Rising volumes, constrained infrastructure, and export opportunities make this the right time for tgs to develop Argentina's NGL value chain

- **Unlocks Vaca Muerta growth** by removing associated-gas processing constraints.
- **Captures higher value** through the recovery of higher-priced NGLs.
- **Supports Argentina's export strategy** and aligns with the RIGI framework.
- **Leverages favorable LPG markets** to expand exports and strengthen integration into global NGL and petrochemical value chains.

PRODUCERS

1. Production
Gas is produced and delivered into the **tgs'** Vaca Muerta gas gathering system.

tgs & pgs

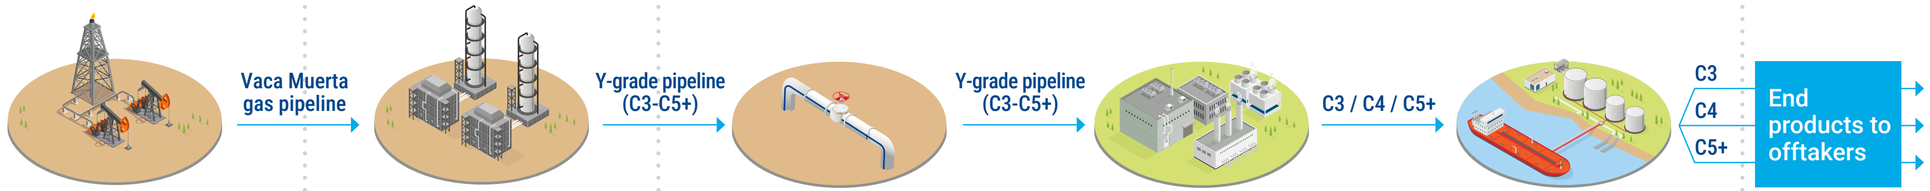

2. Gathering, Conditioning and Processing
Gas is gathered, cleaned, and dried, with C3, C4 and C5+ stripped from the rich gas stream, into a single Y-grade liquid stream.

mgs

3. Y-grade Transportation
Y-grade stream (C3-C5+) is sent via the dedicated pipeline from Tratayén to Bahía Blanca.

4. Fractionation
Y-grade mix is split into C3, C4, and C5+ purity / specification products.

5. Storage and Export
Each product goes to its own storage tanks and is then exported by ship. MGS transfers to producers price risk (netback agreement).
