granting of the above mentioned appeal with suspensive effect, which implied a substantial change in the scenario considered when the tariff increase was recorded, the Board of Directors of the Company on December 16, 2010 resolved: (i) to discontinue the recognition of the tariff increase revenue; (ii) to reverse the credit provision of the tariff increase revenue already accrued in the year ended December 31, 2009 and in the nine-month period ended September 30, 2010. The reversal of the tariff increase does not imply any relinquishment of TGS's rights resulting from the Decree No. 1,918/09. The revenue derecognition generated a Ps. 85 million negative impact on the Company's net income in the fiscal year ended December 31, 2010.

According to the transitional agreement signed with the UNIREN on October 9, 2008, mentioned above, the Company should reach a consensus with the UNIREN on the terms and conditions of the overall agreement subscription before the expiration date of the Emergency Law, on December 31, 2011. In the case of not reaching this consensus, the UNIREN will inform the Executive Branch with the recommendations of the procedural steps to follow.

In this regard, in October 2008, TGS received a proposal of a license comprehensive renegotiation agreement from the UNIREN (which includes the initial 20% tariff increase), whose purpose is the license renegotiation and the overall tariff revision. As of the date of the issuance of these consolidated financial statements, TGS is still evaluating the terms of this proposal and negotiating with the UNIREN the scope of one of its clauses.

The production and commercialization of liquids segment is not regulated by the ENARGAS, and as it is provided in the Transfer Agreement, is organized as a separate business unit within the Company, keeping

TRANSPORTADORA DE GAS DEL SUR S.A.

NOTES TO THE CONSOLIDATED FINANCIAL STATEMENTS FOR THE YEARS ENDED DECEMBER 31, 2010, 2009 AND 2008

(Amounts stated in thousands of Argentine pesos as described in Note 2.b.,
except for per share and per ADS amounts in Argentine pesos or unless otherwise indicated)

accounting information separately. However, the Federal Energy Bureau sets the propane and butane sales price for the local market. This agency determines periodically a minimum volume of propane and butane to be commercialized by the producers in the local market in order to guarantee the domestic supply.

On September 30, 2008 the Federal Energy Bureau and propane and butane producers, among others, signed an agreement on the price stabilization of the propane and butane (“LPG”) bottles whereby the industry players committed to a substantial reduction in the price of LPG bottles from October 1, 2008, to support low-income consumers. This price reduction is partially offset by a subsidy paid by a trust fund created for that purpose. This trust fund receives the funds provided by the rise in the wellhead natural gas price which was authorized by the Argentine government.

The License also establishes, among other restrictions, that the Company will not be allowed to assume CIESA’s obligations, nor to grant loans, real guarantees or any other kind of favor to CIESA’s creditors.

b) Expansion of the gas transportation system

Since 2004, the gas transportation system expansion works have been carried out under the Gas Trust Fund Program framework, which was created through Executive Branch Decree No. 180/04 and Resolution No. 185/04 issued by the MPFIPyS, aimed at financing the expansion of the national gas transportation system in a manner different from that established in the License.

Under such framework, the MPFIPyS, the Federal Energy Bureau and the natural gas transportation companies, among others, signed in April 2006 a Letter of Intent to carry out the second expansion of the gas pipeline system to increase the transportation capacity by 378 MMcf/d. In December 2006, the gas trust fund contracts for the second expansion were signed, and TGS entered into an agreement under which the Company is managing the construction of the expansion.

Ownership of the works of the second expansion will lie with a gas trust fund and the investment will be financed by other gas trust funds, whose trustors are the gas producers and the shippers who subscribed the additional capacity. The works will be repaid with a new tariff charge that will ultimately be paid by the business and industrial users with firm transportation contracts, and not by the residential users. In addition, as the works come into service, TGS assumes responsibility for the rendering of firm transportation services. For these services, TGS is to be paid a monthly Charge for Access and Use (“CAU”), which is, essentially, an amount in lieu of a tariff.

The second expansion involves the installation of over 708 miles of pipeline loops and 196,800 HP of additional power. It also involved the construction of a new pipeline in the Magellan Strait, which was completed in March 2010, and permits the transportation of more natural gas from the Austral basin. As of December 31, 2010, 222 MMcf/d of the second expansion project had been completed and become operational.

Under the above mentioned management agreement signed in December 2006, TGS earned total revenues of Ps. 50.3 million as consideration for the services rendered in managing the construction of the completed portion of the expansion project comprising incremental transportation capacity of 247 MMcf/d. In addition, TGS is negotiating with the ENARGAS and the trustee of the gas trust funds the terms and conditions under which TGS will render operation and maintenance services with respect to this capacity.

The Company is currently negotiating compensation arrangements for the management services associated with the remaining incremental transportation capacity of 131 MMcf/d.

In 2009, TGS collected Ps. 10.6 million plus VAT of Ps. 2.2 from the trust fund and, as of December 31, 2010 the Company holds an account receivable of Ps. 46.5 million (VAT included). In addition, TGS holds an account receivable of Ps. 9.1 million with the trust fund in respect of interest on the receivable.

TRANSPORTADORA DE GAS DEL SUR S.A.

NOTES TO THE CONSOLIDATED FINANCIAL STATEMENTS FOR THE YEARS ENDED DECEMBER 31, 2010, 2009 AND 2008

(Amounts stated in thousands of Argentine pesos as described in Note 2.b.,
except for per share and per ADS amounts in Argentine pesos or unless otherwise indicated)

c) Essential assets:

A substantial portion of the assets transferred by GdE has been defined as essential for the performance of the gas transportation service. Therefore, the Company is required to keep separated and maintain these assets, together with any future improvements, in accordance with certain standards defined in the License.

The Company may not, for any reason, dispose of, encumber, lease, sublease or loan essential assets nor use such assets for purposes other than providing the licensed service without the prior authorization of ENARGAS. Any expansion and improvement that the Company may make to the gas pipeline system after the takeover may only be encumbered to secure loans that have a term of more than one year to finance new expansions and improvements to the licensed service.

Upon expiration of the License, the Company will be required to transfer to the Argentine government or its designee, the essential assets listed in an updated inventory as of the expiration date, free of any debt, encumbrances or attachments, receiving compensation equal to the lower of the following two amounts:

- i) the net book value of the essential assets determined on the basis of the price paid by the acquiring joint venture, and the original cost of subsequent investments carried in US dollars and adjusted by the PPI, net of accumulated depreciation according to the calculation rules to be determined by ENARGAS; or
- ii) the net proceeds of a new competitive bidding.

8. COMMON STOCK AND DIVIDENDS

a) Common stock structure and shares' public offer

As of December 31, 2010, 2009 and 2008 the Company's common stock was as follows:

Common Shares Class (Face value \$ 1, 1 vote)	Amount of common stock, subscribed, issued, paid in, and authorized for public offer
Class "A"	405,192,594
Class "B"	389,302,689
	794,495,283

Class A and B Common Shares have the same rights, which are as follows:

- i) each A and B Common Share has the right to one vote on any matter submitted to the shareholders of the Company for a vote;
- ii) holders of Class A and B Common Shares are entitled to receive ratably any dividends that the Company's Board of Directors may declare out of fund legally available herefore and, upon the Company's liquidation, dissolution or winding up, will be entitled to receive ratably the Company's net assets available after the payment of all debts and other liabilities; and
- iii) Class A and B shareholders have preemptive rights, which entitle them to subscribe pro rata to any new issuance of shares of the Class held by any such shareholder. Class A and B shareholders do not have redemption or conversion rights.

Further, the Company is required by its by-laws to maintain a ratio of Class A Common Shares to Class B Common Shares of 51% to 49%, so any issuance of one of such classes of shares would require the issuance of shares of the other class.

TRANSPORTADORA DE GAS DEL SUR S.A.

NOTES TO THE CONSOLIDATED FINANCIAL STATEMENTS FOR THE YEARS ENDED DECEMBER 31, 2010, 2009 AND 2008

(Amounts stated in thousands of Argentine pesos as described in Note 2.b.,
except for per share and per ADS amounts in Argentine pesos or unless otherwise indicated)

TGS's shares are traded on the BCBA and in the form of the American Depositary Shares ("ADS") (registered with the SEC and representing 5 shares each) on the New York Stock Exchange.

b) Limitation on the transfer of the Company's shares

The Company's by-laws provide that prior approval of ENARGAS and the unanimous approval of CIESA's shareholders, under agreements among them, must be obtained in order to transfer Class "A" shares (representing 51% of common stock). The *Pliego de Bases y Condiciones para la Privatización de Gas del Estado S.E.* states that approval of ENARGAS will be granted provided that:

- The sale covers 51% of common stock or, if the proposed transaction is not a sale, the transaction that reduces the shareholding will result in the acquisition of a shareholding of not less than 51% by another investment company; and
- The applicant provides evidence to the effect that the transaction will not impair the operating quality of the licensed service.

In the case of shareholders of CIESA who have qualified to obtain such condition due to the equity, guarantee and/or technical background of their respective parent companies, the sale of shares representing the capital of such subsidiaries by the respective ultimate, direct or indirect parent companies, and/or the cessation of management running the Company, requires the prior authorization of ENARGAS.

In case the Company wishes to reduce its capital, redeem its shares or distribute any part of its equity, except for the payment of dividends, in accordance with the provisions of the Argentine Business Associations Law, prior authorization from ENARGAS is required.

c) Restrictions on distribution of retained earnings

Under current Argentine legal requirements and CNV standards, 5% of each fiscal year's net income must be appropriated into a legal reserve, provided that there is no unappropriated retained deficit. In such case, the 5% should be calculated on any excess of the net income over the unappropriated retained deficit. This appropriation is legally binding until such reserve equals 20% of the amount which results from the sum of the "Common stock nominal value" and the balance of "Cumulative inflation adjustment to common stock".

In addition, the by-laws provide for the issuance of Profit Sharing Vouchers, as defined in Article 230 of the Argentine Business Associations Law, which Vouchers entitle all regular employees to share in 0.25% of the Company's net income for each year.

According to law No. 25,063, the dividends paid in cash or in kind, in excess of the tax profit, will be subject to a 35% withholding tax of the income tax, as sole and only payment.

Furthermore, the Company is subject to certain restrictions for the payment of dividends, which were contemplated in the outstanding debt agreements (Note 6 – "Covenants").

9. LEGAL AND REGULATORY MATTERS

a) In the framework of the Tax Agreement subscribed by the Argentine Government and the Provinces in 1993, and as from the enactment of provincial Law No. 11,490, TGS required the Tax Bureau of the Province of Buenos Aires to exempt the sales of liquids from the turnover tax. In September 2003, the Tax Bureau of the Province of Buenos Aires, through Resolution No. 4,560/03, denied the exemption. In October 2003, the Company filed an administrative appeal with the Tax Court of the Province of Buenos Aires.

TRANSPORTADORA DE GAS DEL SUR S.A.

NOTES TO THE CONSOLIDATED FINANCIAL STATEMENTS FOR THE YEARS ENDED DECEMBER 31, 2010, 2009 AND 2008

(Amounts stated in thousands of Argentine pesos as described in Note 2.b.,
except for per share and per ADS amounts in Argentine pesos or unless otherwise indicated)

In February 2007, the Tax Court partially upheld TGS's complaint. In its pronouncement, the Tax Court stated that ethane sales were within the scope of the turnover tax exemption but that neither propane nor butane sales qualified for the exemption in the domestic market, because they were not raw materials for an industrial process.

TGS filed an appeal in May 2007 before the Province of Buenos Aires Court alleging that propane and butane sales might be utilized for other uses in addition to those in the petrochemical industry. As of the date of the issuance of these consolidated financial statements, the Court has not issued any order.

On September 26, 2005, TGS was notified of the results of the tax assessment process regarding the turnover tax for the period January 2002 – July 2003, which amounted to Ps. 4.4 million plus interest. On October 18, 2005, TGS presented the motion to dismiss on its belief that the sales of liquids activity was conducted under the tax exemption regime discussed above. On April 12, 2006 the motion to dismiss was rejected and therefore, the Company filed corresponding appeals with the Tax Bureau of the Province of Buenos Aires and jointly with the Arbitral Commission. For that reason, the Tax Bureau resolved that until the Arbitral Commission notifies the parties of its resolution of the matter, the process is suspended. On April 20, 2010, the Arbitral Commission ruled against TGS, and thus, the Company filed an appeal before the Plenary Commission.

On February 19, 2008, TGS was notified with a formal assessment notice of Ps. 3.6 million (not including interest) regarding the payment of the turnover tax corresponding to the fiscal period ranging from August 2003 to December 2004. On March 11, 2008, TGS filed a motion to dismiss the assessment with the Tax Bureau of the Province of Buenos Aires which was rejected and thus, the Company filed an appeal with the Tax Bureau of this province in January 2009. As well, the Company appealed with the Arbitral Commission, and thus, the Tax Bureau of this province suspended the process until the Arbitral Commission notifies its resolution.

As of December 31, 2010, TGS maintains a provision of Ps. 29.1 million for these matters.

- b) In February 2005, the Company was served notice by the CNV that certain notes issued in December 2004 by US\$178 million would not fulfil the requirements provided by Article 56 of Chapter VI of the CNV Standards and in Resolution No. 470. If the CNV's interpretation is upheld, those notes would not be entitled to the benefits of the tax exemption provided by the law No. 23,576, thus the Company would be exposed to a contingency due to the payment of the withholding income tax on interest payments.

On February 18, 2005, TGS filed an appeal with the CNV, alleging sufficient grounds to support the applicability of Article 56, Chapter VI of CNV Standards and Resolution No. 470/04. However, the CNV denied the Company's appeal and on July 8, 2005, TGS filed an appeal with the Ministry of Economy and Production which was subsequently rejected in November 2006. In December 2006, TGS filed a second appeal with said Ministry seeking reconsideration of the rejection, which was rejected in June 2007. In November 2007, TGS challenged said resolution before the Federal Administrative Court.

As of December 31, 2010, the amount of this contingency ranges between US\$ 8 million and US\$ 24 million (including interest as of this date), depending on the applicable withholding tax rates determined on payments of interest, which in turn will depend on the country of residence of the note holders at the date of each interest payment. The Company does not have available information that permits the identification of the country of residence of each note holder on each interest payment date.

The Company believes that it has sufficient grounds and other legal instances to defend its position and thus, as of December 31, 2010, TGS has not recorded any provision in respect of this proceeding.

- c) In November 2002, the Tax Bureau of the province of Santa Cruz sent TGS a formal assessment notice for the payment of the turnover tax calculated on the natural gas price used by TGS as fuel to render its transportation services. This assessment corresponds to the period from January 1998 to October 2002. In August 2005, the Company paid the amount claimed of Ps. 1.6 million (including interests to December 4, 2002) and started a tax recovery process, first exhausting all other procedural steps, with the Tax Bureau of the province and then initiating a proceeding in the Provincial Tax Court.

TRANSPORTADORA DE GAS DEL SUR S.A.

NOTES TO THE CONSOLIDATED FINANCIAL STATEMENTS FOR THE YEARS ENDED DECEMBER 31, 2010, 2009 AND 2008

(Amounts stated in thousands of Argentine pesos as described in Note 2.b.,
except for per share and per ADS amounts in Argentine pesos or unless otherwise indicated)

In November 2005, TGS received a notice from the Tax Bureau of the province of Río Negro claiming the payment of Ps. 0.2 million, on the same grounds as those of the Province of Santa Cruz, for the period from January 1999 to May 2005. On February 1, 2008, TGS initiated a tax recovery process with the Tax Court of the province of Río Negro to obtain the refund of Ps. 0.5 million paid in November 2007, after exhausting the same procedural steps followed in the case of province of Santa Cruz.

In December 2008, the Tax Bureau of the province of Tierra del Fuego e Islas del Atlántico Sur sent TGS a formal assessment notice for the payment of Ps. 6.4 million corresponding to 2002-2007 period, which was denied by the Company. On October 19, 2009, said Tax Bureau notified TGS the dismissal of the Company's denial motion and thus, on October 28, 2009, the Company filed an administrative appeal.

As of December 31, 2010, the Company recorded a provision of Ps. 57.4 million in respect of this contingency under the line item "Provisions for contingencies", which amount was determined in accordance with the estimations of tax and interest, that would be payable as of such date, were all of the above mentioned proceedings to be resolved against the Company.

The Company's management believes that, if the Company's position fails and the turnover tax has to be paid, TGS has a right to recover it by a transportation tariff increase as set forth in the License.

- d) In 1996, GdE filed a legal action against the Company for the reimbursement for the cost of construction of two compressor plants. After a long litigation process, in 2003, the Supreme Court of Justice sustained GdE's claim and ordered TGS to pay the market price of the compressor plants at the date of the addition to TGS assets plus interest and litigation expenses. As of December 31, 2010, the remaining balance to be paid by TGS amounted to Ps. 58.8 million.

On January 14, 2004, TGS signed an agreement with the UNIREN, which was subsequently ratified by the Argentine government through the Decree No. 959/04 through which TGS carried out the expansion of the Cordillerano Pipeline. The cost of the expansion was taken as a payment on account of the final amount to be paid as a consequence of the outcome of the lawsuit described above. The Argentine Government owns such assets and granted their right of use to TGS, who operates and maintains such assets. Therefore, the cost of these works plus the cost of complementary works carried out in 2006 were recorded under "Other Liabilities" in the amount of Ps. 53.6 million, offsetting the provision mentioned above. As of December 31, 2010, the net provision amounted to Ps. 5.2 million.

- e) On November 30, 2007, TGS was served notice of the summary proceedings initiated against the Company by the Argentine Central Bank ("BCRA"). This entity charges TGS with the late settlement of foreign currencies for an approximate amount of US\$ 14.7 million. The questioned transactions were conducted between January 2002 and February 2003, a period in which the applicable exchange regulations were subject to frequent changes and the terms for the settlement of foreign currencies were shorter than the current ones.

On February 25, 2008, TGS filed a motion before the BCRA requesting the dismissal of the summary proceedings on the grounds of lack of foreign exchange violation. On September 28, 2010, documentary hearings were conducted and, on October 13, 2010, final arguments were given; therefore the case is ready to be brought to Economic Criminal Courts for resolution. Based on the opinion of the Company's legal advisors, the amount of the fine that may result from an eventual adverse sentence will not be greater than US\$ 7.3 million. The Company believes that it has several levels of appeal through which to defend its position, and accordingly, as of December 31, 2010, TGS has not recorded any provision in respect of this proceeding.

- f) In addition to the matters discussed above, the Company is a party to certain lawsuits and administrative proceedings arising in the ordinary course of business.

TRANSPORTADORA DE GAS DEL SUR S.A.

**NOTES TO THE CONSOLIDATED FINANCIAL STATEMENTS
FOR THE YEARS ENDED DECEMBER 31, 2010, 2009 AND 2008**

(Amounts stated in thousands of Argentine pesos as described in Note 2.b.,
except for per share and per ADS amounts in Argentine pesos or unless otherwise indicated)

10. BALANCES AND TRANSACTIONS WITH RELATED COMPANIES

For the years ended December 31, 2010 and 2009, TGS sold propane and butane to PIFCo at international prices minus a fixed discount per ton, according to common market practices for this type of transactions. Under the same scheme, for the year ended December 31, 2009, TGS sold natural gasoline to PIFCo.

Petrobras Argentina is TGS's technical operator, according to the approval of ENARGAS in June 2004, and subject to the terms and conditions of the Technical Assistance Agreement which provides that Petrobras Argentina is in charge of providing services related to the operation and maintenance of the gas transportation system and related facilities and equipment, to ensure that the performance of the system is in conformity with international standards and in compliance with certain environmental standards. For these services, the Company pays a monthly fee based on a percentage of the operating income of the Company. In November 2008, TGS and Petrobras Argentina approved the renewal of the Technical Assistance Agreement for a three-year term, expiring in December 2011.

Additionally, TGS renders natural gas transportation services to Petrobras Argentina, for a 106 MMcf/d firm capacity by means of two contracts which expire in 2013 and 2014. Moreover the Company, under certain agreements, processes the natural gas in Cerri Complex and commercializes the liquids for Petrobras Argentina's account and on behalf of it. For consideration, TGS collects a commission which is calculated based on the liquids' selling price. The Company and Petrobras Argentina are currently negotiating a new contract for these services to replace the agreement that expired at the end of 2010.

As of December 31, 2010 and 2009, the outstanding balances corresponding to the Board of Directors' and the Statutory Committee members' compensations amounted to Ps. 714 and Ps. 94, respectively. The accrued amounts for such compensations for the years ended December 31, 2010 and 2009 were Ps. 2,257 and Ps. 1,950, respectively.

The detail of significant outstanding balances for transactions entered into by TGS and its related parties as of December 31, 2010 and 2009 is as follows:

11. SUBSIDIARY AND AFFILIATES

Telcosur:

The corporate purpose of Telcosur is to render telecommunication services. Telcosur was created to assure the optimal utilization of TGS's telecommunication system. TGS's equity interest in the company is 99.98% and the remaining 0.02% is held by Petrobras Energía Internacional S.A.

Link:

Link was created in February 2001, with the purpose of the operation of a natural gas transportation system, which links TGS's gas transportation system with Gasoducto Cruz del Sur S.A. pipeline. The connection pipeline extends from Buchanan, located in the high-pressure ring that surrounds the city of Buenos Aires, which is part of TGS's pipeline system, to Punta Lara. TGS's ownership interest in such company is 49% and Dinarel S.A. holds the remaining 51%.

TGU:

TGU is a company incorporated in Uruguay. This company rendered operation and maintenance services to Gasoducto Cruz del Sur S.A. and its contract terminated in 2010. TGS holds 49% of its common stock and Petrobras Argentina holds the remaining 51%.

EGS:

In September 2003, EGS, a company registered in Argentina, was incorporated. The ownership is distributed between TGS (49%) and TGU (51%). EGS operated its own pipeline, which connects TGS's main pipeline system in the Province of Santa Cruz with a delivery point on the border with Chile.

TRANSPORTADORA DE GAS DEL SUR S.A.

**NOTES TO THE CONSOLIDATED FINANCIAL STATEMENTS
FOR THE YEARS ENDED DECEMBER 31, 2010, 2009 AND 2008**

(Amounts stated in thousands of Argentine pesos as described in Note 2.b.,
except for per share and per ADS amounts in Argentine pesos or unless otherwise indicated)

12. DIFFERENCES BETWEEN ARGENTINE GAAP AND US GAAP

The accompanying consolidated financial statements have been prepared in accordance with Argentine GAAP, which differ in certain significant respects from US GAAP. Such differences involve methods of measuring the amounts shown in the consolidated financial statements, as well as additional disclosures required by US GAAP and Regulation S-X of the SEC.

I. Differences in measurement methods

The following reconciliation to US GAAP does not include an elimination of the adjustments to the consolidated financial statements to account for the effects of inflation required under Argentine TR No. 6, (as amended by TR No. 19), as permitted by Regulation S-X of the SEC.

The principal differences, other than inflation accounting, between Argentine GAAP and US GAAP as they relate to the Company are described below, together with an explanation, where appropriate, of the method used in the determination of the necessary adjustments.

	Year ended December 31,		
	2010	2009	2008
Reconciliation of net income:			
Net income under Argentine GAAP	102,236	178,380	175,091
US GAAP adjustments:			
Capitalization of interest cost, net (Note 12.a.)	(4,022)	(4,310)	(4,237)
Deferred income tax under US GAAP (Note 12.b.)	(18,852)	72,984	30,038
Non-current investment in unconsolidated affiliated companies (Note 12.c.)	232	251	154
Capitalized foreign exchange differences (Note 12.d.)	7,525	7,514	7,519

Noncontrolling interest	1	1
Shareholders' equity under US GAAP	2,633,642	2,437,781

Description of changes in shareholders' equity under US GAAP:

	For the years ended December 31,	
	2010	2009
Shareholders' equity under US GAAP as of the beginning of the year	2,437,781	2,335,045
Other comprehensive income / (loss)	45	(3)
Distribution of cash dividends	(30,325)	(30,000)
Net income under US GAAP	226,141	132,739
Shareholders' equity under US GAAP as of the end of the year	2,633,642	2,437,781

a) Capitalization of interest cost

Under Argentine GAAP, the Company capitalized financial costs comprising interest and exchange differences amounting to Ps. 10,645, Ps. 7,794 and Ps. 6,964 for the years ended December 31, 2010, 2009 and 2008, respectively.

Under US GAAP, the Company applied the provisions of FASB Accounting Standards Codification ("ASC") 835, Interest, which requires interest capitalization on assets which have a period of time to get them ready for their intended use. Capitalization of foreign exchange differences is not allowed under FASB ASC 835.

The US GAAP reconciling item represents the net effect of (i) reversing the total financial costs capitalized under Argentine GAAP net of its corresponding accumulated depreciation (Ps. 22,485 and Ps. 19,433 for the years ended December 31, 2010 and 2009, respectively) and (ii) computing interest capitalization in accordance with FASB ASC 835, net of its corresponding accumulated depreciation (Ps. 18,010 and Ps. 18,980 for the years ended December 31, 2010 and 2009, respectively).

b) Deferred income tax

During the years ended December 31, 2010, 2009 and 2008, under Argentine GAAP, the Company has calculated income taxes using the deferred tax method, which requires the recognition of the tax consequences of temporary differences between the financial statement carrying amounts and the tax basis of existing assets and liabilities. This standard is similar to the principles of US GAAP set forth in FASB ASC 740, Income Taxes.

However, as mentioned in Note 2.k), Argentine GAAP allowed companies to treat the difference between the price-level restated amount of property, plant and equipment and its historical basis as a permanent difference, and the Company has followed this criteria. Under US GAAP, the Company applies FASB ASC 830, Foreign

TRANSPORTADORA DE GAS DEL SUR S.A.

NOTES TO THE CONSOLIDATED FINANCIAL STATEMENTS FOR THE YEARS ENDED DECEMBER 31, 2010, 2009 AND 2008

(Amounts stated in thousands of Argentine pesos as described in Note 2.b.,
except for per share and per ADS amounts in Argentine pesos or unless otherwise indicated)

Currency Matters, which requires such differences to be treated as temporary differences in calculating deferred income taxes.

In addition, the US GAAP adjustment includes the effect on deferred income taxes of the reconciling items, as appropriate.

FASB ASC 740 prescribes a comprehensive model for how a company should recognize, measure, present, and disclose in its financial statements, uncertain tax positions that it has taken or expects to take on a tax return. According to US GAAP a company has to recognize in its financial statements the impact of tax positions that meet a "more likely than not" threshold, based on the technical merits of the position. The tax benefits recognized in the financial statements from such a position should be measured based on the largest benefit that has a greater than fifty percent likelihood of being realized upon settlement. For the years ended December 31, 2010 and 2009, the Company has no material unrecognized tax benefit which would favorably affect the effective income tax rate in future periods and do not believe there will be any significant increases or decreases within the next twelve months. The Company has elected to classify interest and penalties related to unrecognized tax benefits, if and when required, as part of income tax expense in the consolidated statements of operations. No interest or penalties have been accrued for the years ended December 31, 2010 and 2009.

The Company and its subsidiary file income tax returns only in Argentina due to the fact that taxable income was generated from Argentine companies. TGS is no longer subject to income tax examinations by tax authorities for years prior to 2004.

c) Non-current investments in unconsolidated affiliated companies

The Company has assessed the impact of US GAAP adjustments for its equity method investees. As a consequence of this assessment, the Company recognized a net gain of Ps. 0.2 million, Ps. 0.3 million and Ps. 0.2 million for the years ended December 31, 2010, 2009 and 2008, respectively. This adjustment relates to the reversal, under US GAAP, of capitalized foreign exchange differences, the discount of certain receivables and the impairment of long-lived assets, as well as the application of FASB ASC 740 for the recognition of income taxes.

d) Capitalized foreign exchange differences

As discussed in Note 2.i), under Argentine GAAP, the Company capitalized the foreign exchange loss derived from the devaluation of the peso as from January 6, 2002 to July 28, 2003, amounting to Ps. 177.3 million. The amortization expenses amounted to Ps. 7.5 million for each year ended December 31, 2010, 2009 and 2008. Under US GAAP, such foreign exchange loss was charged to income every year.

e) Discounted value of certain receivables

Argentine GAAP requires that long term receivables and liabilities (except for deferred tax assets and liabilities) be valued based on the best estimate of the discounted value of amounts expected to be collected or paid, as applicable. Accordingly, the Company recorded an adjustment of Ps. 17.0 million in fiscal years 2010 over the nominal value of a long term tax credit.

Under US GAAP, the Company applied the provisions of FASB ASC 835-30-15, which requires that those transactions whose interest rates are affected by attributable or legal restrictions prescribed by a governmental agency need not be measured by applying the interest method. Therefore the above mentioned adjustment made under Argentine GAAP was reversed under US GAAP.

TRANSPORTADORA DE GAS DEL SUR S.A.

**NOTES TO THE CONSOLIDATED FINANCIAL STATEMENTS
FOR THE YEARS ENDED DECEMBER 31, 2010, 2009 AND 2008**

(Amounts stated in thousands of Argentine pesos as described in Note 2.b.,
except for per share and per ADS amounts in Argentine pesos or unless otherwise indicated)

f) Accounting for current investments

Under Argentine GAAP, the Company's investments in mutual funds have been value at their respective fair value and time deposits at amortized costs. Unrealized gains and losses have been included in the Statement of Income.

Under US GAAP, in accordance with FASB ASC 320, Investments, the Company has classified investments in mutual funds as available for sale which were valued at fair value with unrealized gains amounted to Ps. 0.2 million, Ps. 0.1 million and Ps. 0.1 million for the years ended December 31, 2010, 2009 and 2008, respectively, recorded in accumulated other comprehensive income.

TGS has classified its time deposits as held to maturity and are valued at their amortized costs.

During the years ended December 31, 2010 and 2009, the amortized cost basis of held to maturity securities were Ps. 177.6 million and Ps. 131.6 million, respectively. Unrealized gains were Ps. nil, for the years ended December 31, 2010, 2009 and 2008. These securities matured within the first quarter of the following year.

g) Revenue recognition

As mentioned in Note 7.a), on October 9, 2008, TGS signed a transitional agreement with the UNIREN that contemplated a tariff increase of 20%, which is retroactively applicable to September 1, 2008. On December 3, 2009, the Executive Branch ratified this transitional agreement through the Presidential Decree No. 1,918/09. TGS will bill this tariff increase to its clients as soon as ENARGAS publishes the new tariffs schedule and sets the methodology to bill the retroactive effect.

In the year ended December 31, 2009, under Argentine GAAP, as Presidential Decree No. 1,918/09 established the TGS' right to the tariff increase, the Company recognized sales for Ps. 122.1 million, following the provisions contained in TR No. 16, which states that the Company has an asset when it has the capacity to generate positive cash flow.

As over one year has elapsed since the enactment of the Decree No. 1,918/09 and the granting of the appeal filed by the ENARGAS and the SCyCG against the judgement that upheld the *acción de amparo* (a summary proceeding to guarantee constitutional rights) filed by TGS, which implied a substantial change in the scenario considered when the tariff increase was recorded, on December 16, 2010, the Board of Directors of the Company resolved: (i) to discontinue the recognition of the tariff increase revenue; (ii) to reverse the credit provision of the tariff increase revenue already accrued in the year ended December 31, 2009.

Under US GAAP, the Company followed the provisions contained in FASB ASC 605, "Revenue recognition", which states the criteria to recognize revenues. The Company considered that the criterion which states that collectibility should be reasonably assured is not met, as the Company is not able to bill the tariff increase until ENARGAS publishes the new tariffs schedule. Based on the above, as of December 31, 2009, the Company did not recognize the tariff increase.

II. Additional disclosure requirements

a) Balance sheet classification differences:

Under Argentine GAAP, in accordance with the provisions contained in TR No. 9, net deferred tax assets (liabilities) are to be classified as non-current assets (liabilities). Under US GAAP, the Company applied the provisions contained in FASB ASC 740, which states that in a classified statement of financial position, an enterprise shall separate deferred tax liabilities and assets into a current amount and a non-current amount. Deferred tax liabilities and assets shall be classified as current or non-current based on the classification of the related asset or liability for financial reporting.

TRANSPORTADORA DE GAS DEL SUR S.A.

**NOTES TO THE CONSOLIDATED FINANCIAL STATEMENTS
FOR THE YEARS ENDED DECEMBER 31, 2010, 2009 AND 2008**

(Amounts stated in thousands of Argentine pesos as described in Note 2.b.,
except for per share and per ADS amounts in Argentine pesos or unless otherwise indicated)

b) Statement of income classification differences:

Argentine GAAP provides that only returns and other allowances are deducted from net revenues, while direct taxes and other costs directly associated with revenues should be presented as operating costs, i.e. gross revenue taxes. Under US GAAP, direct taxes and other costs directly associated with revenues are deducted from revenues.

In 2010, 2009 and 2008, under Argentine GAAP, TGS recorded revenues for Ps. 9.6 million, Ps. 0.5 million and Ps. 3.2 million, respectively, which collectibility was not reasonably assured. Therefore, allowances for doubtful accounts for such amount were registered in those years and they were charged to selling expenses. Under US GAAP, the Company followed the provisions stated by the FASB ASC 605, Revenue Recognition, which stated that if the collectibility is not reasonably assured, the Company should not recognize the revenue.

c) Comprehensive income:

FASB ASC 220, Comprehensive income, establishes guidelines for the reporting and display of comprehensive income and its components in a full set of general-purpose financial statements. Comprehensive income represents the change in shareholders' equity of the Company during the period from transactions and other events and circumstances from non-owner sources. It includes all changes in equity during a period except those resulting from investments by owners and distributions to owners.

The following table summarizes the components of comprehensive income for the years ended December 31, 2010, 2009 and 2008:

	2010	2009	2008
Net income under US GAAP	226,141	132,739	208,469
Other comprehensive income:			
Forward exchange instrument fair value (net of income taxes of Ps. 48 at December 31, 2008)	-	-	90
Unrealized gains and losses – Available for sale securities – (net of income taxes of Ps. 56, (Ps. 1) and Ps. 33 at December 31, 2010, 2009 and 2008, respectively)	45	(3)	62
Comprehensive income	226,186	132,736	208,621

Accumulated other comprehensive income at December 31, 2010, 2009 and 2008, was as follows:

	2010	2009	2008
Unrealized gains and losses - Available for sale securities	104	59	62
Accumulated other comprehensive income	104	59	62

d) Separate presentation of Shareholders' equity components:

Under Argentine GAAP, in accordance with the provisions contained in TR No. 21, noncontrolling interest is not part of the Shareholders' equity and it is classified in a separate item between total liabilities and Shareholders' equity. Under US GAAP, the Company applies the provisions contained in FASB ASC 810 Consolidation, which states that noncontrolling interest has to be classified as part of the Shareholders' equity.

TRANSPORTADORA DE GAS DEL SUR S.A.

**NOTES TO THE CONSOLIDATED FINANCIAL STATEMENTS
FOR THE YEARS ENDED DECEMBER 31, 2010, 2009 AND 2008**

(Amounts stated in thousands of Argentine pesos as described in Note 2.b.,

The following table presents the shareholder's equity components under US GAAP:

	Year ended December 31,		
	2010	2009	2008
Common Stock - Class "A" 405,192,594 shares issued and outstanding, Ps.1 par value	405,192	405,192	405,192
Common Stock - Class "B" 389,302,689 shares issued and outstanding, Ps.1 par value	389,303	389,303	389,303
Total Common Stock	794,495	794,495	794,495
Inflation adjustment to common stock	1,145,012	1,145,012	1,145,012
Legal reserve	208,273	199,354	190,597
Accumulated retained earnings	485,757	298,860	204,878
Net income attributable to noncontrolling interest	1	1	1
Accumulated other comprehensive income	104	59	62
Shareholders' equity under US GAAP	2,633,642	2,437,781	2,335,045

e) Deferred income taxes:

The components of the net deferred tax liability under US GAAP as of December 31, 2010 and 2009, are the following:

	2010	2009
Deferred tax assets		
Allowance for doubtful accounts	9,538	1,849
Accounts receivable	-	42,729
Provision for contingencies	38,190	31,085
Other provisions	2,343	2,343
Labor provisions	-	6,042
Other receivables	117	-
Income tax loss carryforward	653	-
Total gross deferred tax assets	50,841	84,048
Deferred tax liabilities		
Property, plant and equipment, net	637,634	662,645
Intangible assets	1,523	1,962
Current investments	1,039	6,046
Deferred revenues	461	550
Total gross deferred tax liabilities	640,657	671,203
Net deferred tax liability	(589,816)	(587,155)

As of December 31, 2010 and 2009, Ps. 39,637 and Ps. 78,002, respectively, were classified as current assets, and Ps. 629,453 and Ps. 665,157, respectively, were classified as non-current liabilities.

All income before income tax and related income tax expense are from Argentine sources. Income tax expenses for the years ended December 31, 2010, 2009 and 2008 consist of the following:

	2010	2009	2008
Current income tax expense	154,180	152,408	146,229
Deferred income tax expense / (benefit)	3,290	(82,060)	(32,878)
Income tax to be recovered ⁽¹⁾	(38,776)	-	-
Income tax loss carryforward	(653)	-	-
Income tax expense	118,041	70,348	113,351

⁽¹⁾ Corresponds to the reversal of the revenue provision recorded in 2009 in respect of the tariff increase (see Note 7.a.)

Minority interest	-	-	-
Net income	226,141	132,739	208,469

g) Disclosure about fair value of financial instruments

As from January 2008 the Company adopted FASB ASC 820, Fair Value Measurement and Disclosure as it relates to financial assets and financial liabilities.

FASB ASC 820 defines fair value as the price that would be received upon sale of an asset or paid upon transfer of a liability in an orderly transaction between market participants at the measurement date and in the principal or most advantageous market for that asset or liability. The fair value should be calculated based on assumptions that market participants would use in pricing the asset or liability, not on assumptions specific to the entity. In

TRANSPORTADORA DE GAS DEL SUR S.A.

**NOTES TO THE CONSOLIDATED FINANCIAL STATEMENTS
FOR THE YEARS ENDED DECEMBER 31, 2010, 2009 AND 2008**

(Amounts stated in thousands of Argentine pesos as described in Note 2.b.,
except for per share and per ADS amounts in Argentine pesos or unless otherwise indicated)

addition, the fair value of liabilities should include consideration of non-performance risk including the Company's credit risk.

In addition to defining fair value, FASB ASC 820 expands the disclosure requirements around fair value and establishes a fair value hierarchy for valuation inputs. The hierarchy prioritizes the inputs into three levels based on the extent to which inputs used in measuring fair value are observable in the market. Each fair value measurement is reported in one of the three levels which is determined by the lowest level input that is significant to the fair value measurement in its entirety. These levels are:

- Level 1 – inputs are based upon unadjusted quoted prices for identical instruments traded in active markets.
- Level 2 – inputs are based upon quoted prices for similar instruments in active markets, quoted prices for identical or similar instruments in markets that are not active, and model-based valuation techniques for which all significant assumptions are observable in the market or can be corroborated by observable market data for substantially the full term of the assets or liabilities.
- Level 3 – inputs are generally unobservable and typically reflect management's estimates of assumptions that market participants would use in pricing the asset or liability. The fair values are therefore determined using model-based techniques that include option pricing models, discounted cash flow models, and similar techniques.

The following section describes the valuation methodologies we use to measure different financial assets and liabilities at fair value.

Investments: include mutual funds traded in an active market. Closing stock prices are readily available from active markets and are used as being representative of fair value. TGS classifies these securities as level 1.

The following table presents its assets measured at fair value on a recurring basis at December 31, 2010:

	Level 1	Level 2	Level 3	Net balance
	(in million of pesos)			
Mutual funds	80	-	-	80
Total	80	-	-	80

On January 1, 2008, the Company adopted FASB ASC 825, Financial Instruments. FASB ASC 825 permits entities to choose to measure many financial instruments and certain other assets and liabilities at fair value on an instrument-by-instrument basis (the fair value option) with changes in fair value reported in earnings. TGS already records mutual funds at fair value in accordance with FASB ASC 320. The adoption of FASB ASC 825 had no impact on the Financial Statements as management did not elect the fair value option for any other financial instruments or certain other assets and liabilities.

Additionally, FASB ASC 825 requires disclosure of fair value information about financial instruments whether or not recognized in the balance sheet, for which it is practicable to estimate fair value. Financial instruments include such items as cash and cash equivalents and accounts receivable and other instruments. FASB ASC 825 excludes from its disclosure requirements certain significant assets and liabilities that are not considered to be financial instruments.

As of December 31, 2010 and 2009, the carrying amount of certain financial instruments used by the Company including cash, cash equivalents, receivables, payables and short term loans are representative of fair value because of the short-term nature of these instruments. The estimated fair value of other non-current assets does not differ significantly from the carrying amount. The estimated fair value of long-term debt is based on their quoted market prices.

The following table reflects the carrying amount and estimated fair value of the Company's financial debt at December 31, 2010 and 2009:

TRANSPORTADORA DE GAS DEL SUR S.A.

**NOTES TO THE CONSOLIDATED FINANCIAL STATEMENTS
FOR THE YEARS ENDED DECEMBER 31, 2010, 2009 AND 2008**

(Amounts stated in thousands of Argentine pesos as described in Note 2.b.,
except for per share and per ADS amounts in Argentine pesos or unless otherwise indicated)

	2010		2009	
	Carrying amount	Fair value	Carrying amount	Fair value
	(in million of pesos)			
Long term debt	1,502	1,587	1,517	1,232

h) Disclosure of capital lease information

The Company leases telecommunication equipment under capital lease agreements with a lease term of 60 months. Following is a summary of the assets under capital leases:

	As of December 31, 2010
Original cost	23,152
Less:	
Accumulated depreciation	(18,842)
Net leased property	4,310

At December 31, 2010 all lease payments for the above assets under capital leases were made.

i) Earnings per share

In accordance with the disclosure requirements established by Argentine GAAP, the Company is required to disclose earnings per share information for each year for which a statement of income is presented. However, the information disclosed by the Company in its primary financial statements derives from figures calculated in accordance with the valuation criteria established by Argentine GAAP. Under US GAAP, basic and diluted earnings per share are presented in conformity with FASB ASC 260, Earnings per Share for all periods presented.

Basic earnings per share is computed by dividing the net income available to common shareholders for the period by the weighted average shares of common stock outstanding during the period. Diluted net income per share is computed by dividing the net income for the period by the weighted average number of common and dilutive potential common shares outstanding during the period.

Since the Company has no dilutive potential common stock outstanding, there are no dilutive earnings per share amounts as described in FASB ASC 260.

j) Statement of cash flows classification differences

The statements of cash flows presented in the primary financial statements are prepared based on Argentine GAAP amounts.

Under Argentine GAAP, the Company considers all short-term, highly liquid investments that are readily convertible to known amounts of cash and with original maturities of three months or less to be cash equivalents. Under Argentine GAAP, mutual funds are considered to be cash equivalents since original maturity is determined by reference to the frequency with which liquidity is available according to current Argentine GAAP guidance and practice. However, under FASB ASC 230, Statement of Cash Flow, the original maturity is determined by reference to the stated term of the security or the timeframe for exercising any put features to the issuer, not by reference to the frequency with which liquidity may be available through an auction, a put feature to a third party, or otherwise.

TRANSPORTADORA DE GAS DEL SUR S.A.

**NOTES TO THE CONSOLIDATED FINANCIAL STATEMENTS
FOR THE YEARS ENDED DECEMBER 31, 2010, 2009 AND 2008**

(Amounts stated in thousands of Argentine pesos as described in Note 2.b.,
except for per share and per ADS amounts in Argentine pesos or unless otherwise indicated)

As a result, differences exist between the total amount of the increase or decrease in cash and cash equivalents reported in the primary financial statements and the same totals that would be reported in a statement of cash flows prepared based on US GAAP amounts.

Under US GAAP, the total amounts of cash and cash equivalents at the beginning and end of the years shown in the statement of cash flows are required to be the same amounts as similarly titled line items shown in the balance sheets as of those dates. The following table reconciles the material differences between the cash and cash equivalents at the end of each year as measured under Argentine GAAP and US GAAP:

	2010	2009	2008
Cash and cash equivalents at the end of the year under Argentine GAAP (Note 5)	1,089,480	1,025,142	604,690
Mutual funds investments	(80,066)	(52,693)	(34,101)
Cash and cash equivalents at the end of the year under US GAAP	1,009,414	972,449	570,589

In addition, differences exist between cash flows from operating, investing and financing activities reported in the primary financial statements and the cash flows from operating, investing and financing activities that would be reported under FASB ASC 230.

Under Argentine GAAP, advance payments from customers were reported as financing activities whereas these transactions would be classified as cash flows from operating activities for US GAAP purposes. Additionally, due to the difference in the definition of cash and cash equivalents, cash flows from purchasing and selling of mutual funds would be reported as cash flows from operating activities under US GAAP.

In addition, under Argentine GAAP the effect of inflation and exchange rate changes on cash and cash equivalents were not disclosed by presenting a fourth cash flow statement category as required by US GAAP.

The following tables reconcile the material differences in the cash flow statement as measured under Argentine GAAP with the cash flows as measured under US GAAP:

	2010	2009	2008
Cash flows provided by operating activities under Argentine GAAP	320,510	511,637	582,081
Effect of foreign exchange rate changes on cash and cash equivalents	(26,307)	(51,964)	(36,094)
(Increase) / decrease in investments other than cash and cash equivalents under US GAAP	(27,373)	(18,592)	84,125
Increase in advance payments from customers	-	113,459	47,183
Cash flows provided by operating activities under US GAAP	266,830	554,540	677,295
Cash flows used in investing activities under Argentine GAAP	(142,844)	(149,147)	(192,406)
Cash flows used in investing activities under US GAAP	(142,844)	(149,147)	(192,406)
Cash flows (used in) / provided by financing activities under Argentine GAAP	(113,328)	57,962	(176,303)
Decrease in advance payments from customers	-	(113,459)	(47,183)
Cash flows used in financing activities under US GAAP	(113,328)	(55,497)	(223,486)
Increase in cash and cash equivalents under US GAAP	10,658	349,896	261,403
Effect of foreign exchange rate changes on cash and cash equivalents	26,307	51,964	36,094
Increase in cash and cash equivalents under US GAAP after effect of foreign exchange rate changes on cash and cash equivalents	36,965	401,860	297,497
Cash and cash equivalents at the beginning of the year	972,449	570,589	273,092
Cash and cash equivalents at the end of the year	1,009,414	972,449	570,589

TRANSPORTADORA DE GAS DEL SUR S.A.

**NOTES TO THE CONSOLIDATED FINANCIAL STATEMENTS
FOR THE YEARS ENDED DECEMBER 31, 2010, 2009 AND 2008**

(Amounts stated in thousands of Argentine pesos as described in Note 2.b.,
except for per share and per ADS amounts in Argentine pesos or unless otherwise indicated)

k) Capitalization of interest cost

Details regarding the amount of the total interest and the effect of capitalized interest for the years ended December 31, 2010, 2009 and 2008 are as follows:

	December 31,		
	2010	2009	2008
Total interest under US GAAP	135,498	155,002	143,897
- Capitalized interest under US GAAP	(6,691)	(3,586)	(2,953)
Total Interest charged to net income under US GAAP	128,807	151,416	140,944

l) Disclosure of revenues

Revenues generated by the current tariffs from the additional transportation capacity associated with the pipeline capacity expansions completed in August 2005 under the Gas Trust Fund Program framework are reported on a net basis. Pursuant to FASB ASC 605, Revenue Recognition, the Company serves as an agent because the Company's revenue generation is 80% of the total amounts billed to its clients and the remaining 20% is earned by the gas trust (representing Ps. 5.7 million for each of the fiscal years ended December 31, 2010, 2009 and 2008), with both of the parties bearing proportionally the risk of loss.

m) Receivables (ASC 310)

In July 2010, the FASB issued ASU 2010-20 "Disclosures about the Credit Quality of Financing Receivables and the Allowance for Credit Losses", which became effective with the Company's reporting at December 31, 2010. This standard amends and expands disclosure requirements about the credit quality of financing receivables and the related allowance for credit losses. As a result of these amendments, companies are required to disaggregate, by portfolio segment or class of financing receivables, certain existing disclosures and provide certain new disclosures about financing receivables and related allowance for credit losses. Adoption of the standard did not have an impact on the Company's existing disclosures.

n) Accounting pronouncements issued but not yet adopted

1. *Accounting Standards Update No. 2010-17 "Revenue Recognition-Milestone Method (Topic 605): Milestone Method of Revenue Recognition- A Consensus of the FASB Emerging Issues Task Force) ("ASU 2010-17")*

In April 2010, the FASB issued ASU 2010-17, Revenue Recognition—Milestone Method (Topic 605): Milestone Method of Revenue Recognition. This ASU codifies the consensus reached in EITF Issue No. 08-9, "Milestone Method of Revenue Recognition." The amendments to the Codification provide guidance on defining a milestone and determining when it may be appropriate to apply the milestone method of revenue recognition for research or development transactions. Consideration that is contingent on achievement of a milestone in its entirety may be recognized as revenue in the period in which the milestone is achieved only if the milestone is judged to meet certain criteria to be considered substantive. Milestones should be considered substantive in their entirety and may not be bifurcated. An arrangement may contain both substantive and nonsubstantive milestones, and each milestone should be evaluated individually to determine if it is substantive. ASU 2010-17 is effective on a prospective basis for milestones achieved in fiscal years, and interim periods within those years, beginning on or after June 15, 2010. Early adoption is permitted. The Company does not expect the provisions of ASU 2010-17 to have a material effect on the consolidated financial statements.
